

Schuyler Heim Bridge Replacement and SR-47 Expressway Project

Final Environmental Impact Statement/ Environmental Impact Report and Section 4(f) Evaluation

Commodore Schuyler Heim Bridge (Br. No. 53-2618) and SR-47 in the Ports of
Long Beach and Los Angeles, Los Angeles County, California

07-LA-47-KP 4.4/9.3 (PM 2.7/5.8)

EA: 238500

The environmental review, consultation, and any other action required in accordance with applicable federal laws for this project are being, or have been, carried out by Caltrans under its assumption of responsibility pursuant to 23 U.S.C. 327.

- L Memorandum of Agreement
- M Final EIS/EIR Acronyms and Abbreviations
- N UC Davis HRA Review
- O Conformity Redetermination

APPENDIX A CEQA Environmental Checklist Form

The CEQA checklist identifies the impacts of the alternatives for the proposed Schuyler Heim Bridge Replacement and SR-47 Expressway Project. In most cases, technical studies determined the impacts of each environmental resource for each alternative of the proposed project. Further supporting documentation is provided in Chapter 3.0 of this Environmental Impact Statement/ Environmental Impact Report, where impacts, plus feasible avoidance, minimization, and/or mitigation measures are discussed for each environmental resource addressed. The indicated impact determination is based upon the worst-case alternative.

1. Project title:
Schuyler Heim Bridge Replacement and SR-47 Expressway Project

2. Lead agency name and address:
California Department of Transportation, District 7
100 South Main Street
Los Angeles, CA 90012

3. Contact person and phone number:
Karl Price (213) 897-1839

4. Project location:
Terminal Island and Commodore Schuyler F. Heim Bridge within the Ports of Long Beach and
Los Angeles; SR-47 and SR-103 from Terminal Island generally to I-405

5. Project sponsor's name and address:
Alameda Corridor Transportation Authority
One Civic Plaza, Suite 350
Carson, CA 91745

6. General plan designation: Industrial; Transportation & Utilities 7. Zoning: _____

8. Description of project: (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary.)
The lead agency and project sponsor propose to replace the seismically deficient Schuyler Heim
Bridge, construct an elevated four-lane expressway between Ocean Boulevard and Alameda Street
just south of Pacific Coast Highway (SR-1), and construct a flyover from eastbound Ocean Boulevard
to SR-47 at the Schuyler Heim Bridge.

9. Surrounding land uses and setting: Briefly describe the project's surroundings:
The study area is highly developed, with heavy industrial, commercial, transportation, and some
recreational uses. Some residential uses occur to the west of Alternative 1, and east of Alternative 2.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.)
FHWA, USCG, ACOE, USFWS, California Coastal Commission, CDFG, RWQCB, City of
Los Angeles, City of Long Beach, County of Los Angeles

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|--|--|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture Resources | <input checked="" type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input checked="" type="checkbox"/> Cultural Resources | <input type="checkbox"/> Geology /Soils |
| <input type="checkbox"/> Hazards & Hazardous Materials | <input type="checkbox"/> Hydrology / Water Quality | <input type="checkbox"/> Land Use / Planning |
| <input type="checkbox"/> Mineral Resources | <input checked="" type="checkbox"/> Noise | <input type="checkbox"/> Population / Housing |
| <input type="checkbox"/> Public Services | <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation/Traffic |
| <input type="checkbox"/> Utilities / Service Systems | <input checked="" type="checkbox"/> Mandatory Findings of Significance | |

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, “Earlier Analyses,” may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
 - a) the significance criteria or threshold, if any, used to evaluate each question; and
 - b) the mitigation measure identified, if any, to reduce the impact to less than significance

ISSUE CHECKLIST:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
I. AESTHETICS – Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
II. AGRICULTURE RESOURCES – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
IV. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in ' 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to ' 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
VI. GEOLOGY AND SOILS – Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
VII. HAZARDS AND HAZARDOUS MATERIALS				
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
VIII. HYDROLOGY AND WATER QUALITY –				
Would the project:				
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j) Inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
IX. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
X. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XI. NOISE – Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
XII. POPULATION AND HOUSING – Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XIII. PUBLIC SERVICES				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XIV. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XV. TRANSPORTATION/TRAFFIC – Would the project:				
a) Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XVI. UTILITIES AND SERVICE SYSTEMS –				
Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Comply with federal, state, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

XVII. MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

1.0 Section 4(f) Evaluation

1.1 Application of Section 4(f)

1.1.1 Introduction

Section 4(f) of the Department of Transportation Act of 1966, codified at 49 USC Section 303, declares that “[i]t is the policy of the United States Government that special effort should be made to preserve the natural beauty of the countryside and public park and recreation lands, wildlife and waterfowl refuges, and historic sites.”

Section 4(f) specifies that

[t]he Secretary [of Transportation] may approve a transportation program or project requiring the use of publicly owned land of a public park, recreation area, or wildlife and waterfowl refuge of national, state, or local significance, or land of an historic site of national, state, or local significance (as determined by the federal, state, or local officials having jurisdiction over the park, area, refuge or site) only if

- (1) there is no prudent and feasible alternative to using that land; and
- (2) the program or project includes all possible planning to minimize harm to the park, recreation area, wildlife and waterfowl refuge, or historic site resulting from the use.

Section 4(f) further requires consultation with the Department of Interior and, as appropriate, the involved offices of the Department of Agriculture and the Department of Housing and Urban Development, and relevant state and local officials, in developing transportation projects and programs that use lands protected by Section 4(f).

The proposed Schuyler Heim Bridge Replacement and State Route (SR)-47 Expressway Project (proposed project) alternatives, as described in Chapter 2.0, are a transportation project that may receive federal funding and/or discretionary approvals through the U.S. Department of Transportation (i.e., FHWA [Federal Highway Administration]); therefore, documentation of compliance with Section 4(f) is required.

This Section 4(f) evaluation has been prepared in accordance with the joint FHWA/ Federal Transit Administration (FTA) regulations for Section 4(f) compliance codified at 23 CFR Section 771.135. Additional guidance has been obtained from the FHWA Technical Advisory T 6640.8A (1987) and the revised FHWA Section 4(f) Policy Paper (2005).

1.1.2 Section 4(f) “Use”

As defined in 23 CFR Section 771.135(p), the “use” of a protected Section 4(f) resource occurs when any of the following conditions are met:

- Land is permanently incorporated into a transportation facility through partial or full acquisition (i.e., “direct use”).

- There is a temporary occupancy of land that is adverse in terms of the preservationist purposes of Section 4(f).
- There is no permanent incorporation of land, but the proximity of a transportation facility results in impacts so severe that the protected activities, features, or attributes that qualify a resource for protection under Section 4(f) are substantially impaired (i.e., “constructive use”).

Direct Use

A direct use of a Section 4(f) resource takes place when property is permanently incorporated into a proposed transportation project (23 CFR Section 771.135[p][1]). This may occur as a result of partial or full acquisition of a fee simple interest, permanent easements, or temporary easements that exceed regulatory limits noted below (23 CFR Section 771.135[p][7]).

Temporary Occupancy

A temporary occupancy of a Section 4(f) resource occurs when the temporary occupancy is considered adverse in terms of the preservationist purposes of the Section 4(f) statute. Under the FTA/FHWA regulations (23 CFR Section 771.135[p][7]), a temporary occupancy of property does not constitute a use of a Section 4(f) resource when the following conditions are satisfied:

- The occupancy is of temporary duration (i.e., shorter than the period of construction) and not involve a change in ownership of the property.
- The scope of work is minor, with only minimal changes to the protected resource.
- There are no permanent adverse physical effects on the protected resource, and there will be no temporary or permanent interference with the activities or purpose of the resource.
- The property being used will be fully restored to a condition that is at least as good as that which existed prior to the proposed project.
- There is documented agreement of the appropriate officials having jurisdiction over the resource regarding the foregoing requirements.

Constructive Use

A constructive use of a Section 4(f) resource happens when a transportation project does not permanently incorporate land from the resource, but the proximity of the project results in impacts (e.g., noise, vibration, visual, access, and/or ecological impacts) so severe that the protected activities, features, or attributes that qualify the resource for protection under Section 4(f) are substantially impaired (23 CFR Section 771.135[p][2]). Substantial impairment occurs only if the protected activities, features, or attributes of the resource are substantially diminished.

This determination is made through the following practices:

- Identification of the current activities, features, or attributes of the resource that may be sensitive to proximity impacts.
- Analysis of the potential proximity impacts on the resource.

- Consultation with the appropriate officials having jurisdiction over the resource (23 CFR Section 771.135[p][6]).

1.2 Purpose and Need

The Federal Highway Administration (FHWA) and Caltrans identified the existing Schuyler Heim Bridge as not conforming to the current seismic criteria. Concurrently, the Alameda Corridor Transportation Authority confirmed the existing SR-47/SR-103 facilities do not comply with the State's Seismic Design Criteria or adequately serve as a high-capacity alternative route to SR-110 and SR-710 due to numerous at-grade railroad crossings and traffic signals.

The purpose of the proposed project is to: 1) provide a structurally and seismically safe vehicular connection between Terminal Island and the mainland that could remain in service following a major earthquake; and 2) provide a high-capacity alternative route between Terminal Island and I-405. The project includes replacement of the existing Schuyler Heim Bridge (lift-bridge) with a fixed-span bridge. The project is needed to provide for uninterrupted transport of people, freight, and goods between Terminal Island and the mainland after a major earthquake, and to improve safety and relieve congestion on the local street network.

1.3 Proposed Action

1.3.1 Description

The proposed project is to improve traffic conditions between Terminal Island, which is located within the Ports of Long Beach and Los Angeles, and major traffic arterials on the mainland to the north, primarily within the Cities of Long Beach and Los Angeles. The Commodore Schuyler F. Heim Bridge (Schuyler Heim Bridge) (Bridge No. 53-2618) is a major traffic route that connects Terminal Island within the Ports of Long Beach and Los Angeles to the mainland cities of Long Beach and Los Angeles. The bridge is owned by the California Department of Transportation (Caltrans) and is located within the City of Los Angeles and through property owned by the Port of Long Beach. The bridge spans the Cerritos Channel, through which ships serving both the Port of Los Angeles and Port of Long Beach pass. Six alternatives have been proposed for analysis in an Environmental Impact Statement/Environmental Impact Report (EIS/EIR) for the proposed project. There are four build alternatives, one Transportation System Management (TSM) alternative, and one No-Build alternative. These alternatives are described below. The four build alternatives are shown in Figure 1.

Alternative 1: Bridge Replacement and Expressway

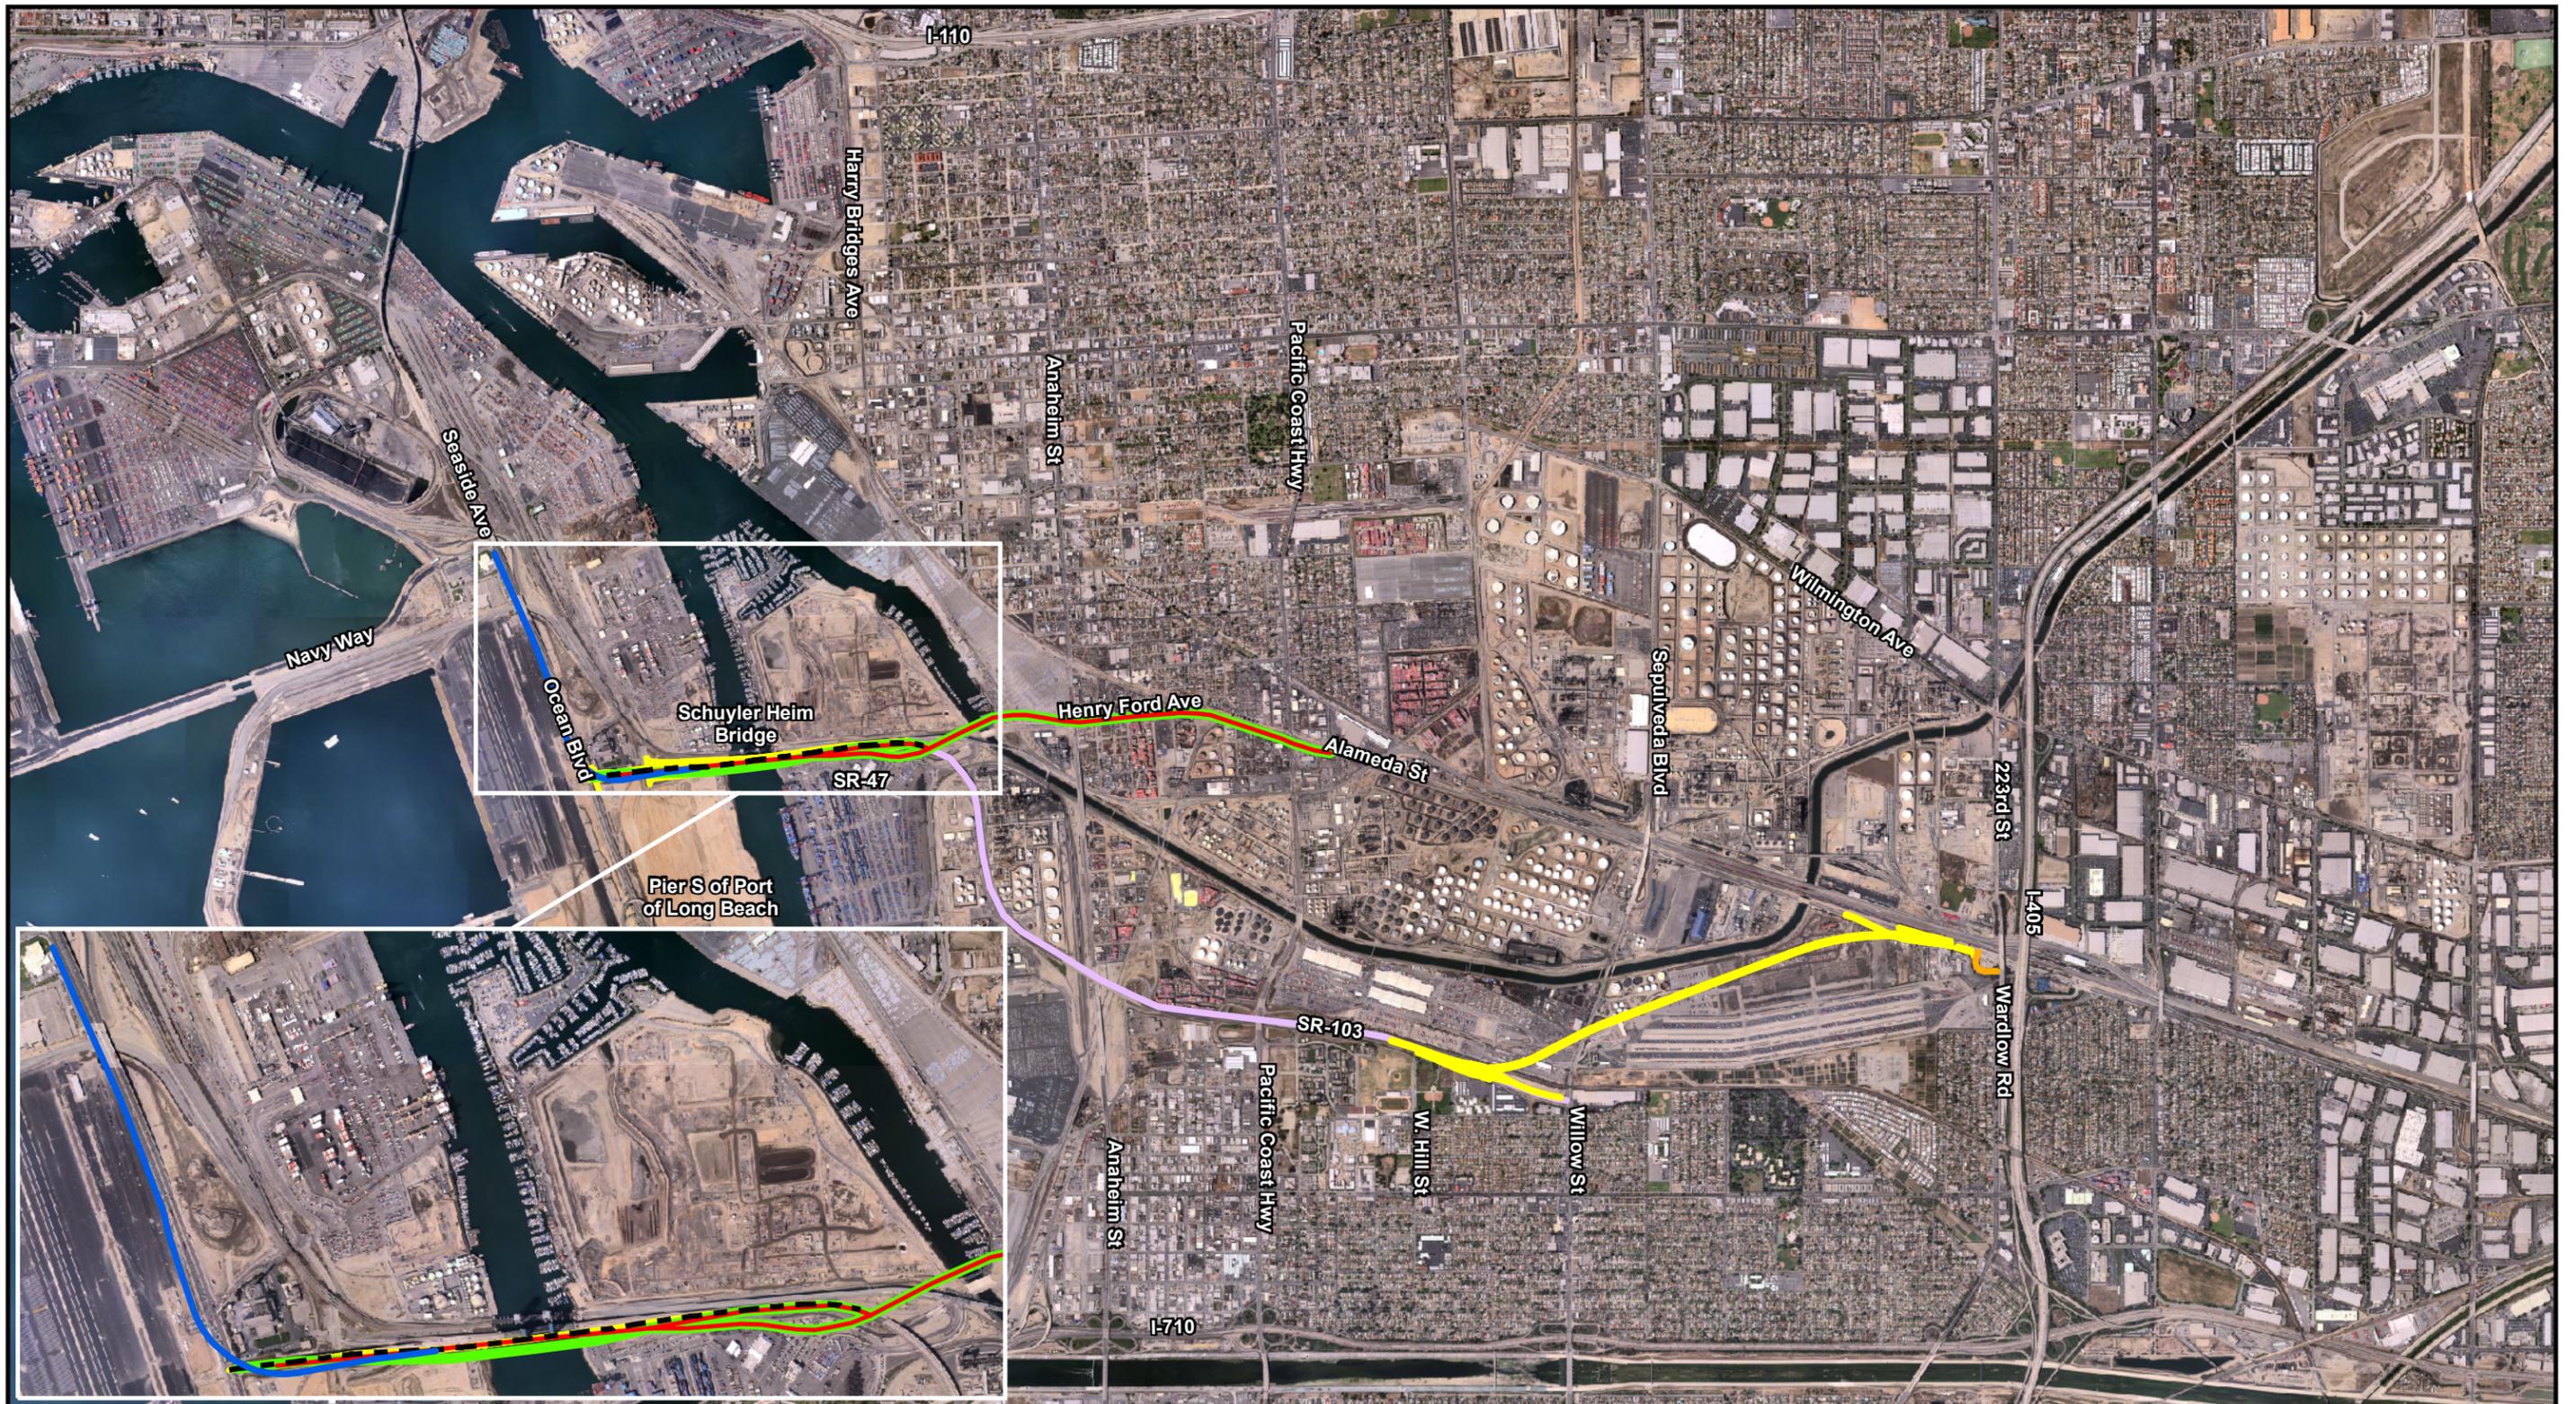

Alternative 1 would replace the existing Schuyler Heim Bridge (lift bridge) (built in 1946-1948) in order to meet current seismic criteria. The bridge would provide a route linking Terminal Island to the mainland and would be designed to remain in service and ensure ground and vessel transportation is possible immediately following a major earthquake. Alternative 1 would include a new SR-47 Expressway to provide a high-capacity alternative route along the Alameda Corridor for traffic between Terminal Island and Alameda Street,

at Pacific Coast Highway, as well as improvements to the Alameda Street/Wardlow Road connector ramp. In addition, Alternative 1 would provide the Ocean Boulevard/SR-47 Flyover (flyover) on Terminal Island. The flyover will be a two-lane, elevated structure to divert traffic bound for northbound SR-47 directly onto the new bridge from eastbound Ocean Boulevard. This traffic then would be able to avoid the signalized Ocean Boulevard/SR-47 intersection.

With this alternative, the new fixed-span bridge would be constructed, primarily within the existing bridge right-of-way (ROW) (Caltrans Highway Easement [HE(C)]), but toward the east to avoid impacts to the railroad on the Badger Avenue Bridge, which is immediately west of the existing bridge.

The replacement bridge would be slightly wider (13 m [43 ft]) than the existing bridge due to the addition of standard shoulders, which are not present on the existing bridge. The replacement bridge would include three 3.6-m (12-ft) traffic lanes (two through-lanes and one auxiliary lane), and 3-m (10-ft) shoulders in the northbound direction, and four 3.6-m (12-ft) lanes (three through-lanes and one auxiliary lane), and 3-m (10-ft) shoulders in the southbound direction. Construction of the replacement bridge would include a southbound off-ramp and northbound on-ramp at New Dock Street on Terminal Island, as well as a northbound off-ramp and southbound on-ramp at Henry Ford Avenue on the mainland side of the bridge. With this alternative, the new bridge would be supported by four piers in the channel, with a minimum vertical clearance of 14.3 m (47 ft) over the mean high water level (MHWL). The existing navigable width of the channel is 54.9 m (180 ft), and would not change under this alternative. The navigable width is directly tied to the navigable width (54.9 m [180 ft]) of the Badger Avenue Bridge (rail) located immediately west of the Schuyler Heim Bridge.

The southern end of the new SR-47 Expressway would begin on Terminal Island, at the intersection of SR-47 and Ocean Boulevard, and extend north over New Dock Street and onto the replacement bridge. The expressway would extend northward to Alameda Street, at the intersection with Pacific Coast Highway, a distance of approximately 2.7 kilometers (km) (1.7 miles [mi]). The expressway would be a four-lane, limited access roadway. It would provide grade-separation at five at-grade railroad crossings and three signalized intersections along its length. A segment of the expressway would be constructed as an elevated roadway (viaduct) over Henry Ford Avenue and Alameda Street and return to grade at Alameda Street, just south of Pacific Coast Highway. Under this alternative, the current connectivity to SR-103 would be maintained. This alternative includes improvements to the Alameda Street/Wardlow Road connector and to Alameda Street north and south of the connector.

LEGEND

- Alternative 1: Bridge Replacement and SR-47 Expressway
- Alternative 2: SR-103 Extension
- Alternative 3: Bridge Avoidance
- - - Alternative 4: Bridge Replacement Only

- Ocean Boulevard/SR-47 Flyover
- Existing SR-103

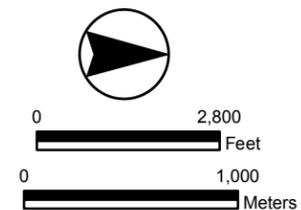

Figure 1
Build Alternatives
 Schuyler Heim Bridge Replacement
 and SR-47 Expressway

Aerial Date: May 2002

Note: Project components not to scale

Alternative 1A: Haunch Bridge Design

Alternative 1A is a structural variation of Alternative 1. The main purpose of this alternative is to improve the aesthetic appearance of the replacement bridge over the Cerritos Channel and to span a greater horizontal distance across the channel between columns. This is accomplished by increasing the span lengths over the channel and arching the superstructure soffits (the bottom of the bridge structure). Under this alternative, the new bridge would be supported by two piers (four columns) in the Cerritos Channel, compared to four piers (eight columns) under Alternative 1; and the minimum vertical clearance between the piers would be of 14.3 m (47 ft).

With this alternative, the new bridge would be supported by two piers in the channel, with a minimum vertical clearance of 14.3 m (47 ft) over the MHWL. The existing navigable width of the channel is 54.9 m (180 ft), and would not change under this alternative. The navigable width is directly tied to the navigable width (54.9 m [180 ft]) of the Badger Avenue Bridge (rail) located immediately west of the Schuyler Heim Bridge.

Other aspects of this alternative would be the same as Alternative 1.

Alternative 2: SR-103 Extension to Alameda Street

With this alternative, just as in Alternative 1, a new fixed-span bridge would be constructed, and the existing Schuyler Heim Bridge would be subsequently demolished. Additionally, modifications to the northbound and southbound approaches to the bridge would be constructed. Similar to Alternative 1, a new southbound off-ramp and northbound on-ramp at New Dock Street on Terminal Island would be constructed. This alternative would include the flyover and also would extend SR-103 from south of West Hill Street to the northwest on a four-lane viaduct to join Alameda Street between Sepulveda Boulevard and I-405. Improvements to SR-103 would begin approximately 3.2 km (2 mi) north of the Schuyler Heim Bridge and extend a distance of approximately 2.6 km (1.6 mi). The viaduct would cross over the Union Pacific Railroad manual yard and San Pedro Branch line, through the Southern California Edison (SCE) utility corridor, across the Los Angeles Harbor Department Warehouse 16/17 area, and over Sepulveda Boulevard, then turn parallel to the western boundary of the Intermodal Container Transfer Facility (ICTF) to the centerline of Alameda Street. The viaduct would return to grade south of the Wardlow Road ramps to I-405. Improvements would be made to the existing SR-103 to accommodate the southerly end connection of the viaduct and to SR-47 to accommodate the northerly end connection of the viaduct. This alternative also includes widening the Alameda Street/Wardlow Road connector and improvements to Alameda Street north and south of the connector.

Alternative 3: Bridge Avoidance

This alternative was developed specifically as a potential avoidance alternative for the purpose of Section 4(f) analysis. It was conceived to preserve the existing Schuyler Heim Bridge following construction of a new fixed-span bridge on an alignment east of the existing bridge. The Schuyler Heim Bridge would be seismically retrofitted before construction of the new bridge; however, the approaches of the old bridge would be demolished and the old Schuyler Heim Bridge would no longer be used for transportation purposes once the new span goes into operation. The retrofit would be for safety purposes, to avoid demolition of a historic resource and ensure that the existing bridge would not collapse and result in safety

hazards or damage to the new bridge or to the adjacent Badger Avenue Bridge. Under this alternative, the new bridge would have the same lane configuration as the replacement bridge for Alternative 1.

Other aspects of this alternative would be the same as Alternative 1.

The existing bridge may be required to be demolished to comply with U.S. Coast Guard permit requirements. In preliminary consultations held in December 2005, the U.S. Coast Guard stated that the bridge would not be allowed to remain in place if not used for transportation purposes. They further indicated that their permit to construct a replacement bridge would include a requirement for subsequent demolition of the Schuyler Heim Bridge.

Alternative 4: Bridge Replacement Only

This alternative would replace the existing Schuyler Heim Bridge with a fixed-span bridge, largely along the existing bridge alignment, as described under Alternative 1. With this alternative, the flyover would not be constructed, and no roadway improvements would occur. Therefore, the SR-47 Expressway described in Alternative 1 would not be constructed, the SR-103 extension to Alameda Street described in Alternative 2 would not be constructed, and there would be no improvements to the Alameda Street/Wardlow Road connector ramp.

Alternative 5: Transportation System Management

This alternative is designed to identify low-cost, easily implemented improvements as an alternative to construction of more expensive improvements. For this project, the TSM alternative focuses on improvements to routes that parallel the proposed SR-47 Expressway, and that serve the same trips. These trips include trucking drayage trips to and from the ICTF, and trips destined to and from the ports via Alameda Street, Henry Ford Avenue, and SR-47. The TSM alternative would include measures to improve capacity and traffic circulation at the Port of Long Beach and Port of Los Angeles through policy changes and use of the latest technologies. With this alternative, capital investment would be minimal compared to the previous alternatives addressed.

The TSM alternative for this project includes the following key elements:

- **Intelligent Transportation Systems (ITS):** Systems applications in and around the Port area, with special emphasis on truck movements. These include measures to improve traffic circulation through traffic control, incident management, traffic surveillance, and traffic information dissemination with the aid of intelligent transportation system devices and systems.
- **Lower-cost roadway and intersection improvements:** Measures include restriping to provide additional turn lanes and acceleration lanes and traffic signalization improvements, primarily within existing ROWs.
- **Minor roadway widening:** There also could be peak-hour parking prohibitions to remove midblock bottlenecks along selected roadways.

Alternative 6: No Build

Under this alternative there would be no changes to the existing Schuyler Heim Bridge or local roadway system. The existing Schuyler Heim Bridge would continue to be seismically

inadequate and subject to damage or collapse under strong seismic conditions. Maintenance activities would continue and would include application of protective coatings; lift mechanism repairs; deck resurfacing; and other, maintenance activities. The existing SR-47 roadway would function with current and increasing levels of congestion.

1.4 Description of Section 4(f) Resources

As noted above, properties subject to Section 4(f) consideration include publicly owned lands of a public park/recreation area; a wildlife and waterfowl refuge of national, state, or local significance; or a historic site of national, state, or local significance, whether publicly or privately owned. Only those resources within about 0.4 km (0.25 mi) of the proposed project alternatives have been identified as being potentially affected by project impacts and thus subject to detailed Section 4(f) evaluation. These include three parks and recreational areas: Hudson Park, Hudson Elementary School, and Cabrillo High School. One historic resource is also identified: the Schuyler Heim Bridge. Three other parks are within 0.8 km (0.5 mi) of the project alternatives, but have no potential to be affected. These are: Admiral Kidd Park, East Wilmington Park, and the East Wilmington Greenbelt. No other significant historic resources were identified within 0.5 mile of the project.

As described more fully below, the Section 4(f) resources in the vicinity of the proposed project alternatives are limited to publicly owned parks/recreation areas and one significant historic site. Figure 2 illustrates the location of these Section 4(f) resources. There are no significant wildlife or waterfowl refuges in the proposed project area.

1.4.1 Public Parks and Recreation Areas with No Potential 4(f) Use

Three parks (Admiral Kidd Park, East Wilmington Park, and East Wilmington Greenbelt) are over 0.4 km (0.25 mi) from the site and are buffered from the project alternatives by distance (i.e., about 1,000 feet) and the presence of intervening structures. There is no reasonable likelihood that any direct, temporary, or constructive use would occur.

1.4.2 Public Parks and Recreation Areas with Potential 4(f) Use

One public park and two public schools where playgrounds/athletic fields are used for public recreation (Hudson Park, Hudson Elementary School, Cabrillo High School) have been identified within about 0.4 km (0.25 mi) of the project alternatives. These three properties are immediately adjacent to the Alternative 2 alignment. Table 1 provides a summary listing of these resources. Detailed descriptions are provided in Section 1.5 - Effects on Section 4(f) Resources.

TABLE 1
Section 4(f) Resources – Public Parks and Recreation Areas

2	Hudson Elementary School (Playground/Athletic Fields)	2335 Webster Ave. Long Beach
3	Cabrillo High School (Playground/Athletic Fields)	2001 Santa Fe Ave. Long Beach

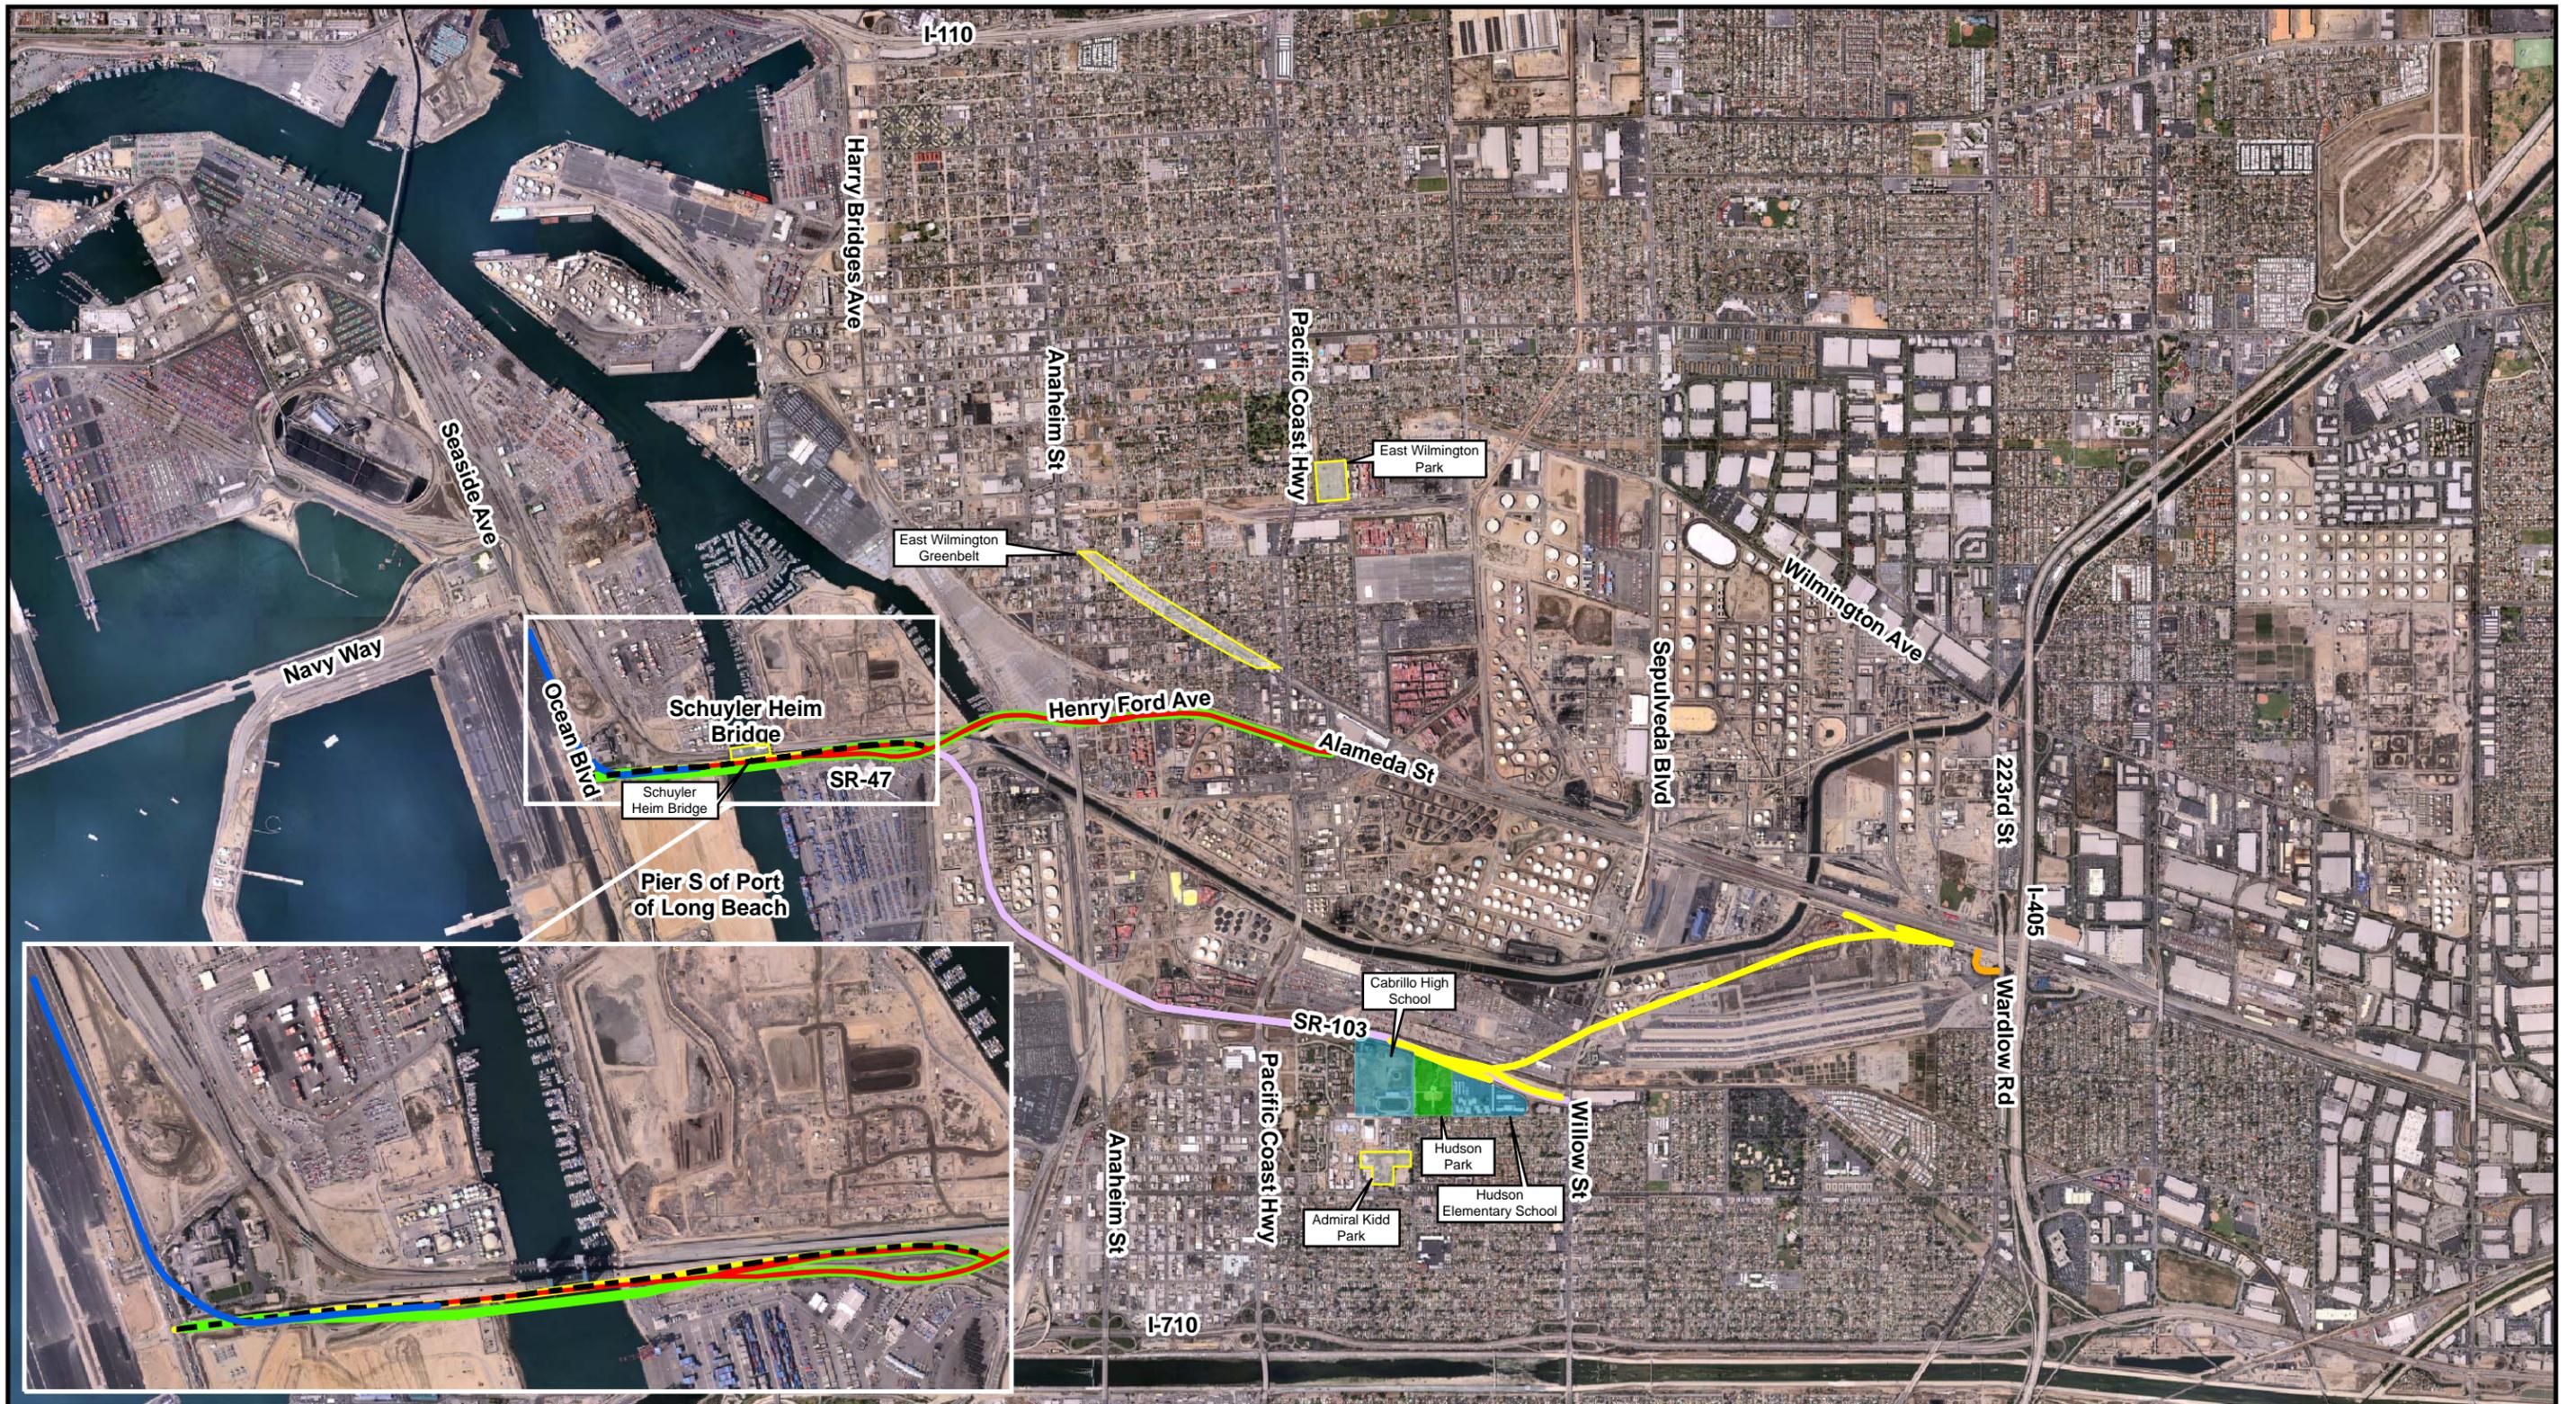

Source: Jones & Stokes, 2006.

1.4.3 Historic Sites

A total of 38 historic sites have been identified in the Area of Potential Effects (APE) for the proposed project alternatives. All of these sites are architectural resources. No prehistoric or historical archeological resources were identified within or adjacent to the APE. In accordance with FTA/FHWA regulations, Section 4(f) requirements are only applicable to *significant* historic sites (i.e., those sites on or eligible for the National Register of Historic Places [NRHP], or sites otherwise determined significant by the FHWA Administrator) (23 CFR Section 771.135[e]). Table 2 provides a summary of the characteristics of each historic site identified within the APE, along with a determination of which of these sites has been determined significant for Section 4(f) purposes (pending completion of Section 106 determinations of eligibility, and concurrence by State Historic Preservation Office (SHPO). A detailed description of the one significant historic site in the APE (the Schuyler Heim Bridge) is provided in Section 1.5 – Effects on Section 4(f) Resources.

1.5 Effects on Section 4(f) Resources

The following sections describe how the proposed project alternatives would affect Section 4(f) resources. A summary of potential effects is provided below in Table 3; additional analysis follows for each affected resource. This includes whether any permanent or temporary occupation of a property would occur, or whether the proximity of the project would cause any access disruption, noise, vibration, or aesthetic effects that would substantially impair the features or attributes that qualify the resource for protection under Section 4(f).

1.5.1 Public Parks and Recreation Areas

The discussion of Hudson Park, the Hudson Elementary School Playground/ Athletic Field, and Cabrillo High School playground/athletic field is pertinent only to Alternative 2, which involves extension of SR-103. Alternatives 1, 1A, 3, 4, 5, and 6 do not propose improvements in the proximity of park/recreation areas. (Please see Figure 2 for location of alternatives and the park/recreation areas.)

1.5.1.1 Hudson Park

Description and Significance of Property

Type/Location/Size

Hudson Park occupies 13.06 acres at 2335 Webster Avenue in the City of Long Beach. The west side of the park is adjacent to SR-103.

Access/Facilities/Usage

Vehicular and pedestrian access to Hudson Park is from Webster Avenue. The facilities include two baseball fields, one soccer field, a picnic area, and play equipment. The park is used for active recreation and is popular for adult sports leagues.

Relationship to Similar Facilities in the Area

Hudson Park is located immediately south of the playground and athletic fields at Hudson Elementary School.

Ownership/Jurisdiction

Hudson Park is owned by, and subject to the jurisdiction of, the City of Long Beach.

Significance

Hudson Park is a City of Long Beach park and recreational resource.

Application of Section 4(f) Criteria for Use**Direct Use**

The proposed project alternatives would not require any permanent use (property acquisition) of Hudson Park.

Temporary Occupancy

The proposed project alternatives would not require any temporary occupancy of Hudson Park.

Constructive Use

The proposed project alternatives 1, 3, 4, 5, and 6 would not impose constructive uses on Hudson Park.

Air Quality

Only Alternative 2 would have proximity impacts to air quality at Hudson Park. However, these impacts do not rise to the level of substantially impairing the activities. Please see Section 3.13, Air Quality, of the Final EIS/EIR.

Noise

Only Alternative 2 would affect this park. Alternative 2 would include construction of an elevated SR-103 expressway approximately 46 m (150 ft) from the west side of Hudson Park. The park is used for active sports and athletic sports activities that do not require quiet surroundings. Also, the existing park is located near a large industrial area; and a busy traffic corridor borders the western boundary of park. According to the noise study prepared for the project (Caltrans, February 2005), noise levels are expected to exceed the Noise Abatement Criteria (NAC) of 67 dBA in association with Alternative 2. Abatement measures, such as noise walls, have been proposed at locations where adverse impacts were identified. No noise impacts to park users were identified as a result of Alternative 2 after abatement.

Additional analysis is provided in the discussion of Noise (Section 3.14) of the Draft EIS/EIR for the proposed project.

Aesthetics

The analysis of aesthetic effects in the Draft Visual Impact Assessment prepared for the project reported that the extension of SR-103 to Alameda Street to the northwest as proposed under Alternative 2 would not result in a substantial adverse aesthetic effect at this park. Views to or from the park are not a feature or characteristic of the property.

However, under Alternative 2, the following measures would be implemented to enhance the aesthetics of the expressway along its entire length, including the portion of the expressway in the vicinity of Hudson Park.

- The surfaces of columns, roadway barriers, soundwalls, and gore points will receive surface color treatments at specified locations, as determined by a Caltrans Licensed Landscape Architect.

- Elements of the design of the proposed bridge and expressways, such as color, line, texture, and style, would be aesthetically pleasing and as unobtrusive as possible. During final design, particular attention would be paid to the vertical columns and soundwalls.
- All visual design elements, including landscaping, would be designed and implemented with the concurrence of the Caltrans landscape architect and in compliance with local policies and guidelines.
- Trees and vines will be planted along soundwalls at specified locations, as determined by a Caltrans Licensed Landscape Architect.
- Design of the elevated expressway would be compatible (scale and massing) with the existing Schuyler Heim Bridge or future bridge and the Badger Avenue/Henry Ford Railroad bridge.

Additional analysis is provided in the discussion of Visual Resources/Aesthetics (Section 3.7) of the Draft EIS/EIR for the proposed project.

Access

Alternative 2 would pass to the west of the park and would not affect vehicular or pedestrian access to the park. Access to the park is from the east via Webster Avenue.

Coordination/Consultation

Consultation has been initiated with the City of Long Beach. Consultation with the City of Long Beach is ongoing as part of the California Environmental Quality Act (CEQA) and NEPA process and is expected to continue throughout the duration of that process, as well as during the subsequent period of project design and construction. (Caltrans has sent a letter to the City of Long Beach Department of Parks, Recreation and Marine to initiate Section 4[f)] consultation for Hudson Park [Appendix A] and has received a response. Hudson Park has been found to be a significant recreation area by this Department and FHWA concurs with this finding.)

1.5.1.2 Hudson Elementary School Playground/Athletic Fields

Description and Significance of Property

Type/Location/Size

The Hudson Elementary School is located at 2335 Webster Avenue in the City of Long Beach. The west side of the playground and athletic fields is adjacent to SR-103.

Access/Facilities/Usage

Vehicular and pedestrian access to the Hudson Elementary School playground and athletic fields is from Webster Avenue. Facilities include two athletic fields. In addition, the school uses the athletic facilities at nearby Cabrillo School and the adjoining Hudson Park.

Relationship to Similar Facilities in the Area

The playground and athletic fields at Hudson Elementary School are adjacent to Hudson Park.

Ownership/Jurisdiction

The Hudson Elementary School playground and athletic fields are owned by, and subject to the jurisdiction of, the Long Beach Unified School District.

Significance

In a letter dated September 14, 2005, the Long Beach Unified School District stated that the athletic fields at both Hudson Elementary School and Cabrillo High School are significant publicly owned recreation areas, defined as having the function of a recreational area with the Park and Recreation objectives of the community (see Appendix A). Given that the Hudson School facilities are readily accessible to the general public during non-school hours, FHWA concurs with the district's position and has thus included the Hudson Elementary School in this Section 4(f) evaluation.

Application of Section 4(f) Criteria for Use**Direct Use**

The proposed project alternatives would not require any permanent use (acquisition) of the Hudson Elementary School property.

Temporary Occupancy

The proposed project alternatives are not anticipated to require any temporary occupancy of Hudson Elementary School. At present, a construction easement is not anticipated. Nonetheless, at the time of construction of Alternative 2 or construction of the associated noise wall (abatement measure), if short-term use of a very small portion of the school land were required, it would be for a short period of time, the scope of work would be minor, no temporary or permanent change in activities would occur, and the property would be returned to a condition as good as or better than at present. Therefore, it would not amount to a Use (as defined under Section 4[f]) of a recreational property.

Constructive Use

The proposed project alternatives would not impose any constructive use of the Hudson Elementary School playgrounds or athletic fields.

Air Quality

The proximity impacts to this playground would be minimal. Please see Section 3.13, Air Quality, of the FEIS/FEIR.

Noise

Alternative 2 would construct an elevated expressway approximately 46 m (150 ft) from the west side of Hudson Elementary School. The types of athletic activities (baseball, softball games, etc.) that take place at the school's athletic fields do not require quiet surroundings. Also, a large industrial area and a busy traffic corridor border the western boundary of the school property. According to the noise study prepared for the project (Caltrans, February 2005), noise levels are expected to exceed the NAC of 67 dBA in association with Alternative 2. Abatement measures, such as noise walls, have been proposed at locations where adverse impacts were identified. No noise impacts to park users were identified as a result of Alternative 2 after abatement.

Additional analysis is provided in the discussion of Noise (Section 3.14) of the Draft EIS/EIR for the proposed project.

Aesthetics

The analysis of aesthetic effects in the Draft Visual Impact Assessment prepared for the project finds that the extension of SR-103 to Alameda Street to the northwest as proposed under Alternative 2 would not result in a substantial adverse aesthetic effect at this location.

Alternative 2 would not have aesthetic effects that would substantially impair the protected activities, features, and attributes that qualify this resource for protection under Section 4(f).

However, under Alternative 2, the following measures would be implemented to enhance the aesthetics of the expressway along its entire length, including the portion of the expressway in the vicinity of Hudson Elementary School Playground/Athletic Fields.

- The surfaces of columns, roadway barriers, soundwalls, and gore points will receive surface color treatments at specified locations, as determined by a Caltrans Licensed Landscape Architect.
- Elements of the design of the proposed bridge and expressways, such as color, line, texture, and style, would be aesthetically pleasing and as unobtrusive as possible. During final design, particular attention would be paid to the vertical columns and soundwalls.
- All visual design elements, including landscaping, would be designed and implemented with the concurrence of the Caltrans landscape architect and in compliance with local policies and guidelines.
- Trees and vines will be planted along soundwalls at specified locations, as determined by a Caltrans Licensed Landscape Architect.
- Design of the elevated expressway would be compatible (scale and massing) with the existing Schuyler Heim Bridge or future bridge and the Badger Avenue/Henry Ford Railroad bridge.

Additional analysis is provided in the discussion of Visual Resources/Aesthetics (Section 3.7) of the Draft EIS/EIR for the proposed project.

Access

The proposed project alternatives would not affect access to Hudson Elementary School. Access to the school is from the east along Webster Avenue.

Coordination/Consultation

Long Beach Unified School District provided correspondence which established that this facility is used for public recreation; therefore, it has been considered a Section 4(f) resource (see Appendix A). During the public review period of the Draft EIS/EIR, Long Beach Unified School District provided comments on the document. There were no specific comments on the Section 4(f) analysis. General comments on the document are addressed in Chapter 6.0 of the Final EIS/EIR.

1.5.1.3 Cabrillo High School Athletic Fields

Description and Significance of Property

Type/Location/Size

Cabrillo High School is located at 2001 Santa Fe Avenue in Long Beach. SR-103 traverses the western boundary of the school. The school's athletic fields are located along this western boundary.

Access/Facilities/Usage

Access to the Cabrillo High School athletic fields is provided from Monitor Avenue, Santa Fe Avenue, and Willard Street. Facilities include a baseball field, football field and play areas.

Relationship to Similar Facilities in the Area

The athletic fields at Cabrillo High School are part of the Long Beach Unified School District and are adjacent to Hudson Park. The Long Beach Unified School district has a Joint Use Agreement with the City of Long Beach Park and Recreation Department for use of the playground and its athletic fields. The Small Gym at Cabrillo High School is in Joint Use with the City of Long Beach and may be used after school hours and on weekends.

Ownership/Jurisdiction

The Cabrillo School athletic fields are owned by, and subject to the jurisdiction of, the Long Beach Unified School District.

Significance

In a letter dated September 14, 2005, Long Beach Unified School District determined that the fields at both Hudson School and Cabrillo High School are significant publicly owned recreation areas as defined having the function of the recreational area with the Park and Recreation objectives of the community (see Appendix A). Given that the Cabrillo High School facilities are readily accessible to the general public during non-school hours, FHWA concurs with the district's position and has thus included the Cabrillo High School in this Section 4(f) evaluation.

Application of Section 4(f) Criteria for Use**Direct Use**

The proposed project alternatives would not require any permanent use of Cabrillo High School. All construction for the proposed project alternatives, including construction of noise abatement walls, would occur within the existing ROW.

Temporary Occupancy

The proposed project alternatives are not anticipated to require any temporary occupancy of Cabrillo High School. At present, a construction easement is not anticipated. Nonetheless, at the time of construction of Alternative 2 or construction of the associated noise wall (abatement measure), if short-term use of a very small portion of the school land were required, it would be for a short period of time, the scope of work would be minor, no temporary or permanent change in activities would occur, and the property would be returned to a condition as good as or better than at present. Therefore, it would not amount to a Use (as defined under Section 4[f]) of a recreational property.

Constructive Use

The proposed project would not require any constructive use of Cabrillo High School.

Air Quality

Only Alternative 2 would have proximity affects to air quality at Cabrillo High School Athletic Fields. However, these impacts do not rise to the level of substantially impairing the activities. Please see Section 3.13, Air Quality, of the Final EIS/EIR.

Noise

Alternative 2 would construct an elevated expressway adjacent to the west of the Cabrillo High School athletic fields. The types of athletic activities (baseball, softball games, etc.) that take place at the school's athletic fields do not require quiet surroundings. Also, a large industrial area and a busy traffic corridor border the western boundary of the school property. According to the noise study prepared for the project (Caltrans, February 2005), noise levels are expected to exceed the NAC of 67 dBA in association with Alternative 2. At-grade noise walls are proposed along the western extent of the Cabrillo High School athletic fields to abate any adverse noise impacts. No noise impacts to users of playground/athletic fields were identified as a result of Alternative 2 after abatement.

Additional analysis is provided in the discussion of Noise (Section 3.14) of the Draft EIS/EIR for the proposed project.

Aesthetics

The analysis of aesthetic effects in the Draft Visual Impact Assessment prepared for the project finds that the extension of SR-103 to Alameda Street to the northwest as proposed under Alternative 2 would not result in a substantial adverse aesthetic effect at this location. Alternative 2 would not have aesthetic effects that would substantially impair the protected activities, features, and attributes that qualify this resource for protection under Section 4(f).

However, under Alternative 2, the following measures would be implemented to enhance the aesthetics of the expressway along its entire length, including the portion of the expressway in the vicinity of Cabrillo High School Athletic Fields.

- The surfaces of columns, roadway barriers, soundwalls, and gore points will receive surface color treatments at specified locations, as determined by a Caltrans Licensed Landscape Architect.
- Elements of the design of the proposed bridge and expressways, such as color, line, texture, and style, would be aesthetically pleasing and as unobtrusive as possible. During final design, particular attention would be paid to the vertical columns and soundwalls.
- All visual design elements, including landscaping, would be designed and implemented with the concurrence of the Caltrans landscape architect and in compliance with local policies and guidelines.
- Trees and vines will be planted along soundwalls at specified locations, as determined by a Caltrans Licensed Landscape Architect.
- Design of the elevated expressway would be compatible (scale and massing) with the existing Schuyler Heim Bridge or future bridge and the Badger Avenue/Henry Ford Railroad bridge.

Additional analysis is provided in the discussion of Visual Resources/Aesthetics (Section 3.7) of the Draft EIS/EIR for the proposed project.

Access

The proposed project alternatives would not affect access to Cabrillo High School.

Coordination/Consultation

Long Beach Unified School District provided correspondence which established that this facility is used for public recreation; therefore, it has been considered a Section 4(f) resource (see Appendix A).

1.5.2 Historic Sites with Potential Section 4(f) Use

1.5.2.1 Commodore Schuyler Heim Bridge

Description and Significance of Property

Through the Section 106 process, the Schuyler Heim Bridge has been determined to be eligible for listing on the National Register of Historic Places under Criterion C, as the highest vertical lift bridge in the Western United States and one of the most significant vertical bridges in the state of California. The bridge was also found to meet the eligibility criteria for inclusion in the *California Register of Historical Resources* (California Register).

Application of Section 4(f) Criteria for Use

Direct Use

Four build alternatives have been proposed: Alternatives 1 (and 1A), 2, 3, and 4. Under Alternative 1, Alternative 2, and Alternative 4, the Commodore Schuyler F. Heim Bridge would be demolished following construction of a replacement bridge. Demolition would be a direct use of the Section 4(f) resource.

Alternative 3, Bridge Avoidance, was developed for the purpose of this Section 4(f) evaluation. It was conceived to include seismic retrofit to preserve the historic span, but would discontinue use of the Schuyler Heim Bridge as a vehicular bridge. The loss of historic material (i.e., loss of bridge approaches) would result in a direct use. However, the U.S. Coast Guard stated during consultation meetings in December 2005 that the bridge would not be allowed to remain in place if not used for transportation purposes. They further indicated that their permit to construct a replacement bridge would include a requirement for subsequent demolition of the Schuyler Heim Bridge. Accordingly, in light of the U.S. Coast Guard position and permit requirement, Alternative 3 could also result in demolition of the bridge.

Alternative 5, the TSM Alternative, would leave the bridge in place and continue its use for vehicular traffic. The TSM Alternative provides only for minimal maintenance. Similarly, Alternative 6, No Build, would leave the bridge at its original location and continue its use for vehicular traffic. Under the No Build Alternative, the bridge would continue to require regular and routine maintenance.

Under Alternative 5 and Alternative 6, the bridge would retain its eligibility for the National Register and, accordingly, could be exempt from Section 4(f) in accordance with 23 CFR section 117.135 (f), which states:

The Administration may determine that Section 4(f) requirements do not apply to restoration, rehabilitation, or maintenance of transportation facilities that are on or eligible for the National Register when:

- (1) Such work will not adversely affect the historic qualities of the facility that caused it to be on or eligible for the National Register, and

(2) The SHPO and the Advisory Council on Historic Preservation (ACHP) have been consulted and have not objected to the Administration finding in paragraph (f)(1) of this section.

Coordination/Consultation

Consultation with the SHPO and other cultural resources stakeholders has been initiated, and is described in the Section 106 documentation (*Historic Properties Survey Report [HPSR]*, *Supplemental HPSR*, and *Draft Findings of Effect [FOE]*). SHPO was also consulted regarding the Section 106 FOE for this resource during circulation of the Draft EIS/EIR. A Memorandum of Agreement between Caltrans and SHPO has been completed. This MOA is included as Appendix L of the Final EIS/EIR.

Avoidance Alternatives

Alternatives 1, 1A, 2, and 4 would each result in demolition of the Schuyler Heim Bridge and, hence, the direct use of a Section 4(f) resource.

Alternative 6 (No Build Alternative), Alternative 5 (Transportation System Management), and Alternative 3 (Bridge Demolition Avoidance) are the avoidance alternatives to the proposed project that would avoid the use of the Section 4(f) resource, i.e., Schuyler Heim Bridge. The feasibility and prudence of these avoidance alternatives is discussed below.

Section 774.17 defines “prudent” and “feasible” using a balancing test. An alternative is not feasible if it cannot be built as a matter of sound engineering. An alternative is not prudent if it:

- Compromises the project so that it is unreasonable given the purpose and need;
- Results in unacceptable safety or operational problems;
- After reasonable mitigation, still causes:
 - Severe social, economic, or environmental impacts;
 - Severe disruption to established communities;
 - Severe environmental justice impacts; or
 - Severe impacts to other federally protected resources
- Results in additional construction, maintenance, or operational costs of an extraordinary magnitude:
 - Consider factors such as: the percentage difference in the costs of the alternatives; how the cost difference relates to the total cost of similar transportation projects in the applicant’s annual budget; and the extent to which the increased cost for the project would adversely impact that applicants’ ability to fund other transportation projects.
- Causes other unique problems or unusual factors; or
- Involves multiple factors listed above that while individually minor, cumulatively cause unique problems or impacts of extraordinary magnitude.

Alternative 6: No Build Alternative

Feasibility: This alternative is considered feasible because there are no unique engineering challenges associated with this alternative.

Prudence:

- Purpose and Need: Under the No Build Alternative, there would be no physical change to the existing Schuyler Heim Bridge. The existing bridge would continue to be seismically inadequate and subject to damage or collapse under strong seismic conditions. Under this alternative, the traffic congestions and safety issues at the various study intersections and railroad crossing would not be improved. Therefore, this alternative would not meet the purpose and need for the project and therefore, would not be prudent.
- Unacceptable safety or operational problems: Under the No Build Alternative, even with continuing maintenance activities, the bridge is expected to deteriorate over time, as its useful life is eroded further and as various magnitude earthquakes are experienced, which may result in serious safety hazards and operational problems. Therefore, considering the safety of users and operational problems associated with this alternative, this alternative would not be prudent.
- Impacts after reasonable mitigation, cost of extraordinary magnitude, and unusual factors: This consideration is not applicable for this alternative.
- Involves multiple factors listed above that are individually minor but cumulatively considerable: The factors (related to not meeting the purpose and need for the project and resulting in safety and operational problems) are both individually significant and cumulatively considerable.

Based on the above analysis, the Alternative 6, No Build Alternative, is considered to be not prudent.

Alternative 5: Transportation System Management

Please refer to Section 1.3, Proposed Action, of this 4(f) evaluation and Chapter 2.0 of the EIS/EIR for more details about Alternative 5.

Feasibility: This alternative is considered feasible because there are no unique engineering challenges associated with this alternative.

Prudence:

- Purpose and Need: As described in Section 1.3, Proposed Action, of this 4(f) evaluation, in Chapter 2.0 of the EIS/EIR, and in the *Finding of Adverse Effect* (Caltrans, 2006), the TSM Alternative would not result in the demolition of or modification to the Schuyler Heim Bridge and thus would avoid the use of a Section 4(f) resource. However, it would not result in the increased ability of the bridge to withstand a major earthquake and thus it does not address the seismic deficiency of the bridge. In addition, the TSM Alternative would not be effective in reducing roadway demand or in redirecting Terminal Island traffic to other routes. Therefore, this alternative does not meet the purpose and need of the project.
- Unacceptable safety or operational problems: Similar to the No Build alternative, under Alternative 5, even with continuing maintenance activities, the bridge is expected to deteriorate over time as its useful life is eroded further and as various magnitude earthquakes are experienced, which may result in serious safety and

operational problems. Therefore, considering the safety of users and operational problems associated with this alternative, this alternative would not be prudent.

- Impacts after reasonable mitigation, cost of extraordinary magnitude, and unusual factors: This consideration is not applicable for this alternative as the cost for this alternative is low.
- Involves multiple factors listed above that are individually minor but cumulatively considerable: The factors (related to not meeting the purpose and need for the project and resulting in safety and operational problems) are both individually significant and cumulatively considerable.

Based on the above analysis, Alternative 5 is considered to be not prudent.

Alternative 3: Bridge Demolition Avoidance

Please refer to Section 1.3, Proposed Action, of this 4(f) evaluation and Chapter 2.0 of the EIS/EIR for more details about this alternative.

Feasibility: There are no unique engineering challenges associated with construction of this alternative. However, there are U.S. Coast Guard permit requirements that make the construction of this alternative infeasible. U.S. Coast Guard permit requirements would not allow the existing bridge to remain in place if not used for transportation purposes. In preliminary consultation with U.S. Coast Guard, it was noted that the permit to construct a replacement bridge would include a requirement for subsequent demolition of the Schuyler Heim Bridge. Therefore, this alternative is infeasible as the U.S. Coast Guard would not provide a permit to construct the new bridge while keeping the existing bridge intact for non-transportation uses.

Prudence:

- Purpose and Need: Alternative 3 was originally developed to avoid impact to the Schuyler Heim Bridge and thus avoid the use of a Section 4(f) resource. As detailed in Section 1.3 of this 4(f) analysis and Chapter 2.0 of the EIS/EIR, this alternative would provide a new fixed-span bridge on an alignment east of the existing bridge, along with seismic retrofit of the existing bridge, which would remain standing but unused. This alternative would correct the seismic deficiency of the existing bridge and provide a higher-capacity route between Terminal Island and northern arterials that would help reduce congestion and improve safety at rail crossings. Therefore, this alternative would meet the purpose and need of the proposed project.
- Unacceptable safety or operational problems: This consideration does not apply to this alternative.
- Impacts after reasonable mitigation: Although this alternative was perceived as an avoidance alternative, it actually does not completely avoid the use of a Section 4(f) resource. According to the *Finding of Adverse Effects* (Caltrans, 2006), this alternative would still result in an adverse effect to the Schuyler Heim Bridge due to the removal of the approaches, and thus would require removal of historic material and thereby result in a use of the Section 4(f) resource. In addition, this alternative would involve removal of around 0.11 acre of wetland east of the Schuyler Heim Bridge –

federally protected resources. This biological resources impact would not occur for the other build alternatives.

- Costs of Extraordinary Magnitude: Alternative 3 would result in additional construction costs of an extraordinary magnitude. The total cost of building the new bridge and retrofitting the old bridge (that would be kept standing but would provide no transportation function) for this alternative is \$923.4 million, around \$200 million, or over 27 percent, more than the cost for Alternative 2, and \$260 million, or 39 percent more than the cost for Alternative 1. This cost is extraordinarily high and funding would not be available. Additionally, mitigation of impacts to federally protected wetlands would add additional cost to already high construction costs for Alternative 3.

Other unique problems or unusual factors: In addition to the above, U.S. Coast Guard permit requirements would not allow the existing bridge to remain in place if not used for transportation purposes. In preliminary consultation with U.S. Coast Guard, it was noted that the permit to construct a replacement bridge would include a requirement for subsequent demolition of the Schuyler Heim Bridge. This requirement of the U.S. Coast Guard makes this alternative imprudent.

Because of extraordinary cost, impacts to wetlands and a historic resource, and unique problems/unusual factors, according to Section 774.17 above, Alternative 3 is considered not prudent or feasible.

Alternatives on the Same Location

There are no feasible and prudent alternatives available on the same location that would result in avoidance of bridge demolition.

Measures to Minimize Harm

The following measures to minimize harm are presented in the *“Memorandum of Agreement (MOA) between Caltrans and the California State Historic Preservation Officer, regarding the State Route 47 (SR-47) Expressway and the Schuyler Heim Bridge Replacement Project.”* It has been agreed as follows:

For Alternatives 1, 1A, 2, and 4, Caltrans shall ensure the following stipulations are carried out and completed:

1. The Schuyler Heim Bridge (Bridge) shall be offered for sale for reuse in an alternate location to interested public agencies and non-profits. A marketing plan shall be prepared for the sale of the bridge, including: a notification letter, fact sheet, list of intended recipients, as well as provisions for the salvage of smaller components in the case that there is no interest in re-use of the bridge.

Advertisements shall be placed in appropriate newspapers of record. The offer shall run for 6 months. If no acceptable bids are received after 6 months, this stipulation shall be deemed to have been met. The above shall be done in accordance with the U.S. Department of Transportation Historic Bridge Program 23 USC 144(o)(4)(A) and (B).

2. Informative permanent metal plaques shall be installed at both ends of the new bridge at public locations that provide a brief history of the original Bridge, its engineering features and characteristics, the reasons for its demolition, and a statement of the characteristics of the replacement structure.
3. Pursuant to Section 110(b) of the NHPA, before the Bridge is demolished, the Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) shall be contacted to determine what level and kind of recordation is required for the property. All documentation shall be completed and accepted by HABS/HAER before the Bridge is demolished.
4. Copies of the HABS/HAER report shall be disseminated to the City of Los Angeles Public Library and the City of Long Beach Public Library.
5. Information from the HABS/HAER report shall be available to the public for 10 years on an appropriate internet website.
6. A documentary (motion picture or video) shall be produced and shall address the history of the Bridge, its importance and use within the history of the Port of Long Beach and Port of Los Angeles, and demonstrate its operation and function. The motion picture or video will be of broadcast quality, of sufficient length for a standard 30-minute time period and will be made available to local broadcast stations for public access channels in local cable systems and to schools/libraries.
7. Traveling museum exhibits shall be prepared and shall address the history of the Bridge, its importance and use within the history of the Port of Long Beach and the Port of Los Angeles, and demonstrate its operation and function, appropriate for display in small museums, or for use in schools.
8. Artifacts removed from the Bridge during preliminary stages of the demolition process shall be offered to local museums, and provide for their delivery to accepting institutions. Examples of such artifacts may include, but not be limited to, control panels, instruments, structural members, railings, signage, plaques or other identifying ornamentation, street lights, navigation lights, etc.

Least Harm Alternative

As discussed above, all the avoidance alternatives, including the No Build alternative (Alternative 6); Transportation Management System Alternative (Alternative 5); and Bridge Demolition Avoidance Alternative (Alternative 3), are considered not prudent. Alternative 3 is also not considered feasible.

Section 774.3(c) states: If there are no prudent and feasible avoidance alternatives, then the Administration can only approve the alternative that:

- Causes the least overall harm in light of the statutes preservation purposes. This is done by balancing the:
 - Ability to mitigate adverse impacts to each Section 4(f) resource
 - Relative severity of the remaining harm, after mitigation, to the protected activities and attributes or features
 - Relative significance of each Section 4(f) property

- Views of the officials with jurisdiction over each Section 4(f) property
- Degree to which each alternative meets the purpose and need
- After reasonable mitigation, the magnitude of any adverse impacts to resources not protected by Section 4(f); and
- Substantial differences in costs among alternatives

For this project, implementation of each of the remaining build alternatives (Alternatives 1, 1A, 2, and 4) involves the demolition of the Schuyler Heim Bridge. Table 4 below presents the balancing test for the overall harm caused by these alternatives.

TABLE 4
Comparison of Factors Considered in Overall Harm Among Alternatives

Alternatives	Alternative 1	Alternative 1A	Alternative 2	Alternative 4
Ability to mitigate adverse impacts to each Section 4(f) resource	Same with Alternative 1A, 2 and 4	Same with Alternative 1, 2 and 4	Same with Alternative 1, 1A, and 4	Same with Alternative 1, 1A, and 2
Relative severity of the remaining harm, after mitigation, to the protected activities and attributes or features	Same with Alternative 1A, 2 and 4	Same with Alternative 1, 2 and 4	Same with Alternative 1, 1A, and 4	Same with Alternative 1, 1A, and 2
Relative significance of each Section 4(f) property	Same with Alternative 1A, 2 and 4	Same with Alternative 1, 2 and 4	Same with Alternative 1, 1A, and 4	Same with Alternative 1, 1A, and 2
Views of the officials with jurisdiction over each Section 4(f) property	Same with Alternative 1A, 2 and 4	Same with Alternative 1, 2 and 4	Same with Alternative 1, 1A, and 4	Same with Alternative 1, 1A, and 2
Degree to which each alternative meets the purpose and need	Fully meets PN	Fully meets PN, but has low constructability	Fully meets PN	Meet only half PN
After reasonable mitigation, the magnitude of any adverse impacts to resources not protected by Section 4(f)	Lower potential for Haz mat and air quality impacts	Same level of impact compared to Alternative 1	Higher Potential hazardous waste impacts due to going through the land fills; higher potential for air quality impact	Least impact
Substantial differences in costs among alternatives	2nd least cost	Higher cost	Highest cost	Least cost

Based on the comparison table above, each alternative would involve the minimization and mitigation for the loss of the bridge specified above; or in other words, the ability to mitigate for the loss of the bridge is the same for these alternatives. The relative severity of the remaining harm, after mitigation to the Section 4(f) resource would be the same for these alternatives.

However, the degree to which Alternative 4 meets purpose and need is less than the other alternatives because Alternative 4 only involves the replacement of the Bridge, it does not address the purpose and need for the expressway portion of the project.

In terms of differences in costs among the remaining alternatives, Alternative 2 would result in the highest cost compared to the remaining alternatives due to the involvement of higher clean-up cost for hazardous materials. Alternative 1A would also result in higher cost compared to Alternative 1 and Alternative 4, and has lower constructability.

Therefore, Alternative 1 is considered the least overall harm alternative. Alternative 1 is also the preferred alternative identified in the EIS/EIR for this project. (See Subsection 2.2.1 of the EIS/EIR for details about the preferred alternative.)

Conclusion

Based on the above considerations, there is no feasible and prudent alternative to the use of the Commodore Schuyler F. Heim Bridge. Alternative 1 is identified as the least harm alternative and it includes all possible planning to minimize harm to the Commodore Schuyler F. Heim Bridge resulting from such use.

1.6 Section 4(f) Consultation and Coordination

Information regarding potential Section 4(f) properties was sought from:

SHPO

City of Long Beach

Long Beach Unified School District

Copies of correspondence are included in Appendix A.

Consultation was conducted with the above and following agencies during circulation of the Draft EIS/EIR:

Department of Interior (consultation letter is included in Appendix A)

Native American consultation was conducted through letters sent to the California Native American Heritage Commission (NAHC) and to individual Native American contacts.

During the public review period of the Draft EIS/EIR, Long Beach Unified School District provided comments on the document. No specific comments on the Section 4(f) analysis were made. General comments on the environmental analysis were responded to in Chapter 6.0 of the Final EIS/EIR. No comments were received from the Department of Interior regarding the Section 4(f) Evaluation.

1.7 Section 6(f)(3) Considerations

Section 6(f)(3) of the Land and Water Conservation Fund Act (LWCF Act) (16 USC Section 460l-4) contains provisions to protect federal investments in park and recreational resources and the quality of those assisted resources. The law recognizes the likelihood that changes in land use or development may make park use of some areas purchased with LWCF funds obsolete over time, particularly in rapidly changing urban areas, and provides for conversion to other uses pursuant to certain specific conditions.

Section 6(f)(3) - No property acquired or developed with assistance under this section shall, without the approval of the Secretary, be converted to other than public outdoor recreation uses. The Secretary shall approve such conversion only if he finds it to be in accord with the then existing comprehensive statewide outdoor recreation plan and only upon such conditions as he deems necessary to assure the substitution of other recreation properties of at least equal fair market value and of reasonably equivalent usefulness and location.

This requirement applies to all parks and other sites that have been the subject of LWCF grants of any type and includes acquisition of parkland and development or rehabilitation of park facilities.

A review of the LWCF grants database indicates that no park and recreational resources in the project area were funded with LWCF grants. In addition, this project will not result in the acquisition of any parks or recreation lands. Therefore, Section 6(f)(3) does not apply to this project.

 Long Beach, CA 90810

RE: Hudson School and Cabrillo High School Section 4(f) Consultation

Dear Ms. Matsumoto:

Pursuant to the requirements of the National Environmental Policy Act (NEPA), the California Department of Transportation (CALTRANS) and the Federal Highway Administration (FHWA) are currently preparing an Environmental Impact Statement (EIS) for the proposed SR-47 Schuyler Heim Bridge Replacement and SR-47 Expressway Project (SR-47). One of the Alternatives being considered would extend and improve the Terminal Island Freeway (SR-103) adjacent to Hudson School and Cabrillo High School. As part of the NEPA process, CALTRANS and FHWA are also preparing documentation required by Section 4(f) of the Department of Transportation Act of 1966 (see 49 USC §303) (hereinafter referred to as "Draft Section 4(f) Evaluation").

An important component of the Draft Section 4(f) Evaluation is the coordination and consultation effort conducted by CALTRANS and FHWA with those agencies having jurisdiction over public parks and recreation areas in the vicinity of the SR-47 and SR-103. The publicly owned parks and recreational areas that are considered as part of the Draft Section 4(f) Evaluation may include public school playgrounds and athletic fields, depending on whether the facilities in question serve only school activities and functions, or are also available for use by the general public. This correspondence serves as the formal initiation of the coordination and consultation specific to the Section 4(f) process. This formal consultation and coordination can be expected to continue throughout the duration of the NEPA process.

In order to properly characterize the District's playgrounds and athletic fields, and document the potential effects of the proposed project on those resources, CALTRANS and FHWA respectfully request your response to the following initial items:

- (1) Please identify the name and title of the District official(s) to whom future correspondence should be directed.

"Caltrans improves mobility across California"

000/200 ②

XYJ 83 15:43 FAX 12/14/2005 15:43 FAX

Ms. Carrie Matsumoto
August 23, 2005
Page 2

- (2) Is the District the agency that "has jurisdiction over" the playgrounds and athletic fields at Hudson School and Cabrillo High School, as defined in 23 CFR §771.135(a)(2)(c)? Are any after-school recreational programs at these facilities administered by any other group(s) or agency(ies)?
- (3) Are the playgrounds and athletic fields at Hudson School and Cabrillo High School used only for school activities and functions, or are they also available for use by the general public?
- (4) Has the District determined that the playgrounds and athletic fields at Hudson School and Cabrillo High School are "significant" publicly owned recreational areas? For purposes of the Draft Section 4(f) Evaluation, the term "significant" means that, in comparing the availability and function of the recreational area (i.e., the playgrounds and athletic fields) with the park and recreation objectives of the community, the resource in question plays an important role in meeting those objectives.

Please feel free to forward to us any additional information that you believe CALTRANS and FHWA should consider as part of the Draft Section 4(f) Evaluation. Additionally, we would be happy to address any questions or concerns that you may have as this process moves forward.

On behalf of CALTRANS and FHWA, we sincerely appreciate your assistance with this important matter, and look forward to working with you.

Sincerely,

RON KOSINSKI
Deputy Director
Division of Environmental Planning

 Los Angeles, CA 90012-3606

Subject: Hudson K-8 School and Cabrillo High School Section 4(f) Consultation – Terminal Island Freeway

Dear Mr. Kosinski:

This is in response to your letter of August 23, 2005 with reference to Environmental Impact Statement for the proposed SR-47 Schuyler Heim Bridge Replacement and SR-47 Expressway Project (SR-47) Alternatives extending and improving the Terminal Island Freeway (SR-103) adjacent to Hudson K-8 School and Cabrillo High School.

- (1) The name and title of the District representatives to whom future correspondence should be directed are:

Ms. Carri Matsumoto with copy to
 Executive Director of Facilities
 Long Beach Unified School District
 2425 Webster Avenue
 Long Beach, CA 90810

Mr. Kim Stallings
 Chief Business and Financial Officer
 Long Beach Unified School District
 1515 Hughes Way
 Long Beach, CA 90810

- (2) The Long Beach Unified School District has jurisdiction over the playgrounds and athletic fields at Hudson School and Cabrillo School. In addition, at Cabrillo High School, the Long Beach Unified School District currently has a Joint Use Agreement with the City of Long Beach Park and Recreation Department for use of playground and its athletic fields.
- (3) The Small Gym at Cabrillo High School is in Joint Use with the City of Long Beach and may be used after school hours and on weekends. Under the Civic Center Act, California Education Code Section 38130-38139, the District is required to make available its facilities for public and/or community use to organizations that are allowed use under the Civic Center Act. Organizations are required to submit a Use of Facilities Application Request with the District for approval.
- (4) Long Beach Unified School District has determined that the fields at both schools Hudson K-8 and Cabrillo High School are significant publicly owned recreational areas as defined having the function of the recreational area with the Park and Recreation objectives of the community.

The two mentioned schools border the Terminal Island Freeway (SR-103) with Hudson School having the potential for more impacts by noise, traffic and construction activities. Hudson School property is approximately 150' from the freeway and within one quarter mile of the Schuyler Heim Bridge over Willow Avenue. Due to the close proximity of the freeway and bridge to our Hudson School site, the District would like the opportunity in evaluating the potential impact to school sites for development being proposed. Please forward any environmental documents and/or other correspondence to my attention. Thank you for the opportunity to respond. We look forward to working with your office.

Sincerely,

Carri Matsumoto
 Executive Director

February 8, 2007

Mr. Phil T. Hester
Director, Long Beach Parks, Recreation and Marine
333 West Ocean Boulevard
Long Beach, CA 90802

RE: Hudson Park Section 4(f) Consultation

Dear Mr. Hester:

Pursuant to the requirements of the National Environmental Policy Act (NEPA), the Alameda Corridor Transportation Authority (ACTA) and the California Department of Transportation (CALTRANS) are currently preparing an Environmental Impact Statement (EIS) for the proposed Schuyler Heim Bridge Replacement and SR-47 Expressway Project (SR-47). One of the Alternatives being considered would extend and improve the Terminal Island Freeway (SR-103) adjacent to Hudson Park. As part of the NEPA process, ACTA and CALTRANS are also preparing documentation required by Section 4(f) of the Department of Transportation Act of 1966 (*see* 49 USC §303) (hereinafter referred to as "Draft Section 4[f] Evaluation").

An important component of the Draft Section 4(f) Evaluation is the coordination and consultation effort conducted by ACTA and CALTRANS with those agencies having jurisdiction over public parks and recreation areas in the vicinity of the proposed SR-47 and SR-103 alignments. The publicly owned parks and recreational areas that are considered as part of the Draft Section 4(f) Evaluation may include publicly owned recreation areas, depending on whether the facilities in question are available for use by the general public. This correspondence serves as ongoing coordination and consultation specific to the Section 4(f) process. This formal consultation and coordination can be expected to continue throughout the duration of the NEPA process.

Previously, on August 23, 2005, Caltrans initiated Section 4(f) consultation with the Long Beach Unified School District regarding Hudson School and Cabrillo High School. The athletic fields at Cabrillo High School are part of the Long Beach Unified School District and are adjacent to Hudson Park. The Long Beach Unified School District has a Joint Use Agreement with the City of Long Beach Parks, Recreation, and Marine for use of the playground and its athletic fields.

In order to further characterize Long Beach Parks, Recreation and Marine's playgrounds and athletic fields, and document the potential effects of the proposed project on those resources, ACTA and CALTRANS respectfully request your response to the following:

"Caltrans improves mobility across California"

- (1) Please identify the name and title of the Long Beach Parks, Recreation and Marine official(s) to whom future correspondence should be directed.
- (2) Is Long Beach Parks, Recreation and Marine the agency that “has jurisdiction over” Hudson Park, as defined in 23 CFR §771.135(a)(2)(c)?
- (3) Has Long Beach Parks, Recreation and Marine determined that Hudson Park is a “significant” publicly owned recreational area? For purposes of the Draft Section 4(f) Evaluation, the term “significant” means that, in comparing the availability and function of Hudson Park with the park and recreation objectives of the community, the resource in question plays an important role in meeting those objectives.

Please feel free to forward to us any additional information that you believe ACTA and CALTRANS should consider as part of the Draft Section 4(f) Evaluation. Additionally, we would be happy to address any questions or concerns that you may have as this process moves forward.

On behalf of ACTA and CALTRANS, we sincerely appreciate your assistance with this important matter, and look forward to working with you.

Yours very truly,

Ron Kosinski
Deputy Director

Ray Kosinski, Deputy Director
California Department of Transportation
District 7 – Division of Environmental Planning
100 Main Street, Suite 100
Los Angeles, CA 90012-3606

Subject: Hudson Park Section 4 (f) Consultation

Dear Mr. Kosinski:

In accordance with your requests for information, I have provided the following responses:

- 1.) Please address all future correspondence to:
Phil T. Hester, Director of Parks, Recreation and Marine
2760 Studebaker Road
Long Beach, CA 90815
- 2.) Yes, the Department of Parks, Recreation and Marine has jurisdiction over Hudson Park.
- 3.) Yes, Hudson Park is a significant publicly owned recreational facility. At 13.09 acres, Hudson Park is the 17th largest park of the 104 parks in Long Beach. All parks are significant to a degree, as the city has 5.4 acres of recreational open space per 1,000 residents, while seeking to achieve a goal of 8 acres per 1,000 residents. However, as Hudson Park is located in the west park statistical area, which has only 1 acre per 1,000 residents, it is especially important.

Additionally, as Long Beach is a fully subdivided and developed city, parcels of land large enough for sports fields are almost impossible to find and acquire. Hudson Park contains two baseball/softball fields and one soccer/football field. The Parks, Recreation and Marine Department's Strategic Plan indicates the city needs 32 more baseball/softball fields, and 55 more soccer/football fields for youth and adult sports leagues. Thus, it provides an irreplaceable role in the organized recreational leagues in several sports.

"We create community and enhance the quality of life through people, places, programs and partnerships"

 Document #: 2007-07-01D

Mr. Willie R. Taylor
 Director, Office of Environmental Policy and Compliance
 Department of the Interior
 Main Interior Building, MS-2342
 1849 C Street, NW
 Washington, DC 20240

Attn: Ms. Ethel Smith

Dear Mr. Taylor:

The Memorandum of Understanding (MOU) between the Federal Highway Administration and the California Department of Transportation (Caltrans), which became effective July 1, 2007, was signed pursuant to Section 6005 of the 2005 Safe, Accountable, Flexible, efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU). This MOU allows the Secretary of Transportation to assign, and the State of California to assume, FHWA's responsibilities under NEPA as well as consultation and coordination responsibilities under other Federal environmental laws. As this project is covered by the Pilot Program established by the MOU, FHWA has assigned and Caltrans has assumed FHWA's responsibility for environmental review, consultation, and coordination on this project.

Caltrans has completed the Draft Environmental Impact Report/Statement (EIR/EIS) and section 4(f) Evaluation for the Schuyler Heim Bridge Replacement and SR-47 Expressway Project in the Ports of Long Beach and Los Angeles, California. There are six alternatives for the project that are discussed in the document.

Per your environmental review process guidelines, please find enclosed eighteen (18) electronic copies. The Section 4(f) Evaluation is found in Appendix B. There is one section 4(f) resource affected - the Schuyler Heim Bridge.

This document is forwarded for your review and comments pursuant to 23 CFR 771.135(i). Please provide your comments by the close of the public review period on October 16, 2007.

If you have any questions, please contact Karl Price, at (213) 798-1839.

Sincerely,

A handwritten signature in black ink that reads "Ron Kosinski".

RELOCATION IMPACT REPORT

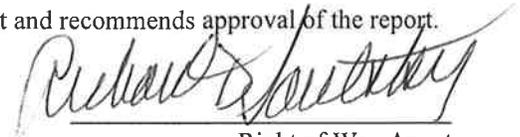

Schuyler Heim Bridge Replacement and
SR-47 Expressway Project
07-LA-47-KP 4.4/9.3 (PM 2.7/5.8)
EA: 238500

SUMMARY OF RELOCATION IMPACT REPORT

The proposed Schuyler Heim Bridge Replacement and SR-47 Expressway Project proposes full acquisition, permanent highway easements and permanent aerial easements, some of which would require the relocation of businesses. No residential property acquisitions are anticipated. All relocation activities would be conducted in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended. Relocation resources shall be available to all displacees without discrimination.

The area selected for the relocations is dependent upon the type of business to be relocated and the market availability of property (fee or leasehold). For example if the use is an auto repair shop then land zoned for this type of use is the area in which the business could be relocated. Because the market is dynamic, the area for relocation cannot be determined prior to relocation. In addition, the relocated business cannot be forced to accept the relocation as presented by the agency. In many cases, multiple potential relocation areas are proposed and rejected until the business accepts a suitable relocation.

The undersigned has reviewed this report of the above-referenced project and recommends approval of the report.

Richard S. Smith
Right of Way Agent

The undersigned has reviewed and approved this report.

SUMMARY AND PROJECT DATA**A. Purpose of Study**

The purpose of this study is to provide the California Department of Transportation (Caltrans), local agencies, and the public with information regarding the effect the proposed Schuyler Heim Bridge Replacement and SR-47 Expressway Project would have on non-residential occupants within the alignments of the project alternatives. Specifically, this report is concerned with potential problems that may be caused by the displacement of existing non-residential structures and their occupants. No residential properties would be displaced under the project alternatives.

B. Limits and Purpose of Project

The project alternatives are located in Los Angeles County, within and north of the Ports of Los Angeles and Long Beach, as shown in Attachments 1 and 2. In general, the project alternatives are located between Ocean Boulevard on the south, Alameda Street on the west, SR-103 on the east, and Interstate 405 on the north.

The purpose of the proposed project is to provide a limited-access, high capacity, structurally and seismically safe vehicular connection along the critical north-south corridor between Terminal Island and the mainland that will facilitate the movement of people, freight, and goods and reduce congestion on local roadways. The project would include Terminal Island, located within the Ports of Long Beach and Los Angeles, and major traffic arterials on the mainland to the north, primarily within the cities of Long Beach and Los Angeles. The existing Schuyler Heim Bridge is a vital transportation link, but does not meet current seismic criteria and poses a potential safety risk to motorists and to marine users of the Cerritos Channel. The purpose of the project is to provide an efficient, safe, and immediate service connection across the Cerritos Channel. For the purposes of discussion below, the terms “alternatives” and “alignments” are synonymous.

C. Description of Alignments Studied (2)

Alignment A (Alternative 1 – Bridge Replacement and Expressway): Alternative 1 would replace the existing Schuyler Heim Bridge (built in 1946-48) in order to meet current seismic criteria. The new bridge would provide a route linking Terminal Island to the mainland and would be designed to remain in service to ensure ground and vessel transportation immediately following a major earthquake. Alternative 1 also would construct a new SR-47 Expressway to provide a high-capacity alternative route along the Alameda Corridor for traffic between Terminal Island and Alameda Street, north of Pacific Coast Highway.

With this alternative, a new fixed-span bridge would be constructed, primarily within the existing bridge right-of-way (Caltrans Highway Easement), but toward the east to avoid impacts to the Badger Bridge, located west of the Schuyler Heim Bridge. The existing bridge would be demolished after construction of the new bridge was completed. The replacement bridge would be slightly wider (13 meters [m] [43 feet (ft)]) than the existing bridge due to the addition of standard width shoulder lanes, which are not present on the existing bridge. The replacement bridge would include three 3.6-m (12-ft) lanes (two through-lanes and one auxiliary lane), with 3-m (10-ft) shoulders in the northbound direction and three 3.6-m (12-ft) lanes, one 3.6-m (12-ft) auxiliary lane, and 3-m (10-ft) shoulders in the southbound direction. Construction of the replacement bridge would include a southbound off-ramp and northbound on-ramp at New Dock Street on Terminal Island, as well as a northbound off-ramp and southbound on-ramp at Henry Ford Avenue on the mainland side of the bridge. With this alternative, the new bridge would be supported by four piers in the channel, with a minimum vertical clearance of 14.3 m (47 ft) over the mean high water level (MHWL). The existing navigable width of the channel is 54.9 m (180 ft), and would not change under this alternative. The navigable width is directly tied to the navigable width (54.9 m [180 ft]) of the Badger Bridge.

The southern end of the new SR-47 Expressway would begin on Terminal Island, at the intersection of SR-47 and Ocean Boulevard, extending north over New Dock Street and onto the replacement bridge. The expressway would extend northward to Alameda Street, to the intersection with Pacific Coast Highway, a distance of approximately 2.7 kilometers (km) (1.5 miles [mi]). The expressway would be a four-lane, limited access roadway. It would provide grade-separation at five at-grade railroad crossings and

three signalized intersections along its length. A segment of the expressway would be constructed as a viaduct over Henry Ford Avenue and Alameda Street and return to grade at Alameda Street, just south of Pacific Coast Highway. Under this alternative, the current connectivity to SR-103 would be maintained.

Alternative 1 also includes construction of the Ocean Boulevard/SR-47 Flyover (flyover), a two-lane, elevated structure to divert traffic bound for northbound SR-47 directly onto the new bridge from eastbound Ocean Boulevard. The purpose of the flyover is to enable this traffic to avoid the signalized Ocean Boulevard/SR-47 intersection. The flyover would begin on Terminal Island, about 1,200 m (3,900 ft) west of the Ocean Boulevard/SR-47 intersection, extend eastward along the south side of Ocean Boulevard, then turn north, cross over Ocean Boulevard and onto the new bridge. The west end of the flyover would be at grade, then the structure would rise to a maximum elevation of 21 m (69 ft) to cross over Ocean Boulevard, then descend to an elevation of 12.9 m (42.4 ft) to join the new bridge. The flyover would have an overall length of 1,550 m (5,084 ft), ending at the northerly end point (gore point) of the northbound New Dock Street on-ramp onto the bridge. The left lane of the flyover would converge with the SR-47 through lane to the left; the right lane of the flyover would continue as a northbound SR-47 through lane and would continue to SR-47. The flyover would be located entirely within the City and Port of Long Beach.

Alignment B (Alternative 1A – Haunch Bridge Design): Alternative 1A is a structural variation of Alternative 1. The purpose of this alternative is to improve the aesthetic appearance of the replacement bridge over the Cerritos Channel and to span a greater horizontal distance across the channel between columns. This is accomplished by increasing the span lengths over the channel and arching the superstructure soffits (the bottom of the bridge structure). Under this alternative, the new bridge would be supported by two piers (four columns) in the Cerritos Channel, compared to four piers (eight columns) under Alternative 1; the minimum vertical clearance between the piers would be of 14.3 m (47 ft). With this alternative, the new bridge would be supported by two piers in the channel, with a minimum vertical clearance of 14.3 m (47 ft) over the mean high water level (MHWL), the same as Alternative 1.

Other aspects of this alternative would be the same as Alternative 1.

Alignment C (Alternative 2 – SR-103 Extension to Alameda Street): With this alternative, as with Alternative 1, the flyover would be constructed, a new fixed-span bridge would be constructed, and the existing Schuyler Heim Bridge would be demolished. Additionally, modifications to the northbound and southbound approaches to the bridge would be constructed. Similar to Alternative 1, a new southbound off-ramp and northbound onramp at New Dock Street on Terminal Island would be constructed.

This alternative also would extend SR-103 from south of West Hill Street to the northwest on a four-lane viaduct to join Alameda Street between Sepulveda Boulevard and I-405. Improvements to SR-103 would begin approximately 3.2 km (2 mi) north of the Schuyler Heim Bridge and extend a distance of approximately 2.6 km (1.6 mi). The viaduct would cross over the Union Pacific Railroad Manual Yard and San Pedro Branch line, through the Southern California Edison (SCE) utility corridor, across the Los Angeles Harbor Department Warehouse 16/17 area, and over Sepulveda Boulevard, then turn parallel to the western boundary of the Intermodal Container Transfer Facility (ICTF) to the centerline of Alameda Street. The viaduct would return to grade south of the Wardlow Road (and E. 223rd Street) ramps to I-405. Improvements would be made to the existing SR-103 to accommodate the southerly and northerly end connections of the viaduct.

The flyover would be the same as under Alternative 1 although with this alternative, after joining with SR-47, the right lane of the flyover would continue to SR-103.

Alignment D (Alternative 3 – Bridge Avoidance): This alternative was developed specifically as a potential avoidance alternative for the purpose of the Section 4(f) analysis. It was conceived to preserve the existing Schuyler Heim Bridge following construction of a new fixed-span bridge on an alignment east of the existing bridge. Under this alternative, the new bridge would have the same lane configuration as the replacement bridge for Alternative 1. The existing Schuyler Heim Bridge would be seismically retrofitted before construction of the new bridge; however, the Schuyler Heim Bridge would no longer be used for transportation purposes once the new span goes into operation. This alternative was conceived to include

seismic retrofit so that the existing Schuyler Heim Bridge could remain standing but unused. The retrofit would be for safety purposes, to ensure that the existing bridge would not collapse and result in safety hazards or damage to the new bridge or to the adjacent Badger Avenue Bridge and thus avoid demolition of a historic resource.

The existing Schuyler Heim Bridge may be required to be demolished to comply with U.S. Coast Guard (Coast Guard) permit requirements. In preliminary consultations held in December 2005, the Coast Guard stated that the bridge would not be allowed to remain in place but unused. The Coast Guard further indicated that their permit to construct a replacement bridge would include a requirement for subsequent demolition of the Schuyler Heim Bridge.

Alignment E (Alternative 4 – Bridge Replacement Only): This alternative would replace the existing Schuyler Heim Bridge (lift bridge) with a fixed-span bridge largely along the existing bridge alignment, as described under Alternative 1. With this alternative, no roadway improvements would occur. With this alternative, therefore, the SR-47 Expressway described in Alternative 1 would not be constructed; and the SR-103 extension to Alameda Street described in Alternative 2 would not be constructed.

Alignment F (Alternative 5 – Transportation System Management): The Transportation System Management (TSM) alternative is designed to identify low-cost, easily implemented improvements as an alternative to construction of more expensive improvements. For this project, the TSM alternative focuses on improvements to routes that parallel the proposed SR-47 Expressway, and that serve the same trips. These trips include trucking drayage trips to and from the ICTF, and trips destined to and from the Ports via Alameda Street, Henry Ford Avenue, and SR-47. The TSM alternative would include measures to improve capacity and traffic circulation at the Port of Long Beach and Port of Los Angeles through policy changes and use of the latest technologies. With this alternative, capital investment would be minimal compared to the previous alternatives addressed.

The TSM alternative for this project includes the following key elements:

- Intelligent Transportation Systems (ITS): Systems applications in and around the Ports area, with special emphasis on truck movements. These include measures to improve traffic circulation through traffic control, incident management, traffic surveillance, and traffic information dissemination with the aid of intelligent transportation system devices and systems.
- Lower-cost roadway and intersection improvements: Measures include restriping to provide additional turn lanes and acceleration lanes and traffic signalization improvements, primarily within existing rights-of-way.
- Minor roadway widening: There also could be peak-hour parking prohibitions to remove midblock bottlenecks along selected roadways.

Alignment G (Alternative 6 – No Build): Under the No-Build alternative, there would be no changes to the existing Schuyler Heim Bridge or local roadway system. The existing Schuyler Heim Bridge would continue to be seismically inadequate and subject to damage or collapse under strong seismic conditions. Maintenance activities would continue and would include application of protective coatings; lift mechanism repairs; deck resurfacing; and other, similar, maintenance activities. The existing SR-47 roadway would function with current and increasing levels of congestion.

1. Is there a “core” corridor common to all alternates? Yes No
The Schuyler Heim Bridge is common to all build alternatives.

D. Basis of Findings

The sources used in the preparation of this report were both primary and secondary in nature, and are identified in the References section at the end of this document. Information was gathered from the right-of-way studies conducted by Alameda Corridor Transportation Authority.

E. Describe the Displacement Area: (neighborhood, amenities, access, facilities, general occupancy characteristics)

No residential areas exist within the area of displacement; no residential properties would be displaced. Displacements of industrial/commercial businesses would occur. The majority of the businesses are machine shops, autobody shops, recycling facilities, and container storage type businesses.

The displacement area is along the project alignments within the Cities of Long Beach, Los Angeles and Carson. In general the displacement area is located along SR-47, north of Ocean Boulevard and south of Alameda Street. The area is highly developed with heavy industrial, commercial, and transportation uses associated with the nearby Ports of Los Angeles and Long Beach. Access to the areas is primarily via SR-47.

The local amenities within the immediate area and their distances from the project site include:

- Hudson Park, approximately 0.25 mile east of Alternative 2;
- Admiral Kidd Park, approximately 0.5 mile east of Alternative 2;
- East Wilmington Park, approximately 0.3 mile east of Alternative 1;
- Banning Park, approximately 1 mile west of Alternative 1; and
- East Wilmington Park, approximately 1 mile west of Alternative 1.

The schools in the area and their distances from the project site include:

- Hudson Elementary School, adjacent and to the east of Alternative 2;
- Cabrillo High School, adjacent and to the east of Alternative 2;
- Holy Family Grammar School, approximately 0.5 mile west of Alternative 1; and
- Wilmington Park Elementary School, approximately 0.7 mile west of Alternative 1.

None of the school or park properties would be acquired as part of the project.

F. Estimated Displacement Units by Alignment

Alignment A (Alternative 1 – Bridge Replacement and Expressway): Under Alternative 1, there would be no residential displacements. There would be full acquisition of 11 Assessor-numbered parcels (6 ACTA-numbered parcels, all privately owned); 5 APN-numbered parcels are vacant, and 6 businesses would require relocation. There would also be approximately 129 partial takes (aerial/highway easements) and 82 temporary construction easements. Nine slips would be acquired at the Leeward Bay Marina.

Alignment B (Alternative 1A – Haunch Bridge Design): The only difference between this alignment and Alignment A is the design of the new bridge, which would have no effect on the number or type of displacements. Therefore, as with Alternative 1, there would be no residential displacements. There would be full acquisition of 11 APN-numbered parcels (6 ACTA-numbered parcels, all privately owned); 5 APN-numbered parcels are vacant, and 6 businesses would require relocation. There would also be approximately 129 partial takes (aerial/highway easements) and 82 temporary construction easements. Nine slips would be acquired at the Leeward Bay Marina.

Alignment C (Alternative 2 – SR-103 Extension to Alameda Street): Under Alternative 2, there would be no residential displacements. There are 118 partial takes (aerial/permanent highway easements) and 73 temporary construction easements. Under Alternative 2, two businesses would require relocation as a result of permanent highway easements.

Alignment D (Alternative 3 – Bridge Avoidance): There would be no residential or non-residential displacements requiring relocation. This alternative would result in approximately 61 partial takes (aerial/highway easements) and 41 temporary construction easements. Nine slips would be acquired at the Leeward Bay Marina.

Alignment E (Alternative 4 – Bridge Replacement Only): Under Alternative 4, there would be no residential or non-residential displacements requiring relocation assistance. This alternative would result in 17 partial takes (aerial/highway easements) and 8 temporary construction easements.

Alignment F (Alternative 5 – Transportation System Management): Under the TSM Alternative, there would be minimal construction. Therefore, no relocations or displacements are anticipated.

Alignment G (Alternative 6 – No Build): Under the No-Build Alternative, no relocations or displacements would occur.

H. Adequate Relocation Resources

Exist for:

	Yes	No
Residential owners	<input type="checkbox"/>	<input type="checkbox"/>
Residential tenants	<input type="checkbox"/>	<input type="checkbox"/>
Mobile homes	<input type="checkbox"/>	<input type="checkbox"/>
Businesses	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Nonprofit organizations	<input type="checkbox"/>	<input type="checkbox"/>
Agriculture	<input type="checkbox"/>	<input type="checkbox"/>

No residential properties, mobiles homes, nonprofit organizations, or agricultural areas would be acquired in association with implementation of this project.

1. *The closest replacement area identified is within Zip Codes 90744, 90810, and 90813. However, based on previous experience and current research, it is challenging to relocate the types of businesses that are being displaced as a result of this project. Given the declining percentage of land under manufacturing and industrial use in most cities, the availability of land for uses such as container storage, recycling facilities, landfill, trucking related businesses and other industrial uses is limited. Therefore, relocation sites outside the immediate vicinity would be considered.*
2. The relocation area is comparable in terms of amenities, public utilities, and accessibility to public services, transportation, and shopping. Yes No
The relocation area is an urban area with all amenities and public utilities in place.
3. The relocation resources (are) () affordable to residential displacees, given the use of replacement housing payments. However, *there are no residential displacements as a result of the project.*
4. *The project would not result in any typical residential displacements. Businesses in this area have been known to have resident caretakers on their properties. If any of the businesses that are being relocated include resident caretakers, appropriate relocation could be provided for these resident caretakers. The 9 slips that would be acquired at the Leeward Bay Marina could result in relocation of one resident.¹ However, these live aboard residents rent slips on a month-to-month basis. According to the rental agreements, the Port can give these tenants 30-day advance notice to vacate for any reason and the Port is not responsible to compensate its tenants. Other public projects that may require displacements (either residential or non-residential) in the area include Pier 400 Container Terminal and Transportation Corridor Project, Wilmington Parkway, Pacific Corridor Redevelopment Project, San Pedro, Southern California International Gateway, Piers D, E, F Terminal Redevelopment, Piers G & J Terminal Redevelopment Project, Pier A West Expansion Project, Pier S Marine Terminal, Pier J South Terminal, Pier T, Long Beach LNG Terminal, and Gerald Desmond Bridge Replacement Project. However, it is anticipated that these projects would undertake a study of relocations and abide by the regulations governing relocations.*
5. *The State's relocation program is adequate to successfully relocate all displacees.*
6. *The business and industries to be relocated are machine shops, autobody shops, recycling, container storage type uses. Given the nature of these businesses, they are not compatible with residential and office commercial uses. The area in the vicinity of the Ports has developed as an industrial area suitable for locating such businesses due to lack of residential uses in the vicinity. The amount of land under industrial uses has been on a decline in the Los Angeles area. Industrial uses are largely perceived as undesirable due to issues related to use of hazardous materials, contamination and noise/traffic nuisances. For this reason, the relocation of businesses would likely have to occur in close vicinity where other such and similar uses exist. If the uses cannot be relocated within the Port area, locations outside Los Angeles County would be considered. Acquisition and relocation alternatives would be evaluated once a preferred alternative is available. All efforts would be made to relocate the businesses within a suitable replacement area and/or just compensation would be provided.*
7. *Last Resort Housing Program payments are not anticipated, as no households would be relocated as a result of the project.*
8. *It is not anticipated that construction of replacement housing under the Last Resort Housing Program will be required.*
9. *A field office will not be required for this project.*

¹ Based on a conservative estimate, 15% of the boat slips within POLA and POLB contain live-aboard residents. To arrive at the number of live-aboards likely to be relocated as a result of Alternatives 1, 1A, and 3, calculating fifteen percent (15%) of the nine (9) slips would equate to possibly taking one (1) resident at the Leeward Bay Marina. Therefore, for the calculations in this DRIR, it is assumed that one live-aboard resident would be relocated. Source: Harley Martin, CH2MHILL, in conversation with Rick Adler at POLA Property Management Division and Larry Ditchkus at POLB Property Management Division on February 16, 2006.

DETAILED ANALYSIS

I. DISPLACEMENT AREA

1. Residential Displacements

The project would not result in any typical residential displacements. Businesses in this area have been known to have resident caretakers on their properties. If any of the businesses that are being relocated include resident caretakers, appropriate relocation could be provided for these resident caretakers. The 9 slips that would be acquired at the Leeward Bay Marina under Alternatives 1, 1A, and 3 could result in relocation of one resident.

2. Business and Nonprofit

1. Number of businesses directly impacted by the project.

Six businesses would be relocated as a result of alternatives 1, 1A, and 3; these include recycling facilities, transportation company repair shop, materials, transportation system and facilities management company. All of these businesses are on parcels zoned as commercial/industrial.

Under Alternative 2, two buildings (not entire parcels) would be acquired as Permanent Highway Easements, thereby denying them of their existing use. One of these buildings is owned by Corridor Properties, and the other is an industrial building owned by Southern California Edison. Note that in the after condition, the permanent and aerial highway easements could allow for temporary uses, such as parking, temporary structures such as storage sheds or trailers, and storage of non-hazardous materials.

Alternatives 4, 5, and 6 would not require relocation of any businesses and/or nonprofits.

		Alignments

Construction											
Manufacturing											
Retail											
Government											
Nonprofit											
Service		6	6	2	6	0	0	0			
TOTAL		6	6	2	6	0	0	0			

2. Age of business:

		Alignments									
		A	B	C	D	E	F	G			
1-3 Years											
4-7 Years		6*	6*	2*	6*	0*	0*	0*			
8-15 Years											
Over 15 Years											

*This is an estimate based on the average age of similar types of businesses in the area. Interviews with the businesses, to be conducted later in the process, would reveal the exact age of the business at its existing location.

3. Estimated number of employees:
 Note: Small business is defined as 500 or fewer employees. Over 500 = No reestablishment payment.

		Alignments						
		A	B	C	D	E	F	G
1-20	X (Max5x20=100)	X (Max5x20=100)	X (Max 2x20=40)	X (Max5x20=100)		-	-	-
21-100								
101-500								
Over 500								

Note: 1-20 employees for each business. Please note that this is a conservative estimate available at this time. Once a project alternative is selected, a detailed interview will take place with the business owners to obtain relevant information about their businesses.

4. There are no businesses impacted by the project that are assumed to be minority owned.
5. Number of the different type of facilities:

		Alignments						
		A	B	C	D	E	F	G
Strip commercial								
Small shop-center								
Regional center								
Single structure	6	6	2	6	0	0	0	
Mixed residential								
Industrial park								
Low rent area								

Note: As shown above, only single structure buildings will be impacted.

3. **Agricultural Impact: Analysis of farm operations, and how impacted, especially if part take and owners or tenants working will be displaced**
 1. Type of agriculture: *The proposed project would not result in any agricultural impacts.*

II. REPLACEMENT AREA

- A. **Describe in Relationship to the Local Town/Community and to the Displacement Area**
The EIS/EIR for the project is currently under preparation and will evaluate the environmental impacts of the various alternatives for the project. Upon completion of the environmental review process, which includes opportunity for public input, a feasible alternative will be chosen. The acquisition process would begin once a preferred alternative has been adopted by the lead agency. No residential relocations are anticipated under any alignment. However, in the event replacement is needed, the replacement area would be determined based on the adopted alternative and available replacement housing.

1. Housing stock:
 - a. Number of single-family residences: N/A_____
 - b. Number of multiple-family units: N/A_____
 - c. Number of mobile homes and other: N/A_____
 - d. TOTAL HOUSING UNITS (a+b+c): N/A_____

No residential acquisitions would occur.

2. Vacancy rate expressed as a percent: For Rent For Sale
 Single-family residences N/A_____ N/A_____
- Multiple-family units N/A_____ N/A_____
- Mobile homes N/A_____ N/A_____
- No residential acquisitions would occur.*

3. Housing characteristics:
No residential acquisitions would occur.

4. Average prices of typical single-family homes that are DS&S for the displacement properties:
No residential acquisitions would occur.

B. Business and Nonprofit Replacement

1. Number of business sites that will be available for rent, purchase, or development
No business sites will be available for rent, purchase, or development as a result of the project alternatives.

		Alignments									
		A	B	C	D	E	F	G			
Construction		-	-	-	-	-	-	-	-	-	-
Manufacturing		-	-	-	-	-	-	-	-	-	-
Retail		-	-	-	-	-	-	-	-	-	-
Government		-	-	-	-	-	-	-	-	-	-
Nonprofit		-	-	-	-	-	-	-	-	-	-
Service		-	-	-	-	-	-	-	-	-	-
Total		0	0	0	0	0	0	0	0	0	0

2. Discuss difficulties the businesses may encounter in finding replacement property because of:
- a. Replacement site requirements: *The businesses require similarly zoned commercial/industrial land that allows uses such as recycling and auto body shops. No other requirements exist.*
 - b. Lease rates or purchase price: *No difficulties related to lease rates or purchase price are anticipated.*
 - c. Financial capacity of the businesses to accomplish move: *No difficulties related to lease rates or purchase price are anticipated. All eligible businesses, as determined by the Uniform Relocation Act, will receive relocation assistance.*
 - d. Special services that may be needed to assist businesses relocate (e.g. rezoning, reduced CUP costs, advanced payments, construction of replacement site, professional services to plan the move or obtain replacement site, business loans, special consideration by the local agency): *No special services have been identified. See response to 2.c., above.*
3. Discuss difficulties the employees may have if the business relocated as planned: *If the businesses are relocated in the vicinity of their existing location, no impacts or, at most, minor impacts to employees would occur. However, if the businesses are relocated far from the displacement site, employees may need to relocate with the business or find new employers. However, this remains undetermined at this point in the process and would be given due consideration once the relocations are finalized. Once a preferred alternative is selected, an interview process with the business owners would be initiated. As a result of the interview process, more detailed information regarding type of business and employees would become available.*
4. Discuss difficulties the employees may have if the business cannot relocate as planned: *See response to 3, above.*

C. Residential Replacement

1. Section 8 rental limits: *No Section 8 housing would be displaced.*
2. Replacement neighborhood is homogeneous to displacement area. *No residential displacements would occur.*
3. General condition of displacement neighborhood: *No residential displacements would occur.*
4. Condition of units being displaced:
N/A Very Good Good Average Fair/Poor
5. Compared to condition of units in replacement area:
N/A Very Good Good Average Fair/Poor
6. Number of mobile home parks directly impacted by the project 0.
7. Number of mobile homes directly impacted by the project 0 within the park.
8. Number of mobile homes directly impacted by the project 0 that are not in a mobile home park.

D. Comparative Data

Not applicable, as no residential displacements would occur.

	DISPLACEMENTS	PROJECT AREA	REPLACEMENT AREA
Total housing units	0	0	0
% owner occupied	0	0	0
% renter occupied	0	0	0
Total housing units vacant	0	0	0
Vacancy rate	0	0	0
Housing units for sale	0	0	0
Housing units for rent	0	0	0
Persons per household	0	0	0
Median housing value	0	0	0

III. RELOCATION RESOURCES

A. Adequate Resources (availability, funds, staffing, time) exist for all displacees

Adequate resources exist.

B. The Replacement Area Chosen and Used as a Basis for Relocation Resources

The project is in an active industrial/commercial area, and suitable replacement sites are available in the market.

C. Adequacy of Market Availability

Market availability is expected to be adequate to meet the relocation demands of the project alternatives.

IV. RELOCATION PROBLEMS AND PROGRAMS

A. Relocation Problems

No relocation problems related to the categories provided below are anticipated.

Elderly *	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Minorities	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Low income (30%)	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Overcrowded residence	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Low income (poverty)	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Handicapped*	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Last resort housing const.	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Minority business	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Marginal business*	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	Other	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Lack of availability	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>			

*All indicate special advisory assistance will be needed.

B. Housing Impact

This project will not impact the local housing stock for the community, as no residential displacements would occur.

C. Conclusion

The right-of-way surveys have recently been completed. Once the environmental review process is completed and public input has been sought, a preferred alternative will be chosen. Acquisition and relocation alternatives would be evaluated once a preferred alternative is available. All efforts would be made to relocate the businesses within a suitable replacement area and/or just compensation would be provided.

All relocation activities would be conducted in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended. Relocation resources shall be available to all displacees without discrimination.

FINAL CONCLUSION: *The project alternatives would not result in any residential displacements. Relocation of not more than 6 businesses would occur under any alternative studied in this report. The project is in an active industrial/commercial area. Suitable replacement sites are available in the market and would be adequate to meet the replacement needs generated by the project.*

KP 4.5/8.5 (PM 2.8/5.3)
Schuyler Heim Br. Replacement and
SR-47 Expressway
EA 199900

Dear Concerned Individuals and Interested Parties:

Notice of Scoping/Initiation of Studies

Caltrans is formally initiating studies for a proposed project in the Los Angeles/Long Beach Harbor area. The project involves replacing the seismically-deficient Schuyler Heim Bridge and improving the SR 47/Henry Ford Avenue/Alameda Street transportation corridor by constructing an elevated expressway from the Heim Bridge to SR 1 (Pacific Coast Highway). It is proposed to replace the existing vertical lift bridge with a fixed structure; various alternative alignments, heights and clear channel widths are being considered. Alternatives are also being considered for the expressway/SR 103 interchange in the expressway portion of the project. The proposed work will require additional Right of Way. The attached map shows the general limits of the proposed study.

During 2002, Caltrans and ACTA began formal public scoping and initiation of environmental studies for the proposed project. Notice letters were sent to federal, state, and local agencies on January 28, 2002. Notices were published in local newspapers advertising the public scoping and open house meetings on February 13, 2002. Public comments were received until February 28, 2002. Budgetary constraints then led Caltrans to temporarily suspend the project.

It is anticipated that the appropriate environmental document will be an Environmental Impact Report/Environmental Impact Statement (EIR/EIS). However, this will be determined by the results of the environmental studies that will be conducted.

It would be appreciated if you would notify us of any existing facilities or planned developments surrounding the project study area. Caltrans anticipates that working cooperatively with the public in an effort to exchange ideas will assure that all pertinent factors are considered and that a mutually acceptable transportation solution will result. Any comments or suggestions you may have concerning alternatives to be studied or potential social, economic, and environmental impacts associated with this project are welcome.

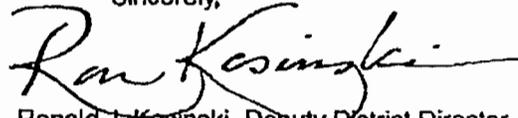

A Public Scoping Meeting will be held on September 9, 2004 at the Wilmington Senior Center located at 1371 Eubank Ave., Wilmington, CA 90744 from 5:30pm to 7:30pm. This will be an informal meeting with displays available for review; questions and comments will also be solicited.

We will be pleased to have your ongoing participation on this project. Please send any written comments by September 30, 2004 to:

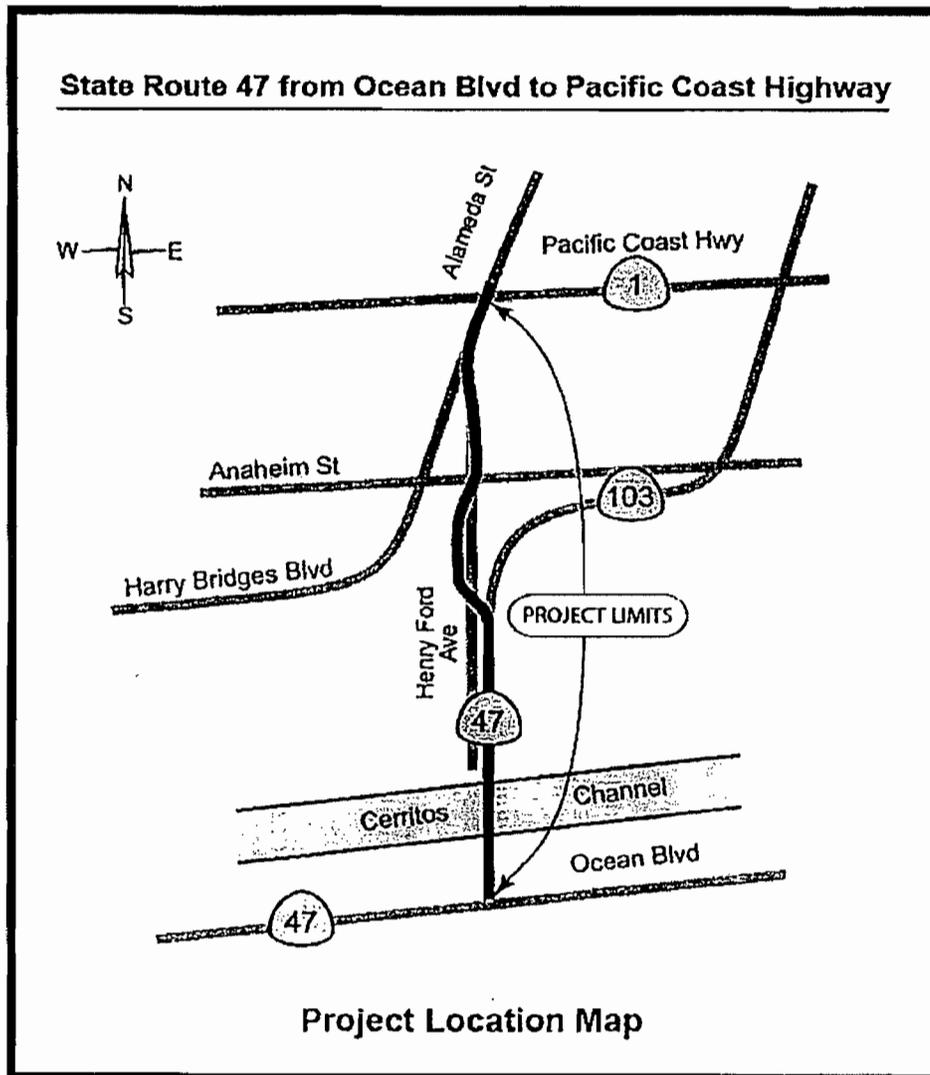

Mr. Ronald J. Kosinski, Deputy District Director
Division of Environmental Planning (LA 47 KP 4.5/8.5 (PM 2.8/5.3))
Caltrans
120 S. Spring Street (MS 16A)
Los Angeles, CA 90012

If you have any questions please contact Karl Price at (213) 897-1839 (e-mail: Karl_Price @dot.ca.gov). Caltrans would like to thank you for your participation and interest in this transportation project study.

Sincerely,

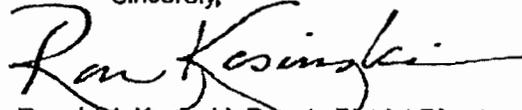

Ronald J. Kosinski, Deputy District Director
Division of Environmental Planning

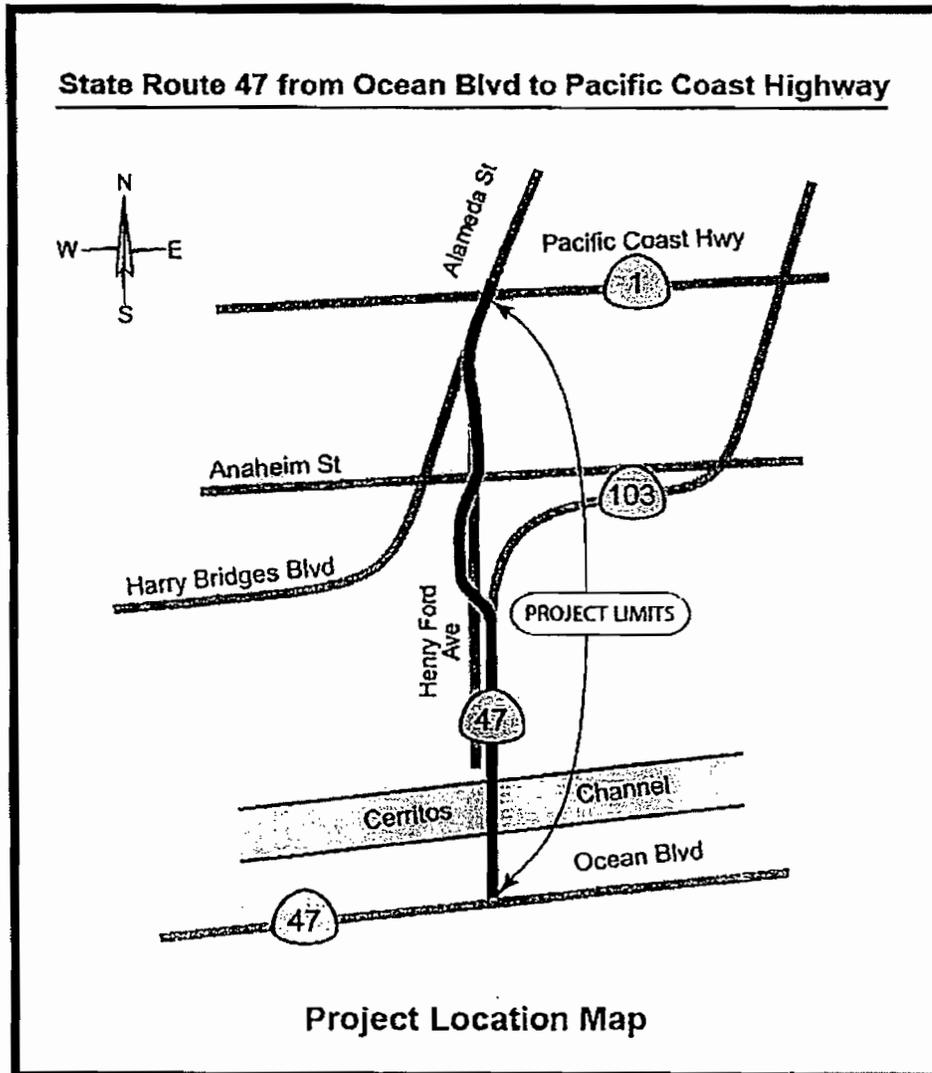

If you have any questions please contact Karl Price at (213) 897-1839 (e-mail: Karl_Price @dot.ca.gov). Caltrans would like to thank you for your participation and interest in this transportation project study.

Sincerely,

Ronald J. Kosinski, Deputy District Director
Division of Environmental Planning

Fuchs, including the Fuchs Electronics Division of Reunert Limited effective February 27, 1997 (*see* 62 FR 13933, March 24, 1997).

A Federal Register notice was published on March 4, 1998 (63 FR 10672) which temporarily suspended the statutory debarment against Fuchs. The Consent Agreement explicitly provided that if the compliance programs or any other parts of the agreement were not fully adhered to, debarment could be re-imposed. The Agreement also stated that the company would establish an internal compliance program and would provide an amount of money equivalent to suspended civil fines to the South African Government to support the effective implementation of its national export control regime.

Section 38(g)(4) of the AECA permits rescission of debarment after consultation with the Secretary of the Treasury and after a thorough review of the circumstances surrounding the conviction and a finding that appropriate steps have been taken to mitigate any law enforcement concerns.

The Department of State has determined that Fuchs (Pty) Ltd has taken appropriate steps to address the causes of the violations and mitigate any law enforcement concerns. Therefore, in accordance with section 38(g)(4) of the AECA and section 127.11 of the ITAR, effective July 14, 2004, the debarment against Fuchs, including the Fuchs Electronics Division of Reunert Limited, is rescinded. The effect of this notice is that Fuchs, and any divisions, subsidiaries, associated companies, affiliated persons, and successor entities may participate without prejudice in the export or transfer of defense articles, related technical data, and defense services subject to section 38 of the AECA and the ITAR.

Dated: July 14, 2004.

Lincoln P. Bloomfield, Jr.,

Assistant Secretary, Bureau of Political-Military Affairs, Department of State.

[FR Doc. 04-16589 Filed 7-23-04; 8:45 am]

BILLING CODE 4710-25-P

DEPARTMENT OF STATE

[Public Notice 4744]

Advisory Committee on International Communications and Information Policy Meeting Notice

The Department of State announces the next meeting of its Advisory Committee on International Communications and Information Policy (ACICIP), to be held on Wednesday, August 18, from 9 a.m.

until 11:30 a.m., in Room 1406 of the Harry S Truman Building of the U.S. Department of State. The Truman Building is located at 2201 C Street, NW., Washington, DC 20520.

The committee provides a formal channel for regular consultation and coordination on major economic, social and legal issues and problems in international communications and information policy, especially as these issues and problems involve users of information and communications services, providers of such services, technology research and development, foreign industrial and regulatory policy, the activities of international organizations with regard to communications and information, and developing country issues.

Ambassador David A. Gross, Deputy Assistant Secretary and U.S. Coordinator for International Communications and Information Policy, will attend the meeting together with others from the Office of Communications and Information Policy at the Department of State. Items on the agenda will include Amb. Gross's forthcoming visit to China, issues on the agenda of the October meeting of the World Telecommunications Standards Assembly, reports from the sub-committees of ACICIP, international actions concerning spam, the recent preparatory meeting for Phase II of the World Summit on the Information Society, emerging technologies, and other key multilateral and bilateral issues on the agendas of meetings this fall. Amb. Gross would also like to solicit ideas from ACICIP on current issues facing the telecommunications and information sectors.

Members of the public may attend the meeting up to the seating capacity of the room. While the meeting is open to the public, admittance to the Department of State building is only by means of a pre-arranged clearance list. In order to be placed on the pre-clearance list, those interested in attending must provide name, title, affiliation, social security number, date of birth and citizenship to Avis Alston at AlstonAC@state.gov no later than 5:00 p.m. on Monday, August 16. All attendees must enter by the 23rd Street entrance. One of the following valid identifications will be required for admittance: Any U.S. driver's license with photo, a passport, or a U.S. government agency ID. For security reasons, all those attendees who do not have U.S. government agency IDs must be escorted by Department of State personnel at all times when in the building.

For further information, please contact Elizabeth W. Shelton, Executive

Secretary of the Committee at (202) 647-5233, or at SheltonEW@State.gov.

Dated: July 20, 2004.

Elizabeth W. Shelton,

Executive Secretary, ACICIP, Department of State.

[FR Doc. 04-16972 Filed 7-23-04; 8:45 am]

BILLING CODE 4710-07-P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Los Angeles County, CA

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will be prepared for a proposed highway project in Los Angeles County, California.

FOR FURTHER INFORMATION CONTACT: César Pérez, Team Leader—South Region, Federal Highway Administration, 650 Capitol Mall, Suite 4-100, Sacramento, California 95814 Telephone (916) 498-5065.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the California Department of Transportation (Caltrans) and the Alameda Corridor Transportation Authority (ACTA), will reinstate environmental studies and prepare an Environmental Impact Statement (EIS) on a proposal to improve State Route 47 (SR-47) in Los Angeles County, California. The proposed improvement would involve replacing the seismically deficient Schuyler Heim Bridge with a new fixed-span bridge and the construction/extension of SR-47 as a new four-lane elevated expressway from the new Heim Bridge along Alameda Street to Pacific Coast Highway (State Route 1). The new fixed-span bridge would change the current vertical and horizontal clearances through the Cerritos Channel. The elevated expressway would provide a direct route from Terminal Island to Alameda Street, resulting in the elimination of five at-grade railroad crossings and ultimately reduce truck traffic on Interstates 710 and 110.

During 2002, Caltrans and ACTA began formal public scoping and initiation of environmental studies for the proposed project. Notice letters were sent to Federal, State and local agencies on January 28, 2002. Notices were prepared in the *Federal Register* and local newspapers, advertising public scoping and open house meetings, on

February 13, 2002, at 2:30 p.m. and 4:30 p.m. respectively. Public comments were received until February 28, 2002. A review of subsequent environmental studies led to FHWA to conclude that an EIS would be required. Budgetary constraints then led Caltrans to temporarily suspend the project.

Major project elements to be evaluated in the EIS include: Replacement of the vertical-lift Schuyler Heim Bridge with a fixed-span bridge; construction of an elevated four-lane expressway to State Route 1; and, potential realignment of surface roads and ramps. The EIS will consider a variety of possible alignments for these improvements, as well as the "no-build" alternative.

Letters describing the re-initiation of studies and soliciting comments will be sent to appropriate Federal, State and local agencies and to private organizations and citizens who have previously expressed, or are known to have, an interest in this proposal.

Additional public scoping and open house meetings for the Draft EIS/EIR will be held at the Wilmington Senior Center located at 1371 Eubank Ave., Wilmington, California 90745. The public meetings will be held on September 9, 2004, at 2:30 p.m. and 5:30 p.m., respectively. In addition, a public hearing will be held following completion of the Draft EIS/EIR. A public notice will be published for the time and place of the hearing. The Draft EIS/EIR will be available for public and agency review and comment prior to the public hearing.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal program and activities apply to this program)

Issued on: July 20, 2004.

César E. Pérez,

South Region Team Leader, Federal Highway Administration, California Division.

BILLING CODE 4910-22-M

DEPARTMENT OF THE TREASURY

Internal Revenue Service

[EE-43-92]

Proposed Collection: Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104-13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning an existing final regulation, EE-43-92 (TD 8619), Direct Rollovers and 20-Percent Withholding Upon Eligible Rollover Distributions From Qualified Plans (§§ 1.401(a)(31)-1, 1.402(c)-2, 1.402(f)-1, 1.403(b)-2, and 31.3405(c)-1).

DATES: Written comments should be received on or before September 24, 2004 to be assured of consideration.

ADDRESSES: Direct all written comments to Glenn Kirkland, Internal Revenue Service, room 6411, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the regulation should be directed to Allan Hopkins, at (202) 622-6665, or at Internal Revenue Service, room 6407, 1111 Constitution Avenue NW., Washington, DC 20224, or through the Internet, at Allan.M.Hopkins@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Direct Rollovers and 20-Percent Withholding Upon Eligible Rollover Distributions From Qualified Plans.

OMB Number: 1545-1341.

Regulation Project Number: EE-43-92.

Abstract: This regulation implements the provisions of the Unemployment Compensation Amendments of 1992 (Pub. L. 102-318), which impose mandatory 20 percent income tax withholding upon the taxable portion of certain distributions from a qualified pension plan or a tax-sheltered annuity that can be rolled over tax-free to another eligible retirement plan unless such amounts are transferred directly to such other plan in a "direct rollover" transaction. These provisions also require qualified pension plans and tax-

sheltered annuities to offer their participants the option to elect to make "direct rollovers" of their distributions and to provide distributees with a written explanation of the tax laws regarding their distributions and their option to elect such a rollover.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals, business or other for-profit organizations, not-for-profit institutions, and Federal, State, local or tribal governments.

Estimated Number of Respondents: 10,323,926.

Estimated Time per Respondent: 13 minutes.

Estimated Total Annual Burden Hours: 2,129,669.

The following paragraph applies to all of the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: July 15, 2004.

Glenn Kirkland,

IRS Reports Clearance Officer.

[FR Doc. 04-16965 Filed 7-23-04; 8:45 am]

BILLING CODE 4830-01-P

SMALL BUSINESS ADMINISTRATION**Small Business Size Standards:
Waiver of the nonmanufacturer rule****AGENCY:** Small Business Administration.**ACTION:** Notice of waiver of the nonmanufacturer rule for aluminum, sheet, plate, and foil manufacturing.

SUMMARY: The U.S. Small Business Administration (SBA) is granting a waiver of the Nonmanufacturer Rule for Aluminum, Sheet, Plate, and Foil Manufacturing. The basis for waivers is that no small business manufacturers are supplying these classes of products to the Federal government. The effect of a waiver would be to allow otherwise qualified regular dealers to supply the products of any domestic manufacturer on a Federal contract set aside for small businesses or awarded through the SBA 8(a) Program.

DATES: This waiver is effective on June 23, 2004.**FOR FURTHER INFORMATION CONTACT:**

Edith Butler, Program Analyst, by telephone at (202) 619-0422; by FAX at (202) 205-7280; or by e-mail at edith.butler@sba.gov.

SUPPLEMENTARY INFORMATION: Section 8(a)(17) of the Small Business Act, 15 U.S.C. 637(A)(17), requires that recipients of Federal contracts set aside for small businesses or SBA 8(a) Business Development Program provide the product of a small business manufacturer or processor, if the recipient is other than the actual manufacturer or processor. This requirement is commonly referred to as the Nonmanufacturer Rule. The SBA regulations imposing this requirement are found at 13 CFR 121.406 (b). Section 8(a)(17)(b)(iv) of the Act authorizes SBA to waive the Nonmanufacturer Rule for any "class of products" for which there are no small business manufacturers or processors in the Federal market.

As implemented in SBA's regulations at 13 CFR 121.1204, in order to be considered available to participate in the Federal market on these classes of products, a small business manufacturer must have submitted a proposal for a contract solicitation or received a contract from the Federal government within the last 24 months. The SBA defines "class of products" based on six digit coding systems. The first coding system is the Office of Management and Budget *North American Industry Classification System (NAICS)*. The second is the Product and Service Code established by the Federal Procurement Data System.

The SBA received a request on April 16, 2004 to waive the Nonmanufacturer

Rule for Aluminum, Sheet, Plate, and Foil Manufacturing. In response, on May 4, 2004, SBA published in the Federal Register a notice of intent to grant the waiver of the Nonmanufacturer Rule for Aluminum, Sheet, Plate, and Foil Manufacturing. SBA explained in the notice that it was soliciting comments and sources of small business manufacturers of this class of products. In response to this notice, no comments were received from any interested party. SBA has determined that there are no small business manufacturers of this class of products, and is therefore granting a waiver of the Nonmanufacturer Rule for Aluminum, Sheet, Plate, and Foil Manufacturing, NAICS 331315.

Dated: June 2, 2004.

Barry S. Meltz,

*Acting Associate Administrator for
Government Contracting.*

BILLING CODE 8025-01-P

DEPARTMENT OF TRANSPORTATION**Federal Highway Administration****Environmental Impact Statement: Los
Angeles County, CA****AGENCY:** Federal Highway Administration (FHWA), DOT.**ACTION:** Notice of Intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will be prepared for a proposed highway project in Los Angeles County, California.

FOR FURTHER INFORMATION CONTACT:

César Pérez, Team Leader—South Region, Federal Highway Administration, 650 Capitol Mall, Suite 4-100, Sacramento, California 95814, Telephone (916) 498-5065.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the California Department of Transportation (Caltrans) and the Alameda Corridor Transportation Authority (ACTA), will reinitiate environmental studies and prepare an Environmental Impact Statement (EIS) on a proposal to improve State Route 47 (SR-47) in Los Angeles County, California. The proposed improvement would involve replacing the seismically deficient Schuyler Heim bridge with a new fixed-span bridge and the construction/extension of SR-47 as a new four-lane elevated expressway from the new Heim bridge along Alameda Street to Pacific Coast Highway (State Route 1). The new fixed-span bridge would change the

current vertical and horizontal clearances through the Cerritos Channel. The elevated expressway would provide a direct route from Terminal Island to Alameda Street, resulting in the elimination of five at-grade railroad crossings and ultimately reduce truck traffic on Interstates 710 and 110.

During 2002, Caltrans and ACTA began formal public scoping and initiation of environmental studies for the proposed project. Notice letters were sent to federal, state and local agencies on January 28, 2002. Notices were prepared in the *Federal Register* and local newspapers, advertising public scoping and open house meetings, on February 13, 2002, at 2:30 p.m. and 4:30 p.m., respectively. Public comments were received until February 28, 2002. A review of subsequent environmental studies led the FHWA to conclude that an EIS would be required. Budgetary constraints then led Caltrans to temporarily suspend the project.

Major project elements to be evaluated in the EIS include: Replacement of the vertical-lift Schuyler Heim Bridge with a fixed-span bridge; construction of an elevated four-lane expressway to State Route 1; and, potential realignment of surface roads and ramps. The EIS will consider a variety of possible alignments for these improvements, as well as the "no-build" alternative.

Letters describing the re-initiation of studies and soliciting comments will be sent to appropriate Federal, State and local agencies and to private organizations and citizens who have previously expressed, or are known to have, an interest in this proposal. Additional public scoping meeting(s) for the EIS will be provided, as appropriate. Comments received during the prior scoping period (January 28 through February 28, 2002) will also be considered. In addition, a public hearing will be held following completion of the draft EIS. Public notice will be given of the time and place for the hearing. The draft EIS will be available for public and agency review and comments prior to the public hearing.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided above.

BILLING CODE 4910-22-M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Suffolk County, NY

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will be prepared for a proposed highway project in Suffolk County, New York.

FOR FURTHER INFORMATION CONTACT:

Subimal Chakraborti, P.E., Regional Director, NYSDOT Region 10; State Office Building; 250 Veterans Memorial Highway; Hauppauge, NY 11788; Telephone: (631) 952-6632.

or

Robert E. Arnold, Division Administrator, Federal Highway Administration, New York Division, Leo W. O'Brien Federal Building, Room 719, Clinton Avenue and North Pearl Street, Albany, New York 12207, Telephone: (518) 431-4127.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the New York State Department of Transportation (NYSDOT) will prepare an environmental impact statement (EIS) on a proposal to reconstruct NYS Route 347 (Project Identification Number 0054.05) in Suffolk County, New York. The proposed improvements will involve the reconstruction of approximately 15 miles of the existing route from Northern State Parkway to RTE 25A in the Towns of Smithtown, Islip and Brookhaven and through the incorporated Village of Lake Grove. The improvements considered are necessary to provide for the existing and projected traffic demand along Route 347 and to improve safety. Also, included in this proposal are two new ramps on Northern State Parkway and three new grade separation improvements on Route 347 at the intersections of Route 454, Route 25 and Nicolls Road.

Alternatives under consideration include: (1) Taking no action; (2) Eight lane Arterial from Northern State Parkway to Route 454 and six lane

arterial east of Route 454 to Route 25A with three grade separations and two new ramps on Northern State Parkway.

Letters describing the proposed action and soliciting comments will be sent to appropriate Federal, State, and local agencies, and to private organizations and citizens who have previously expressed interest in this proposal. Public information meetings will be held in the Towns of Smithtown and Brookhaven between winter of 2004 and summer of 2006. In addition, a public hearing will be held. Public notice will be given of the time and place of the meetings and hearing. The draft EIS, when prepared, will be available for public and agency review and comment. Early public involvement and coordination efforts to identify the range of reasonable alternatives and social, economic and environmental issues to be addressed resulted in a Route 347 Corridor Study Report completed in December 2001. Also, public meetings were held for this project in May of 2002 as part of the scoping process. No additional NEPA scoping meetings are planned at this time.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the NYSDOT or FHWA at the addresses provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

[STB Finance Docket No. 34505]

East Brookfield & Spencer Railroad, LLC—Lease and Operation Exemption—CSX Transportation, Inc.

East Brookfield & Spencer Railroad, LLC (EB&SR), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to lease, from CSX Transportation, Inc. (CSXT), and operate

approximately 4 miles of rail line. The line is a portion of CSXT's passing track located between mileposts 60 and 64 in East Brookfield and Spencer, Worcester County, MA, together with approximately 270 feet of lead track running from the passing track at milepost 63.08 to the property line of the proposed New England Automotive Gateway Facility (Facility) in East Brookfield, MA.¹

EB&SR certifies that its projected revenues as a result of this transaction will not exceed those that would qualify it as a Class III rail carrier and states that such revenues will not exceed \$5 million annually. The transaction was scheduled to be consummated on May 19, 2004.

If the verified notice contains false or misleading information, the exemption is void *ab initio*. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the transaction.

An original and 10 copies of all pleadings, referring to STB Finance Docket No. 34505, must be filed with the Surface Transportation Board, 1925 K Street, NW., Washington, DC 20423-0001. In addition, a copy of each pleading must be served on Betty Jo Christian, Steptoe & Johnson, LLP, 1330 Connecticut Ave., NW., Washington, DC 20036.

Board decisions and notices are available on our Web site at <http://www.stb.dot.gov>.

Decided: June 1, 2004.

By the Board, David M. Konschnik, Director, Office of Proceedings.

Vernon A. Williams,

Secretary.

BILLING CODE 4915-01-P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Proposed Extension of Information Collection; Comment Request

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federa-

¹ As part of the lease agreement between CSXT and EB&SR, CSXT will retain certain rights to operate over the line to serve the Facility, and to use the track in the event of an operating emergency.

NOTICE OF PREPARATION

TO: The State Clearinghouse
1400 Tenth Street
Sacramento, CA 95814

FROM: California Department of
 Transportation, District 7
 Division of Environmental Planning
 120 South Spring Street
 Los Angeles, CA 90012

SUBJECT: Notice of Preparation of a Draft Environmental Impact Report
 for the Schuyler Heim Bridge Replacement and Alameda Corridor Truck
 Expressway Project
 [References: Division 13, Public Resources Code, Section 21080.4]

This is to inform you that the California Department of Transportation (Caltrans) and the Federal Highway Administration (FHWA) will act as Lead Agencies under the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA), respectively, for the proposed project described below. These agencies will prepare a joint Environmental Impact Report (EIR) and Environmental Assessment (EA). Your participation as a responsible/trustee/cooperating agency is requested in the preparation and review of this document.

We need to know the applicable permit and environmental review requirements of your agency and the scope and content of the environmental information that is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency will need to use the EIR/EA when considering your permit or other approval for the project.

Project Title: Schuyler Heim Bridge Replacement and Alameda Corridor Truck Expressway Project (Ocean Boulevard to Pacific Coast Highway)

Project Location: Cities of Long Beach and Los Angeles, Los Angeles County, California.

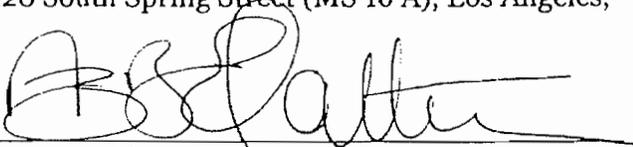

Project Description: The proposed project consists of replacement of the Schuyler Heim Bridge (Bridge Number 53-2618) over the Cerritos Channel at the Port of Long Beach and construction of an elevated truck expressway between the Schuyler Heim Bridge and Pacific Coast Highway (State Route [SR] 1) in the Wilmington community of Los Angeles. For further information about the project, see the attached "Additional Project Information" and the "Initial Study" checklist.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but no later than 30 days after receipt of this notice.

Please send your response and the name of a contact person in your agency, as well as any comments or questions regarding this project to Ronald Kosinski, Deputy District Director, Division of Environmental Planning, Caltrans, 120 South Spring Street (MS 16 A), Los Angeles, CA 90012.

Additional Project Information

Purpose and Need of Project

The purpose of the proposed project is to replace the seismically inadequate Schuyler Heim Bridge and improve the SR 47/Henry Ford Avenue/Alameda Street transportation corridor by constructing an elevated truck expressway from the Schuyler Heim Bridge to SR 1.

The Schuyler Heim Bridge is one of only three bridges that connects the mainland with Terminal Island in the Ports of Long Beach and Los Angeles, which are the two largest ports in the United States, based on cargo volume. This bridge currently accommodates three 3.3- to 3.6-meter (m) (11- to 12-foot) lanes in each direction (no shoulders). The Schuyler Heim Bridge is a steel vertical lift bridge that is a popular route for truck traffic because of its relatively short and low sustained longitudinal grades; therefore, it has become a vital truck traffic link between the ports and the mainland. Because it is a vital transportation link, and due to a state mandate, the Schuyler Heim Bridge must sustain a Maximum Credible Earthquake (MCE) without collapsing.

Currently, the Schuyler Heim Bridge is in need of seismic retrofitting and major maintenance work. A previous study¹ evaluating the seismic retrofit and maintenance of the bridge determined that replacement of the bridge would be a more economically feasible alternative.

The Alameda Corridor Truck Expressway (SR 47) would be a four-lane facility constructed above Henry Ford Avenue and Alameda Street that would provide a link between the Terminal Island Freeway (SR 103) and Alameda Street. The purpose of the project is to provide a high capacity alternative route for truck traffic between Terminal Island and SR 91. The new expressway would cross over existing rail crossings and Anaheim Street. It would alleviate existing congestion on Interstate (I)-710, I-110, and local north-south streets by providing a desirable alternative route for truck traffic, and it would eliminate the heavy truck/rail conflicts that presently exist south of SR 1 at existing grade crossings.

Alternatives for the bridge replacement and truck expressway are discussed further in the next section.

Alternatives to be Evaluated

The project to be evaluated in the EIR/EA would be comprised of the replacement of the existing Schuyler Heim Bridge and construction of the Alameda Corridor Truck Expressway. Two build alternatives are being considered for the Schuyler Heim Bridge replacement, and two build alternatives are being considered for the Expressway. The alternative combinations will be evaluated in detail in the EIR/EA. The bridge replacement and truck expressway alternatives are described below.

Bridge Alternatives

Each of the alternatives listed, with the exception of the No Project Alternative, include the replacement of the existing steel vertical lift bridge with a concrete fixed bridge. In addition to the two build horizontal alignments, there are two vertical clearance options, as well as three channel-width options described below.

Bridge Alternative 1 – Existing Alignment Alternative. This alternative would replace the existing bridge with a fixed bridge within the existing alignment. The proposed fixed bridge would be wider than the existing bridge and would consist of three 3.6-m (12-foot) lanes with 3-m

¹ California Department of Transportation. *Schuyler Heim Bridge Update: Summary of CTC Briefing*. January 1999.

(10-foot) shoulders in each direction. The footprint of the fixed bridge would be widened toward the east side to avoid impacts to the railroad located immediately to the west. This fixed bridge replacement alternative would include the following vertical clearance and channel width variations:

- **Vertical Clearance Option A.** The proposed vertical clearance of the bridge would be at 11.6 m (38 feet) over Mean High Water Level (MHWL) of 1.43 m (4.7 feet). This maintains the same clearance as when the existing lift bridge is in the lowered position.
- **Vertical Clearance Option B.** The proposed vertical clearance of the bridge would be increased to 14.3 m (47 feet) over MHWL level. This profile accommodates a 13.7-m (45-foot) fireboat.
- **Channel Width Option A.** The width of the navigable channel would remain at 54.9 m (180 feet).
- **Channel Width Option B.** The width of the navigable channel would be decreased to between 42.7 and 44.2 m (140 to 145 feet).
- **Channel Width Option C.** The width of the navigable channel would be decreased to between 24.4 and 25.9 m (80 to 85 feet).

Bridge Alternative 2 – Realignment Alternative. This alternative would replace the existing Schuyler Heim Bridge with a fixed bridge on an alignment east of the existing footprint. The replacement bridge would consist of three 3.6-m (12-foot) lanes with 3-m (10-foot) shoulders on each side. This fixed bridge replacement alternative would include the following vertical clearance and channel width variations.

- **Vertical Clearance Option A.** The proposed vertical clearance of the bridge would be at 11.6 m (38 feet) over MHWL of 1.43 m (4.7 feet). This maintains the same clearance as when the existing lift bridge is in the lowered position.
- **Vertical Clearance Option B.** The proposed vertical clearance of the bridge would be increased to 14.3 m (47 feet) over MHWL level. This profile accommodates a 13.7-m (45-foot) fireboat.
- **Channel Width Option A.** The width of the navigable channel would remain at 54.9 m (180 feet).
- **Channel Width Option B.** The width of the navigable channel would be decreased to 42.7 to 44.2 m (140 to 145 feet).
- **Channel Width Option C.** The width of the navigable channel would be decreased to 24.4 to 25.9 m (80 to 85 feet).

Truck Expressway Alternatives

A Feasibility Study evaluating the following two alternatives is currently being prepared for the Truck Expressway.

Truck Expressway Alternative 1. The expressway would be constructed along Henry Ford Avenue between the Schuyler Heim Bridge and SR 1. The expressway would be elevated 6 to 22.8 m (20 to 75 feet) above ground for a total of 2.7 kilometers (km) (1.7 miles) and would join Alameda Street just south of SR 1. It would be designed to Caltrans standards and have a design speed of approximately 45 miles per hour (mph). Two lanes in each direction would be provided and right-of-way would be required along the east side of Alameda Street, north and south of SR 1,

affecting approximately 25 parcels. Permanent easements would also be required at certain locations for the elevated portions of the expressway. The project would also include minor street and intersection improvements on Alameda Street between SR 1 and SR 91. This alternative would keep SR 103 as the primary route, but it would construct new on- and off-ramps that link the existing SR 103 to the new truck expressway, just north of the Schuyler Heim Bridge, to allow trucks to travel on the expressway as an alternative. Construction of the expressway is not anticipated to significantly impact existing freeway or truck traffic.

Truck Expressway Alternative 2. This alternative differs from the first in that the Alameda Corridor Truck Expressway would become the primary route and would extend directly from the Schuyler Heim Bridge. On- and off-ramps would be constructed linking the new truck expressway to the existing SR 103, just north of the Schuyler Heim Bridge, to allow trucks to travel on SR 103 as an alternative. All other features listed for Truck Expressway Alternative 1 are the same for this alternative.

Environmental Setting

The proposed project is located in an industrialized area in and near the Ports of Long Beach and Los Angeles. The area is highly developed and includes land uses such as industrial shipyards and oil wells and refineries.

SR 47 crosses the Cerritos Channel at the Schuyler Heim Bridge. The channel is primarily used as a deep water path for the transport of goods between the Los Angeles and Long Beach harbors. It is approximately 99 m (325 feet) wide, with a depth ranging from 0.0 m/feet at the sides to about 15.2 m (50 feet) in the center. The existing vertical clearance of the bridge in its lowered position is 11.6 m (38 feet) over the MHWL, and it is 49.7 m (163 feet) over the MHWL in its raised position. The existing width of the channel beneath the bridge is 54.9 m (180 feet). There is no vegetation on the banks of the channel; therefore, it does not qualify as a federal/state wetland.

Environmental Effects

A preliminary Environmental Checklist has been prepared for this project and potential impacts to the following environmental factors have been identified: aesthetics, biological resources, hazards and hazardous materials, public services, cultural resources, hydrology/water quality, noise, air quality, geology/soils, land use/planning and transportation/traffic. The level of impact will vary depending on the alternatives selected

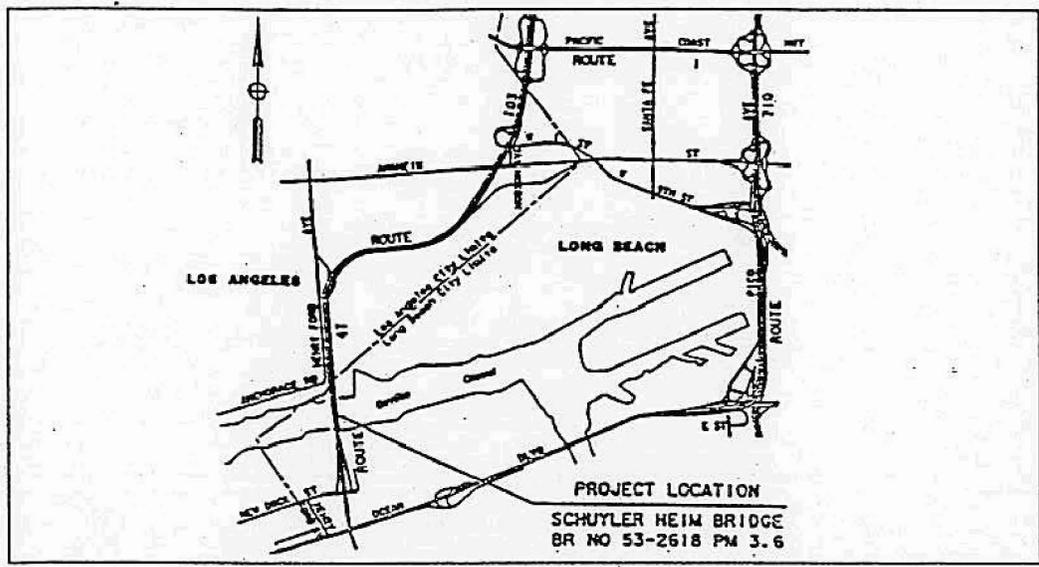

Scoping Meeting

A scoping meeting will be held to discuss environmental and other project-related issues on February 13, 2002, at 3:00 P.M. at the Port of Long Beach Administrative Building located at 925 Harbor Plaza, Long Beach, CA 90802.

I. INTRODUCTION

The Commodore Schuyler Heim Bridge (Bridge No. 53-2618) on Route 47, is one of the three bridges that connect the mainland and Terminal Island in the Ports of Long Beach/Los Angeles area. The Department of Transportation, District 7 is proposing to retrofit this bridge as a part of a statewide program to improve the seismic safety of those bridges under the responsibility of the Department. The seismic retrofit of this structure will provide a much higher level of security against the loss of this transportation vital link. Because of its original design with a lift span in the center, this bridge presents the advantage over the other two bridges (Vincent Thomas and Gerald Desmond) of having shorter and lower sustained longitudinal grades which makes it more attractive especially for the predominant truck traffic in the area.

The criteria for establishing the scope and extent of the Schuyler Heim Bridge retrofit was the "No Collapse" under the Maximum Credible Earthquake (MCE). This implies that the operation of the lift span is not required following the design seismic event; therefore, all structural evaluations were performed assuming that the lift span was in the down position.

Designed in 1946, the Schuyler Heim Bridge carries three lanes each of northbound and southbound traffic across the Cerritos Channel into and out of Terminal Island. The structure portion design was developed through a service contract by the Engineering Consulting Firm, DeLeuw Cather & Co. under the supervision of Caltrans Office of Structures.

In addition to the seismic retrofit solution proposed, four other alternatives were considered, as follows:

- 1) a fixed (non-lift) bridge parallel to and offset from the existing bridge alignment,
- 2) a fixed bridge following the same general alignment as the existing bridge,
- 3) a vertical lift moveable bridge parallel to and offset from the existing alignment, and
- 4) a vertical lift moveable bridge following the same general alignment as the existing bridge.

The fixed bridge alternatives were not pursued due to objections from the US Coast Guard and the Ports of Los Angeles and Long Beach due to vertical clearance and right of way constraints.

The offset vertical lift bridge alternative required significant permanent right of way acquisitions and was also abandoned.

The vertical lift moveable bridge alternative was developed by keeping the original bridge alignment as much as possible. This alternative although considered by the Ports, required a temporary detour, fixed bridge, parallel to the existing one, interim retrofit of the approach spans, and additional right of way at a prohibitive cost.

This alternative had a cost estimate of \$ 180,000,000 which included interim retrofit of the approach spans.

This Project Scope Summary Report (PSSR) is being prepared to program, fund, and schedule a seismic retrofit project of one structure on Route LA-47. This project is in the legislatively mandated seismic retrofit program.

II. RECOMMENDATION

It is recommended that the seismic retrofit proposals described below be approved.

III. LOCATION AND PROBLEM

This seismic retrofit project proposes work on the following structure which does not meet present standards for seismic resistance:

<u>Location</u>	<u>PM</u>	<u>Bridge No.</u>	<u>Bridge Name</u>
7-LA-47	3.6/4.3	53-2618	Schuyler Heim Bridge

IV. PROPOSALS

This project proposes to provide the following:

A. Truss Bridge

- Tower pier foundation retrofit
- Truss pier foundation retrofit
- Reconstruct timber fenders
- Reconstruct steel sheet pile bulkhead
- Driving of 3' diameter CIDH piles for slope stabilization
- Tower retrofit
- Top laterals retrofit
- Bottom laterals retrofit
- Tower anchorage retrofit
- Truss bearing retrofit
- Lateral restraint retrofit

B. Approach Structures

- Class "F" column retrofit
- Column strengthening
- Longitudinal and transverse footing retrofit
- Bearing retrofit
- Steel cap and deck connection strengthening
- Footing cap strengthening
- Abutment retrofit
- Bearing retrofit
- Lateral bracing

- Hinge retrofit
- End cross bracing retrofit

V. COST ESTIMATES

<u>Bridge No.</u>	<u>Structure</u>	<u>Roadway</u>	<u>Electrical</u>	<u>Supp. Work</u>	<u>Total</u>
53-2618	43,819,000	840,000	1,350,300	623,000	\$46,632,300

VI. PROJECT SCHEDULES

Strategy Meeting	12/4/96
Project Scope Summary Report Approval	08/98
Structure PS&E to District	08/98
District PS&E to Office Engineer	08/98
Ready to List	08/98
Advertisement	08/98
Construction Complete	10/00

VI. PROJECT FACTORS

A. Environmental

The project Environmental Document to clear this project is ND/FONSI. The soils at the north and south approaches are contaminated at some of the bent locations with lead and petroleum hydrocarbons. Quality of the groundwater was also evaluated for discharge/disposal purposes. Mitigation measures will be implemented in accordance to findings and recommendations of Site Investigation Report and National Pollutant Discharge Elimination System (NPDS) permit requirements.

The superstructure is painted with lead based paint. Containment and monitoring will be necessary.

B. Right of Way

Permanent and temporary easements will be required. There is railroad facilities involvement. The railroad is owned and controlled by the Port of Long Beach.

C. Utilities

The following utilities are in the vicinity of the retrofit work, but have no conflict with this project as cleared by the Utility Engineer:

- 6" So Cal gas line west of the existing piers
- Submarine cables for Southern California Edison
- Submarine cables for W.U. & U.P.R.R.
- 2-35KV Department of Water and Power submarine cables
- Submarine cables for W.U. & U.P.R.R.
- Submarine communication cables between Schuyler Heim and Henry Ford

- Bridges. These cables are abandoned.
- 2-6" DU electrical cable

D. Permits

The following permits will be required:

- Port of Long Beach Harbor Development Permit
- Army Corps of Engineers
- U.S. Fish and Wildlife Service
- California Department of Fish and Game
- Regional Water Quality Control Board

E. Traffic Control

The retrofit work will require:

- Partial lane closure and/or lane re-striping
- Temporary lane re-striping of roadways crossing the bridge during work on the underside of the deck
- Coordination with the railroad companies during work at the rail lines
- Full closure of bridge for 8 hour periods to reconstruct the lift span bearings
- 8-48 hour, 48-4 hour and 1-8day periods of lift span closures for shipping traffic in the channel

F. Concurrent Work

There is an ongoing construction project for Bridge Deck Replacement (Contract No. 07-4C51040) and a Minor B Project is currently programmed for the 97/98 FY to modify traffic signals and overhead signs at this bridge (Contract No. 4M2501). Other contracts north and south of the project under the administration of the Port of Long Beach, and the Vincent Thomas Bridge retrofit project.

G. Landscaping

No landscaping will be required for this project.

VIII. PROJECT FUNDING

This project will be funded from the Structure Seismic Retrofit (HA4S) Fund Reservations by SHOPP Amendment following approval of this PSSR. Construction cost will be programmed in the 98/99 fiscal year at a total project cost of \$46,700,000.

Finding of No Significant Impact

for

Route 47 - Schuyler Heim Bridge Seismic Retrofit Project

Los Angeles County, California

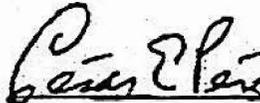

The proposed project involves the Seismic retrofit of the Commodore Schuyler Heim Bridge. The structure is one of the three bridges that connect Terminal Island to the mainland in the Los Angeles/Long Beach Harbor complex.

The Federal Highway Administration (FHWA) has determined that this project will not have any significant impact on the human environment. This finding of no significant impact is based on the attached Environmental Assessment(EA) and the information provided by Caltrans, which has been evaluated by the FHWA and determined to adequately discuss the environmental issues and impacts of the proposed project. It provides sufficient evidence and analysis for determining that an environmental impact statement is not required.

The FHWA takes responsibility for the scope and content of the attached environmental assessment.

Date

For Jeffrey A. Lindley
Division Administrator, FHWA

SS#P17889

NEGATIVE DECLARATION

(CEQA)

Pursuant: Division 13, Public Resources Code

Description: The proposed project involves the seismic retrofit of the Commodore Schuyler Heim Bridge. This structure is one of three bridges that connect Terminal Island to the mainland in the Los Angeles/Long Beach Harbor complex. The retrofit, which will be carried out as part of the statewide seismic retrofit program, will enhance the ability of this bridge to withstand a major earthquake.

Determination: An Initial Study has been prepared by the California Department of Transportation (Caltrans). On the basis of this study it is determined that the proposed action will not have a significant effect upon the environment for the following reasons:

1. There will be no significant effects on businesses, residences, schools, or public facilities, neighborhoods, employment, or the area economy.
2. Potential significant effects on unique or significant natural features, including but not limited to, threatened or endangered species, their habitat or movement, can be mitigated to a level of insignificance.
3. Potential significant effects on architectural, cultural or historic properties, park lands, recreation or scenic areas can be mitigated to a level of insignificance.
4. There will be no significant effect on noise, air quality or water quality.
5. There will be no effect on growth or require public services beyond those proposed for the near future.
6. There will be no significant effect on prime agricultural land or floodplains.

- NOTES:**
- Elevations are from 1996 survey and are based on Elev 16.666 ft painted at the Bench Mark located near Pier 29. B.M. elevation is based on Part of Los Angeles Datum which is mean lower low water level based on the observations for the years 1924-1932 by the National Geodetic Survey (N.G.S.), formerly the United States Coast Guard and Geodetic Survey (U.S.C. AND G.S.). A large subsidence ranging from 6' to 11' has accrued since the construction of the structure. Due to site conditions, elevation of the monument is subject to change. Contractor shall verify elevations before and during construction.
 - For concrete strength & type limits, see "MISCELLANEOUS DETAILS" sheet.
 - Work on this structure will change the present horizontal clearances to the railroad tracks.
 - For Typical Sections, see "TYPICAL SECTIONS" sheet.
 - For Pile Data, see "GENERAL NOTES" sheet.
 - For hydrologic summary see "FOUNDATION PLAN NO. 6" sheet.
 - For identification of retrofit work, see "STRUCTURE PLAN" sheets.

	<p>This reduction would help offset marine vessel detour emissions.</p> <p>The protocols to be used would be consistent with the Carl Moyer Program, which is already being administered by the SCAQMD. However, this program is not available to projects such as Schuyler Heim Bridge Replacement and could not be used to actually implement this project's buy-back program. The Gateway Cities Diesel Fleet Modernization Program would be an example of a buyback program with similar reduction goals. Also, the POLA/POLB Clean Air Action Plan has a heavy duty truck buy back component. While participating in already existing programs might be preferable (and possible), it would not be necessary in order to accomplish heavy duty truck buy back. The heavy duty truck buy back could be done independently, though it would have to adhere to already accepted protocols (SCAQMD).</p> <p>A heavy duty truck buyback program would consist of three steps: 1) identify target vehicles based on year of make; 2) provide incentives for operators to participate; and 3) establish a means to ensure that replacements meet the net improvement forecasted.</p>

	<p>The construction phase of this project is where the greatest impact of increased emission levels occurs. Therefore, the buyback program would be designed to mitigate the NO_x emissions during that time. Based on recent buyback programs, the program for the proposed project would cost from \$25,000 to \$50,000/ ton of NO_x reduced. This cost can vary significantly and will continue to increase as time passes. The number of tons mitigated would be based on marine vessel detour NO_x emissions during construction. The rerouting of shipping vessels during project construction would amount to 132.8 lbs NO_x per day, which is equivalent to 24.2 tons NO_x per year. The indirect marine vessel emissions would be mitigated to a level that is below the SCAQMD significance threshold for construction emissions.</p> <p>It is estimated that each truck replacement would reduce an average of 0.55 tons per year of NO_x and 0.12 tons per year of PM. This is based on emission factors representative of current buyback programs such as the Gateway Cities Diesel Fleet Modernization Program.</p> <p>These emission reductions would continue for 3 to 5 years, depending on the year of the truck updated. This timeframe would</p>

							Initial / Date		Initial / Date
	<ul style="list-style-type: none"> • Offsite mitigation. The goal of the offsite mitigation would be to augment existing peregrine populations. This could be accomplished by purchasing approximately 10 nestling peregrines from a captive breeding facility and have those young released (hacked) in an area of California where, when they disperse, they will possibly create a new nesting pair. • The local peregrine falcon population (approximately five pairs) would be monitored for 2 years. The pair located on the Schuyler Heim Bridge would be monitored to determine if they nest on the Badger Bridge, or if they integrate into other territories by filling a vacancy in another pair, or by usurping existing individuals in a pair. If offsite mitigation is conducted, hacked peregrine falcons would be monitored to determine their fate and if a new nesting pair is established. An experienced peregrine falcon biologist would conduct monitoring of the hacked peregrine falcons. 								
B-13	<p>Mitigating Loss of Special Status Plant Species</p> <p>Surveys for special-status plant species shall be conducted during flowering season prior to construction, at the PS&E stage. If special-status plant species are found and cannot be avoided</p>		ACTA Environmental, Construction Contractor, Resident Engineer, Project Manager	Design/1 year prior to construction, Construction	x

Schuyler Heim Bridge Replacement
and SR-47 Expressway Project
EA 238500

Notice of Public Hearing and Availability of Environmental Impact Report/Statement

The California Department of Transportation (Caltrans) has completed the Draft Environmental Impact Report/Statement (EIR/EIS) for the Schuyler Heim Bridge Replacement and SR-47 Expressway Project in the Ports of Long Beach and Los Angeles, California. The proposed alternatives include the replacement of the Schuyler Heim lifted bridge with a fix span bridge and either construction of an elevated SR-47 expressway from Terminal Island to Alameda Street (the new bridge will be a portion of the new expressway) or construction of an elevated SR-103 extension. There are six alternatives for the project that are discussed in the document.

A Public Hearing will be held to discuss the project on **September 25, 2007** from 6:00 p.m. to 8:00 p.m. at the Banning's Landing Community Center, located at 100 East Water Street, Wilmington, CA 90744. Project staff will be available to discuss the project and to answer any questions about the proposed project.

If an effort to save paper, the enclosed Draft EIR/EIS is being sent on CD along with a hard copy of the Document Summary. A hard copy of the document may also be viewed at the following locations:

- Caltrans, District 7, 100 S. Main Street, Los Angeles, CA 90012
- Wilmington Library, 1300 N. Avalon Blvd., Wilmington, CA 90744
- Carson Regional Library, 151 E. Carson St. Carson, CA 90745-2797
- Victoria Park Library. 17906 S. Avalon Blvd, Carson, CA 90746-1598
- San Pedro Regional Library, 931 S. Gaffey St. San Pedro, CA 90731
- Harbor City – Harbor Gateway Branch Library, 24000 S. Western, Harbor City, CA 90710
- Long Beach City Library – Harte Library: 1595 W. Willow Street, Long Beach, CA 90810
- Long Beach Main Library, 101 Pacific Avenue, Long Beach, CA 90802
- Mark Twain Neighborhood Library, 1325 E. Anaheim Street, Long Beach, CA 90813
- East Rancho Dominguez Library, 4205 E. Compton Blvd., East Rancho Dominguez, CA 90221-3664

The Draft EIR/EIS may also be accessed from our website:

<http://www.dot.ca.gov/dist07/resources/envdocs/> and through the Alameda Corridor Transportation Authority website at www.acta.org

We will be pleased to answer any questions you may have with regard to this project. It may be to your advantage to view the project plans at the Public Hearing to clarify any questions you may have about the proposals. Written comments on the Draft EIR/EIS must be submitted by **October 16, 2007**.

Please send your comments to:

Ronald J. Kosinski, Deputy District Director
Division of Environmental Planning
Department of Transportation, District 7
100 S. Main Street MS-16A
Los Angeles, CA 90012

If you have any questions, please contact Karl Price, (213) 897-1839. Thank you for your interest in this important transportation study.

Sincerely,

A handwritten signature in cursive script that reads "Ron Kosinski". The signature is written in black ink and is positioned above the printed name and title.

RON KOSINSKI
Deputy District Director, Caltrans District 7

Enclosures

stated. This document corrects the notice.

DATES: This action is effective August 24, 2007.

ADDRESSES: Copies of the documentation used in the notice being corrected are available for inspection during normal business hours at the following location: U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303-8960. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: Lynorae Benjamin, Air Quality Modeling and Transportation Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303-8960. The telephone number is (404) 562-9040. Ms. Benjamin can also be reached via electronic mail at Benjamin.Lynorae@epa.gov. The finding is available at EPA's conformity Web site: <http://www.epa.gov/otaq/stateresources/transconf/currships.htm>.

SUPPLEMENTARY INFORMATION:

Correction

EPA is correcting the error in the **Federal Register** notice, published on April 9, 2007 (72 FR 17550), which announced the adequacy finding for the 2006 MVEBs. In that notice on page 17550, in the third column, the table labeled "Atlanta 8-Hour Ozone MVEBs," EPA inadvertently identified the NO_x MVEB as 172.27 tpd and the VOC MVEB as 306.75 tpd. This action corrects that error. As announced in EPA's January 24, 2007, letter from Beverly Banister, Director of the Air, Pesticides and Toxics Management Division, to Heather Abrams, Chief of EPD's Air Protection Branch, the correct 2006 MVEBs for the Atlanta 8-Hour Ozone Area, as established by the Early Progress Plan, are provided in the following table.

ATLANTA 8-HOUR OZONE MVEBS
[Tons per day]

	2006
NO _x	306.75
VOC	172.27

Authority: 42 U.S.C. 7401 *et seq.*

Dated: August 16, 2007.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[ER-FRL-6690-3]

Environmental Impact Statements and Regulations; Availability of EPA Comments

Availability of EPA comments prepared pursuant to the Environmental Review Process (ERP), under section 309 of the Clean Air Act and section 102(2)(c) of the National Environmental Policy Act as amended. Requests for copies of EPA comments can be directed to the Office of Federal Activities at 202-564-7167.

An explanation of the ratings assigned to draft environmental impact statements (EISs) was published in the **Federal Register** dated April 6, 2007 (72 FR 17156).

Draft EISs

EIS No. 20070205, ERP No. D-AFS-L65537-WA. Tripod Fire Salvage Project, Proposal to Salvage Harvest Dead Trees and Fire-Injured Trees Expected to Die Within One Year, Methow Valley and Tonasket Ranger Districts, Okanogan and Wenatchee National Forests, Okanogan County, WA.

Summary: EPA does not object to the proposed project, but recommended expanding the purpose and need to include active restoration and monitoring survival of fire-damaged trees across the Tripod burn area to validate the proposed methodology for determining post fire tree mortality. Rating LO.

EIS No. 20070227, ERP No. D-NPS-K61166-CA. Golden Gate National Recreation Area, Proposed Marin Headlands and Fort Baker Transportation Infrastructure and Management Plan, Implementation, Marin County, CA.

Summary: EPA does not object with the proposed action. Rating LO.

EIS No. 20070239, ERP No. D-AFS-K65329-CA. Sugarberry Project, Proposes to Protect Rural Communities from Fire Hazards by Constructing Fuel Breaks Known as Defensible Fuel Profile Zones (DFPZs), Feather River Ranger District, Plumas National Forest, Plumas, Sierra, Yuba Counties, CA.

Summary: EPA expressed environmental concern about natural resource impacts, impacts to habitat fragmentation and cumulative effects. Rating EC2.

EIS No. 20070248, ERP No. D-SFW-F65068-WI. Trempealeau National Wildlife Refuge Comprehensive Conservation Plan, Implementation, located within the Mississippi River Valley, Buffalo and Trempealeau Counties, WI.

Summary: EPA does not object to the action as proposed. Rating LO.

EIS No. 20070257, ERP No. D-FHW-F40195-MN. Tier 1 DEIS—Trunk Highway (TH) 41 Minnesota River Crossing, Construction of a New Minnesota River Crossing Connecting U.S. Highway 169 to New US Highway 212, U.S. Army COE section 10 and 404 Permits, Scott and Carver Counties, MN.

Summary: EPA expressed environmental objections about impacts on calcareous fens and the low potential for successful mitigation. EPA also requested that a conceptual wetland mitigation plan be developed and included in the final EIS. Rating EO2.

Final EISs

EIS No. 20070249, ERP No. F-AFS-L65527-WA, Natapoc Ridge Restoration Project, To Improve Forest Health and Sustainability, and Reduce Wildfire and Hazardous Fuels, Wenatchee River Ranger District, Okanogan-Wenatchee National Forest, Chelan County, WA.

Summary: The Final EIS has addressed EPA's concerns about meeting the Aquatic Conservation Strategy objectives and sedimentation rates by including additional road improvements and aquatic resource mitigation measures.

EIS No. 20070259, ERP No. F-FHW-E40805-KY, Newtown Pike Extension Project, Road Connection from West Main Street to South Limestone Street in Lexington, Fayette County, KY

Summary: EPA expressed environmental concerns about impacts to floodplains. EPA is also concerned with hazardous waste remediation for contaminated soil as well as potentially significant cumulative impacts.

EIS No. 20070290, ERP No. F-RUS-H05025-MO, Norborne Baseload Power Plant, Proposed Construction and Operation of a 660-megawatt Net Coal-Fired Power Plant, Carroll County, MO

Summary: EPA continues to have environmental concerns about wetland/floodplain impacts and impacts from

ozone. EPA requested additional analysis of these issues be included in the Record of Decision.

EIS No. 20070165, ERP No. FS-NRS-D36121-WV. Lost River Subwatershed of the Potomac River Watershed Project, Construction of Site 16 on Lower Cove Run and Deletion of Site 23 on Upper Cove Run, US Army COE Section 404 Permit, Hardy County, WV.

Summary: EPA continues to have environmental concerns about potential thermal impacts to area streams, as well as the lack of information regarding secondary and cumulative effects.

Dated: August 21, 2007.

Chloropicrin, Dazomet, 1,3-Dichloropropene, Metam potassium, Metam sodium, and Methyl bromide; Extension of Comment Period

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; extension of comment period.

SUMMARY: EPA issued five notices in the **Federal Register** of May 2, 2007, announcing the availability and seeking comments on EPA's revised human health risk assessments and risk mitigation proposal for the fumigants chloropicrin, dazomet, 1,3-dichloropropene, metam potassium, metam sodium, and methyl bromide. On June 20, 2007, EPA issued a notice in the **Federal Register** extending the comment period for 60 days, until September 3, 2007. This document is extending the comment period for another 60 days, from September 3, 2007 to November 3, 2007, for the five actions.

DATES: Comments, identified by docket identification (ID) number (see the May 2, 2007 notices) must be received on or before November 3, 2007.

ADDRESSES: Follow the detailed instructions as provided under **ADDRESSES** in the **Federal Register** documents of May 2, 2007.

FOR FURTHER INFORMATION CONTACT: The applicable contact persons listed in the **Federal Register** documents of May 2, 2007.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

The Agency included in the notice a list of those who may be potentially affected by this action. If you have questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT** in the **Federal Register** documents of May 2, 2007.

B. How Can I Access Electronic Copies of this Document?

In addition to accessing an electronic copy of this **Federal Register** document

Project Description: (please use a separate page if necessary)

The proposed Schuyler Heim Bridge Replacement and SR-47 Expressway project would replace the seismically-deficient vertical lift bridge with a fixed-span bridge across the Cerritos Channel, and either construct an elevated four lane expressway from Ternal Island to Alameda Street, or construct an elevated four lane extension of SR-103 to Alameda Street. Six alternatives are evaluated in the joint EIR/EIS.

To: Parties requesting an extension of the comment period for the Schuyler Heim Bridge Replacement and SR-47 Expressway Project

Dear Sir/Madam:

The legally mandated 60-day period for public comment on this Draft EIR/EIS ends on October 16. However, you and representatives from other local agencies and interest groups have requested additional time to provide written comments on the project. Per your request, Caltrans is providing an informal extension of the deadline and will accept your written comments until early November 2007. Please rest assured that if we receive your comments within a reasonable timeframe, they will be included and addressed in the final environmental document.

Please forward all comments to Karl Price, Senior Environmental Planner, at the address above, or they can be faxed to him at 213-897-0685. If questions remain, he can also be reached by phone at 213-897-1839. Your timely comments are important to the decision making process.

Sincerely,

A handwritten signature in cursive script that reads "Ron Kosinski".

Ron Kosinski
Deputy District Director

**Aviso de Disponibilidad
Aviso de Audiencia Pública**

Reemplazo de Puente Schuyler Heim
y Proyecto de Autopista SR-47

Project Location Map

¿Qué está siendo planeado?
El Departamento de Transporte de California (Caltrans), Distrito 7, propone el reemplazo del Puente Schuyler Heim el cual tiene una deficiencia sísmica con una abertura fija y construir una nueva autopista elevada dentro y anexa a los Puertos de Long Beach y Los Angeles. Se han abarcado seis alternativas en el Borrador de la Declaración de Impacto Ambiental/Informe de Impacto Ambiental (Borrador EIS/EIR): Reemplazo de Puente y Autopista SR-47; Reemplazo de Puente y Extensión SR-103; Evitar la Demolición del Puente; Sólo Reemplazo del Puente; Administración de Sistemas de Transporte; y Zero Acción.

¿Cuál es el objetivo de este aviso?
Caltrans ha estudiado los efectos potenciales que este proyecto pueda tener en el ambiente. El estudio que explica estos resultados se llama Borrador de la Declaración de Impacto Ambiental/Informe de Impacto Ambiental (Borrador EIS/EIR), el cual recientemente fue aprobado para distribución pública.

¿Qué está disponible?
La audiencia pública se llevará a cabo el: martes 25 de septiembre, 2007, de 6 a 8 PM.
Banning's Landing Community Center
100 East Water Street, Wilmington, CA 90744

Las copias del Borrador EIR/EIS están disponibles para revisión en nuestra oficina del Distrito 7 y en las siguientes bibliotecas públicas alrededor del área del proyecto: Biblioteca Regional de Carson; Biblioteca de Victoria Park, Carson; Biblioteca de East Rancho Dominguez; Biblioteca de Harbor City - Harbor Gateway Branch; Biblioteca Regional de San Pedro; Biblioteca de Wilmington; Biblioteca Principal de Long Beach; Biblioteca Vecinal Mark Twain, Long Beach y en Biblioteca de la ciudad de Long Beach, Harte. El Borrador EIR/EIS y otra información del proyecto también pueden ser accedidas a través del sitio Web <http://www.dot.ca.gov/dist07/resources/envdocs> y a través del sitio Web de la Autoridad de Transporte Alameda Corridor www.acta.org.

¿Cuál es su participación?
¿Han sido evaluados los impactos potenciales? ¿Tiene usted información que debe ser incluida? Si usted desea hacer algún comentario al Borrador EIR/EIS, puede asistir a la audiencia pública y/o enviar sus comentarios por escrito hasta el **16 de octubre, 2007 a:**

Mr. Ronald Kosinski, Deputy District Director
Division of Environmental Planning

...the government decided to seek a grand jury indictment.

The defense also complained that Padilla was never given a fair shake by the government from the moment in spring 2002 that then-Atty. Gen. John Ashcroft went on national television and identified him as a major terrorism suspect intent on causing great harm with a dirty bomb.

"Throughout our history there have been times of crisis, times when fears run high, when political convenience causes parts of our government to over-reach," defense lawyer Anthony J. Natale told the jurors. He was referring to how Padilla was caught up in much of the anger and hysteria that followed the Sept. 11 terrorist strikes on New York and the Pentagon.

"Now is one of those times of crisis, and this is one of those cases," Natale said.

Padilla was arrested at Chicago's O'Hare International Airport. Ashcroft and other top administration officials said that upon returning to the United States, Padilla had planned to scope out sites for detonating a radioactive device.

The Padilla case immediately became the government's signature front in the war on terrorism at home.

But those charges were dropped after lawyers fought for years over his legal rights, and the courts ultimately ruled that Padilla must be either granted a trial or set free.

In November 2006, Padilla was added to an indictment originally drawn up in South Florida in 2004. It was on those charges that he was convicted Thursday.

Notice of Availability Notice of Public Hearing

Schuyler Heim Bridge Replacement
and SR-47 Expressway Project

LA. TIMES
FULL-RUN
8/17) 2007

1182962

What Is Being Planned?

The California Department of Transportation (Caltrans), District 7, is proposing to replace the seismically deficient Schuyler Heim Bridge with a fixed-span bridge and construct a new elevated expressway in and adjacent to the Ports of Long Beach and Los Angeles. Six alternatives have been addressed in the Draft Environmental Impact Statement/Environmental Impact Report (Draft EIS/EIR): Bridge Replacement and SR-47 Expressway; Bridge Replacement and SR-103 Extension; Bridge Demolition Avoidance; Bridge Replacement Only; Transportation Systems Management; and No Action.

Why This Notice?

Caltrans has studied the potential effects this project may have on the environment. The study that explains these findings is called a Draft Environmental Impact Report/Statement (Draft EIS/EIR), which has recently been approved for public circulation.

What is available?

A public hearing will be held on:
Tuesday, September 25, 2007, 6 - 8 PM.
Banning's Landing Community Center
100 East Water Street, Wilmington, CA 90744

Copies of the Draft EIS/EIR are available for review at our District 7 office and the following public libraries around the project area: Carson Regional Library; Victoria Park Library, Carson; Compton Library; East Rancho Dominguez Library; Harbor City - Harbor Gateway Branch Library; San Pedro Regional Library; Wilmington Library; Long Beach Main Library; Mark Twain Neighborhood Library, Long Beach, and the Long Beach City Library-Harte Library. The Draft EIS/EIR and other project information can also be accessed through our website at <http://www.dot.ca.gov/dist07/resources/envdocs> and through the Alameda Corridor Transportation Authority website at www.acta.org.

What is Your Involvement?

Have the potential impacts been addressed? Do you have information that should be included? If you wish to make a comment on the Draft EIS/EIR, you may attend the public hearing and/or submit your written comments until **October 16, 2007** to:

Mr. Ronald Kosinski, Deputy District Director
Division of Environmental Planning
CALTRANS, District 7
100 South Main Street
Los Angeles, CA 90012

If you have any questions regarding this project, please contact Karl Price at (213) 897-1839

Thank you for your interest!

and for all, a one-line article reading: 'Hugo Chavez will be president however long he wants.'

The president's political allies firmly control the National Assembly and are expected to approve the reform plan within months. It would then have to be approved by voters in a national referendum.

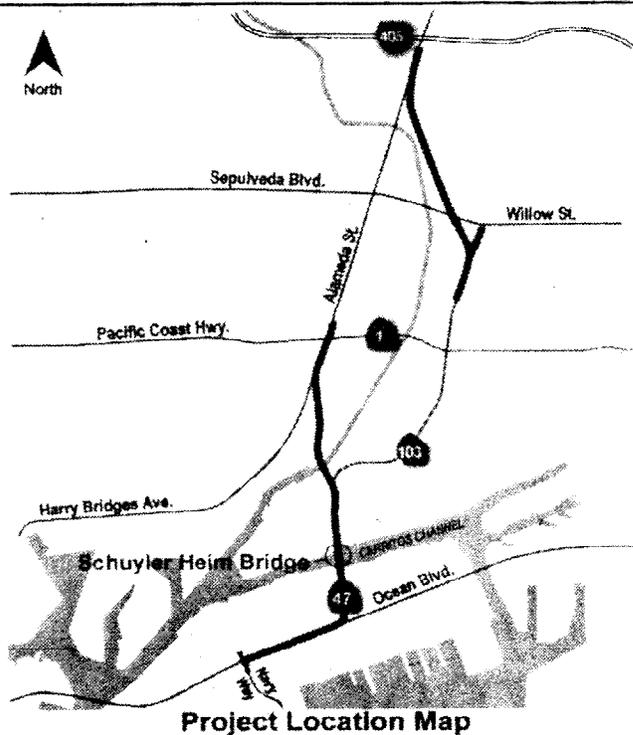

Government foes said they would mount a nationwide campaign lobbying Venezuelans to oppose the reform — a daunting task in a country that re-elected Chavez to the presidency by a wide margin last December.

Chavez was first elected in 1998 and took office the following year. Current presidential term limits prevent him from seeking re-election to a third term in 2012.

Earvin "Magic" Johnson fundraiser to support Sen. Barack Obama. Johnson said that talk show host Oprah Winfrey will hold a fundraiser on his behalf at her home in Santa Barbara. Johnson's fundraisers highlight the importance of democratic participation and support in the upcoming primary. Johnson is a well-known Obama

fan. She called him "my favorite guy" and "my choice" on CNN's "Larry King Live" last year before he announced he would run for president.

In a statement, Johnson said Clinton "has the experience and knowledge to help lead our country."

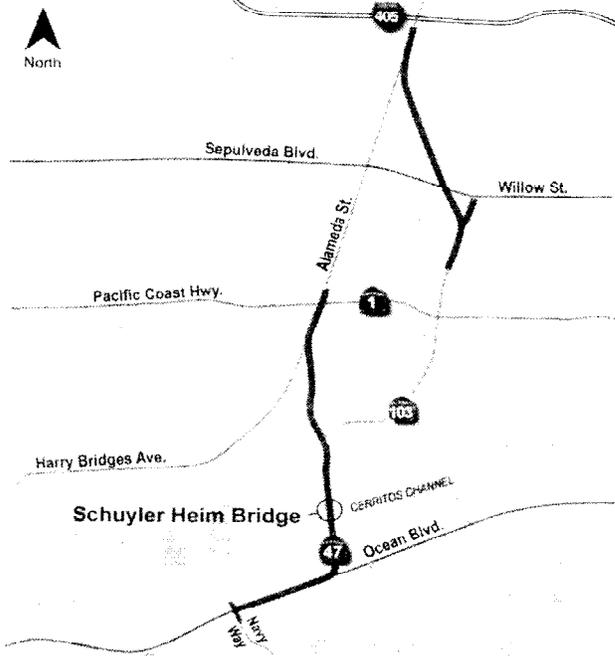

Co-hosts at Johnson's fundraisers include music industry heavyweights Quincy Jones and Berry Gordy, who announced their support for Clinton's campaign in April.

Notice of Public Hearing Schuyler Heim Bridge Replacement and SR-47 Expressway Project

What's Being Planned?

The California Department of Transportation (Caltrans), District 7, proposes to replace the seismically deficient Schuyler Heim Bridge with a fixed-span bridge and construct a new elevated expressway in and adjacent to the Ports of Long Beach and Los Angeles. Six alternatives have been addressed in the Draft Environmental Impact Statement/Environmental Impact Report (Draft EIS/EIR): Bridge Replacement and SR-47 Expressway; Bridge Replacement and SR-103 Extension; Bridge Demolition Avoidance; Bridge Replacement Only; Transportation Systems Management; and No Action. Some build alternatives will require additional right-of-way.

Why This Notice?

A public hearing will be held to allow you an opportunity to discuss proposed design features with the Project staff prior to the selection of the final design.

What's Available?

Copies of the Draft EIR/EIS are available for review at our District 7 office (100 S. Main Street, Los Angeles) and the following public libraries around the project area: Carson Regional Library; Victoria Park Library, Carson; East Rancho Dominguez Library; Harbor City - Harbor Gateway Branch Library; San Pedro Regional Library; Wilmington Library; Long Beach Main Library; Mark Twain Neighborhood Library, Long Beach; Los Angeles Central Library. The Draft EIR/EIS and other project information can also be accessed through our website at <http://www.dot.ca.gov/dist07/resources/cnvdocs> and through the Alameda Corridor Transportation Authority website at www.acta.org.

When and Where?

The public hearing will be held on:
Tuesday, September 25, 2007, 6 - 8 PM.
Banning's Landing Community Center
100 East Water Street, Wilmington, CA 90744

You can send your written comments until **October 16, 2007** to:

Mr. Ronald Kosinski, Deputy District Director
Division of Environmental Planning
CALTRANS, District 7
100 South Main Street
Los Angeles, CA 90012

If you have any questions regarding this project,
please contact Karl Price at (213) 897-1839.

Thank you for your interest!

generous and never seemed to want anything, the operative said. What's more, Hsu would return calls.

The checks he would bundle generally were for about \$1,000. People responsible for vetting donations spend little or no time verifying that checks that small came from legitimate sources.

Unlike some donors, Hsu does not seem enthralled by policy. He has views like many other Democrats, but sees politics more like a game and will "root for his team," the operative said. "He seemed to get a thrill out of the victories."

Hsu, who is not registered to vote, emerged on the political scene in 2003 with a contribution to Massachusetts Sen. John F. Kerry's presidential campaign.

Michelle Kraus, a political strategist, fundraiser and technology executive in Silicon Valley, came to know Hsu when she was helping Kerry — and says she was immediately skeptical. She had worked extensively with the Asian American community during the campaign and said Hsu did not seem to fit in with those she knew.

She said he tried to ingratiate himself, offering to get her reservations at exclusive restaurants. "I was not impressed with Norman's machinations," Kraus said. "We are dealing with someone who wanted to be part of the cool kids."

But though Kraus was wary of Hsu, she does not fault the Clinton campaign: "They just got suckered by a guy who suckered a lot of people."

INFORMATION

Schuyler Heim Bridge Replacement & SR-47 Expressway Project

Draft Environmental Impact Statement/Report (EIS/EIR)

Public Hearing: September 25, 2007, 6:00 p.m.
Banning's Landing, 100 E. Water Street, Wilmington

Public Comment Period: Ends October 16, 2007

Draft EIS/EIR: Available at local public libraries and at <http://www.acta.org> or www.dot.ca.gov/dist07/resources/envdoc

Project Description

The Schuyler Heim Bridge Replacement and SR-47 Expressway Project is being advanced through a joint partnership between Caltrans and the Alameda Corridor Transportation Authority (ACTA). The project proposes to replace the seismically deficient Schuyler Heim Bridge over Cerritos Channel and add a four-lane elevated roadway connection to Alameda Street that will bypass three signalized intersections and five at-grade railroad crossings. The Heim Bridge is an essential service link between Terminal Island and the mainland in Wilmington.

This project will provide an alternative route from Terminal Island, a major generator of port-related truck traffic, and provide direct access to local distribution centers and warehousing facilities in the South Bay area, as well as I-405 and SR-91, thereby relieving congestion on the Harbor and Long Beach freeways.

The Schuyler Heim Bridge Replacement and SR-47 project will enhance the efficient, secure movement of goods at the nation's largest port complex, as well as reduce congestion and improve mobility.

Project Benefits

- Replaces the seismically-deficient Schuyler Heim moveable bridge with a new safer fixed bridge
- Creates an expressway between Ocean Blvd. on Terminal Island and Alameda St. at Pacific Coast Highway
- Enhances mobility on local freeways by diverting 5-8% of the port-related trucks
- Diverts trucks from certain local arterials and commercial and residential areas
- Facilitates future improvements to the Long Beach I-710 Freeway
- Provides alternative route to the existing near-dock rail yard
- Eliminates traffic conflicts at 5 at-grade rail crossings and 3 traffic signals

Alternative 1 - Flyer Distribution

Fact Sheet

Schuyler Heim Bridge Replacement / SR-47 Expressway Project

Project Location:

The project area is located within the cities and ports of Los Angeles and Long Beach, between Ocean Boulevard on Terminal Island and I-405.

Project Description:

The proposed project consists of replacing the seismically deficient vertical lift Schuyler Heim Bridge with a fixed-span bridge, construction of a 4-lane elevated expressway connecting to Alameda Street, and construction of an elevated onramp (flyover) from eastbound Ocean Boulevard to northbound SR-47. Six alternatives are evaluated in the Draft Environmental Impact Statement/Environmental Impact Report (EIS/EIR): Bridge Replacement and SR-47 Expressway; SR-103 Extension to Alameda Street; Bridge Demolition Avoidance; Bridge Replacement Only; and Transportation System Management (TSM); and No-Build.

Project Need and Benefits:

The Schuyler Heim Bridge was constructed in 1948 and provides an essential service link to Terminal Island. The bridge and needs to remain in service to ensure ground and marine vessel transportation during a major earthquake, even though it does not meet current seismic standards. In addition, existing and increasing traffic and congestion occur along local arterials, on I-710 and I-110, and at the intersection of Ocean Boulevard and SR-47.

A new fixed-span bridge would provide additional vehicle capacity and could remain in service in the event of a major earthquake. An elevated north-south expressway extension would reduce traffic congestion by grade-separating at-grade railroad crossings and signalized intersections. With the flyover, traffic on eastbound Ocean Boulevard could divert directly onto northbound SR-47 and across the new bridge, thereby avoiding the existing signalized intersection.

Environmental Process:

The National Environmental Policy Act (NEPA) of 1969 requires federal agencies to analyze potential environmental impacts of major federal actions. The California Environmental Quality Act (CEQA) of 1970 requires state agencies to analyze potential environmental impacts of major state actions. Since there are both federal and state aspects of the proposed project, the six alternatives are evaluated in the Draft EIS/EIR in accordance with requirements of both NEPA and CEQA.

Environmental Impacts:

The project alternatives have the potential for impacts related to: cultural resources (Schuyler Heim Bridge), biological resources, hazardous waste, air and water quality, hydrology, noise, aesthetics, surface and marine traffic, utilities/public services, community resources, land use, growth, energy, and geology/paleontology. The Draft EIS/EIR evaluates potential impacts and proposes mitigation measures where necessary. As evaluated, impacts to noise and biological resources would be mitigated. Impacts to air quality and cultural resources could not be completely mitigated. For other resources, either no impacts are anticipated, or avoidance and minimization measures are proposed.

Project Milestones:

Public Outreach	Ongoing
Complete Draft EIS/EIR	August 2007

Notice of Availability
Schuyler Heim Bridge Replacement
and SR-47 Expressway Project

LA Times
11/20/08

What is Being Planned?

The California Department of Transportation (Caltrans), District 7, is proposing to replace the seismically deficient Schuyler Heim Bridge with a steel-span bridge and construct a new elevated expressway in and adjacent to the Ports of Long Beach and Los Angeles. Six alternatives have been submitted in the Draft Environmental Impact Statement/Environmental Impact Report (Draft EIS/EIR): Bridge Replacement and SR-47 Expressway; Bridge Replacement and SR-103 Extension; Bridge Demolition Avoidance; Bridge Replacement Only; Transportation Systems Management; and No Action.

Why This Notice?

Caltrans has studied the potential effects this project may have on the environment. **New information relevant to the proposed project is now available, information that was not available when the Draft EIS/EIR was circulated for public review and comment in August 2007.** The document that explains these findings is called a Supplemental Draft Environmental Impact Statement/Recirculated Draft Environmental Impact Report (SDEIS/RDEIR), which has recently been approved for public circulation.

What is available?

Copies of the SDEIS/RDEIR are available for review at our District 7 office and the following public libraries around the project area: Carson Regional Library; Dr. Martin Luther King, Jr. Library, Carson; Compton Library; East Rancho Dominguez Library; Harbor City – Harbor Gateway Branch Library; San Pedro Regional Library; Wilmington Library; Long Beach Main Library; Mark Twain Neighborhood Library, Long Beach; Long Beach City Library – Harte Library, and the Los Angeles Library Department. The SDEIS/RDEIR and other project information can also be accessed through our website at <http://www.dot.ca.gov/dist07/resources/envdocs> or through the Alameda Corridor Transportation Authority website at <http://www.acta.org>

What is Your Involvement?

Have the potential impacts been addressed? Do you have information that should be included? If you wish to make a comment on the SDEIS/RDEIR, you may submit your written comments until **January 5, 2009** to:

Mr. Ronald Kosinski, Deputy District Director
Division of Environmental Planning
CALTRANS, District 7
100 South Main Street
Los Angeles, CA 90012

If you have any questions regarding this project, please contact Karl Price at (213) 897-1839

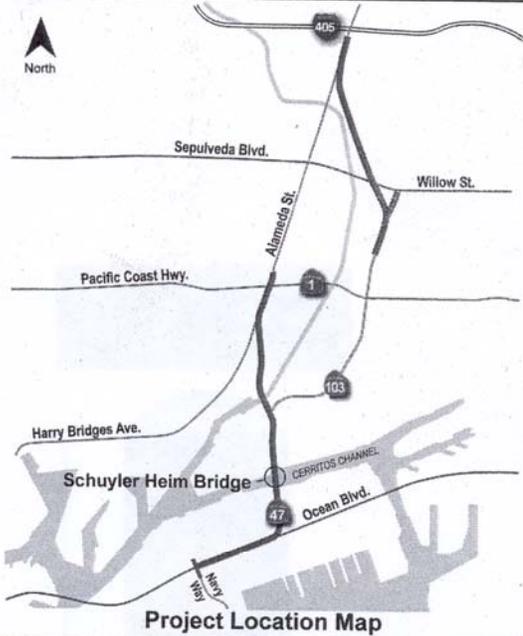

Thank you for your interest!

Aviso de Disponibilidad
Reemplazo de Puente Schuyler Heim y
Proyecto Expressway SR-47

Project Location Map

¿Qué está siendo planeado?

El Departamento de Transporte de California (Caltrans), Distrito 7, propone el reemplazo del Puente Schuyler Heim el cual tiene una deficiencia sísmica con una abertura fija y construir una nueva autopista elevada dentro y adyacente a los Puertos de Long Beach y de Los Ángeles. En el Borrador de la Declaración de Impacto Ambiental/Informe de Impacto Ambiental (Borrador EIS/EIR) se han tratado seis alternativas: Reemplazo de Puente y Autopista SR-47; Reemplazo de Puente y Extensión SR-103; Evitar la Demolición del Puente; Sólo Reemplazo del Puente; Administración de Sistemas de Transporte; y Zero Acción.

¿Cuál es el objetivo de este aviso?

Caltrans ha estudiado los efectos potenciales que este proyecto podría tener en el ambiente. **La nueva información relevante para el proyecto propuesto está disponible ahora, dicha información no estuvo disponible cuando el Borrador del EIS/EIR estuvo circulando para revisión y comentario del público en agosto de 2007.** El documento que explica estos resultados se llama Borrador de la Declaración de Impacto Ambiental/Informe de Impacto Ambiental (Borrador EIS/EIR), el cual recientemente fue aprobado para distribución pública

¿Qué está disponible?

Las copias del SDEIS/RDEIR están disponibles para revisión en nuestra oficina del Distrito 7 y en las siguientes bibliotecas públicas en los alrededores del área del proyecto: Biblioteca Regional Carson; Biblioteca Dr. Martin Luther King, Jr., Carson; Biblioteca Compton; Biblioteca East Rancho Dominguez; Biblioteca Harbor City – Harbor Gateway Branch; Biblioteca Regional San Pedro; Biblioteca Wilmington; Biblioteca Principal Long Beach; Biblioteca Mark Twain Neighborhood Library, Long Beach, Biblioteca Long Beach City Library, Biblioteca Harte, y el Departamento de Biblioteca de Los Ángeles. El SDEIS/RDEIR e información adicional del proyecto también puede ser accesada a través de internet en la dirección <http://www.dot.ca.gov/dist07/resources/envdocs> o a través de la página del Alameda Corridor Transportation Authority <http://www.acta.org>

¿Cuál es su participación?

¿Se han evaluado los impactos potenciales? ¿Tiene usted información que debe ser incluida? Si usted desea hacer un comentario sobre el SDEIS/RDEIR, puede enviar sus comentarios por escrito hasta el **5 de enero de 2009** a la siguiente dirección:

Mr. Ronald Kosinski, Deputy District Director
Division of Environmental Planning
CALTRANS, District 7
100 South Main Street
Los Angeles, CA 90012

Si usted tiene cualquier pregunta sobre este proyecto, por favor comuníquese con Karl Price al (213) 897-1839

¡Muchas gracias por su interés!

L.A. Watts Times
11/20/08

1 information that were submitted for review on
2 November 20th, 2008, which included the health risk
3 assessment that was performed at the request of the
4 ACTA Board, the ACTA Board in response to comments made
5 of the September public meeting.

6 Please fill out the speaker cards in advance
7 and give them to Maria or Liz. They're over there.
8 Please raise your hands.

9 If you do not wish to speak but want to
10 submit comments tonight, please fill in your comments
11 on the cards. Both the speakers' oral comments and
12 those comments on the cards will be made part of the
13 record with responses included in the final EIR/EIS.

14 You will also have the opportunity to file
15 written comments with Caltrans by Friday of this week,
16 January 30th, 2009, by e-mail, fax or letter. Those
17 who require more time may request Caltrans in writing
18 before Friday to grant them additional time.

19 These requests will be considered by Caltrans
20 on a case-by-case basis. We encourage all of you to
21 get your comments in by the deadline so they can be
22 addressed. These instructions will be repeated at the
23 end of this meeting.

24 We will begin with a seven-minute long video
25 describing the project followed by three speakers.

1 Please hold all your comments until after the speakers
2 finish. Those who have submitted speaker cards will be
3 called in the order they were received. Three names
4 will be called at a time to help speed the process.

5 And with that, I would like to introduce the
6 SR-47 video to provide you with an overview of the
7 entire project.

8 (A seven-minute video was played.)

9 MR. HERNANDEZ: I would now like to introduce
10 Art Goodwin, the director of planning for the Alameda
11 Corridor who will provide an overview of the project.

12 Mr. Goodwin.

13 MR. GOODWIN: Thank you very much.

14 I'm just going to provide a very brief
15 overview of the project and some of the milestones and
16 dates that we've been working on.

17 The first thing I'll provide is the project
18 alternatives. Something that you may remember we had
19 in the drafting of the EIR/EIS here in this room
20 September 27, 2007. So that's a year-and-a-half ago
21 now.

22 There were six alternatives. The two
23 alternatives that received the most attention and
24 provide the most -- address most of the goals of the
25 project are really two.

January 20, 2009

The Honorable Warren T. Furutani
Assembly Member, 55th District
4201 Long Beach Boulevard, Suite 327
Long Beach, CA 90807

Dear Assembly Member Furutani:

We appreciate your interest in this critical bridge replacement and expressway improvement project. The California Department of Transportation (Department) and Alameda Corridor Transportation Authority (ACTA) are attempting to develop a project that replaces the Schuyler Heim Bridge, which is seismically deficient, structurally deficient and has substandard safety features. The proposed project alternatives, which have not changed, originally commenced public review on August 17, 2007. So the public's knowledge and understanding of the project alternatives and their potential impacts are well known.

The new information currently being recirculated has a limited focus. The Department and ACTA agreed to circulate the ACTA Health Risk Assessment (HRA) and the UC Davis analysis. The Department believes that this limited new information has clear limitations and uncertainties. The ACTA HRA follows the South Coast Air Quality Management District methodology, which is well known to those who are interested in potential health related implications of projects proposed in the vicinity of the Port of Los Angeles and Port of Long Beach.

Public circulation of this HRA commenced on November 20, 2008. Since then, we have received several comments and believe the legally required 45-day California Environmental Quality Act review timeframe is adequate. However, we have offered community interest groups additional time to provide responses as an informal extension. In response to your request, the Department will extend our informal comment period and will accept comments until the ACTA community meeting on January 27, 2009, this timeframe allows for consideration of any insights that may come from that meeting. Those individuals who contact us requesting more time will be informed of this extension. We look forward to reviewing any meaningful comments and moving forward with a decision. I trust that this extension and the factors we are considering provide a balanced understanding of the factors surrounding this critical transportation project.

The Honorable Warren T. Furutani
January 20, 2009

Project Description: (please use a separate page if necessary)

The proposed Schuyler Heim Bridge Replacement and SR-47 Expressway project would replace the seismically deficient vertical lift bridge with a fixed-span bridge across Cerritos Channel, and either construct an elevated four-lane expressway from Terminal island to Alameda Street, or construct an elevated four-lane extension of SR-103 to Alameda Street. Six alternatives are evaluated in the Draft Recirculated EIR/Draft Supplemental EIR.

Note: The state Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

Reviewing Agencies Checklist

Lead Agencies may recommend State Clearinghouse distribution by marking agencies below with an "X".
If you have already sent your document to the agency please denote that with an "S".

Responsible Agencies, Reviewing Agencies, Trustee Agencies and Individuals Interested in the Schuyler Heim Bridge Replacement and SR-47 Expressway Project

File: 07-LA-47 PM 2.7/5.8
Schuyler Heim Bridge Replacement and SR-47 Expressway Project
EA 238500

Notice of Availability

Supplemental Draft Environmental Impact Statement/Recirculated

Draft Environmental Report

The California Department of Transportation (Caltrans) has completed the Supplemental Draft Environmental Impact Statement/Recirculated Draft Environmental Impact Report (SDEIS/RDEIR) for the Schuyler Heim Bridge Replacement and SR-47 Expressway Project in the Ports of Long Beach and Los Angeles, California. The proposed alternatives include replacement of the Schuyler Heim lift bridge with a fixed-span bridge and either construction of an elevated SR-47 expressway from Terminal Island to Pacific Coast Highway (the new bridge will be a portion the new expressway) or construction of an elevated SR-103 extension. Six alternatives for the project have been evaluated.

This SDEIS/RDEIR for the proposed Schuyler Heim Bridge Replacement and SR-47 Expressway project provides new information relevant to the proposed project, information that was not available when the Draft EIS/EIR was circulated for public review and comment in August 2007. The document is considered a partial SDEIS/RDEIR because it only includes information and analysis updated since the Draft EIS/EIR was circulated. The new information is based on a Health Risk Assessment prepared by the Alameda Corridor Transportation Authority (ACTA), as a Responsible Agency, and an analysis of the ACTA HRA performed by Caltrans and the University of California Davis.

IS THIS BEING SENT AS A HARD COPY? WHAT ABOUT CDs?

In an effort to save paper, the enclosed SDEIS/RDEIR is being sent on CD. A hard copy of the SDEIS/RDEIR may be viewed at the following locations:

- Caltrans, District 7: 100 South Main Street, Los Angeles, CA 90012
- Los Angeles Library Department: 630 W. 5th Street, Los Angeles, CA 90071
- Wilmington Library: 1300 North Avalon Boulevard, Wilmington, CA 90744
- Carson Regional Library: 151 East Carson Street, Carson, CA 90745-2797
- Victoria Park Library: 17906 South Avalon Boulevard, Carson, CA 90746-1598
- Compton Library: 240 W. Compton Blvd., Compton, CA 90220
- San Pedro Regional Library: 931 South Gaffey Street, San Pedro, CA 90731
- Harbor City-Harbor Gateway Branch Library: 24000 South Western, Harbor City, CA 90710

- Long Beach City Library-Harte Library: 1595 West Willow Street, Long Beach, CA 90810
- Long Beach Main Library: 101 Pacific Avenue, Long Beach, CA 90802
- Mark Twain Neighborhood Library: 1325 East Anaheim Street, Long Beach, CA 90813
- Each Rancho Dominguez Library: 4205 East Compton Boulevard, East Rancho Dominguez, CA 90221-3664

The SDEIS/RDEIR may also be accessed from our website:

<http://www.dot.ca.gov/dist07/resources/envdocs/> and through the Alameda Corridor Transportation Authority website at: www.acta.org

We will be pleased to answer any questions you may have with regard to this project.

Written comments on the SDEIS/RDEIR must be submitted by January 5, 2009.

Please send your comments to:

Ronald Kosinski, Deputy District Director
Division of Environmental Planning
Department of Transportation, District 7
100 South Main Street MS-16A
Los Angeles, CA 90012

If you have any questions, please contact Karl Price (213) 897-1839. Thank you for your interest in this important transportation project.

Sincerely,

Ronald Kosinski
Deputy District Director, Caltrans District 7

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. PR09-5-000]

Lee 8 Storage Partnership; Notice of Petition for Rate Approval

November 21, 2008.

Take notice that on November 14, 2008, Lee 8 Storage Partnership (Lee 8) filed pursuant to section 284.123(b)(2) of the Commission's regulations, filed a petition requesting that the Commission approve its rates pursuant to section 31(a)(2) of the Natural Gas Policy Act of 1978. Lee 8 proposes system-wide maximum rates of \$3.2988 per Dt of deliverability and \$0.0330 per Dt of capacity. In addition, Lee 8 states that it will charge 0.57% of the injected volumes and 0.57% of the withdrawal volumes as an allowance for compressor fuel and lost-and-unaccounted-for gas on Lee 8's system.

Any person desiring to participate in this rate proceeding must file a motion to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the date as indicated below. Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and

interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail FERCOnlineSupport@ferc.gov, or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Comment Date: 5 p.m. Eastern Time December 1, 2008.

Kimberly D. Bose,
Secretary.

BILLING CODE 6717-01-P

ENVIRONMENTAL PROTECTION AGENCY

[ER-FRL-8588-1]

Environmental Impact Statements and Regulations; Availability of EPA Comments

Availability of EPA comments prepared pursuant to the Environmental Review Process (ERP), under section 309 of the Clean Air Act and Section 102(2)(c) of the National Environmental Policy Act as amended. Requests for copies of EPA comments can be directed to the Office of Federal Activities at 202-564-7146.

An explanation of the ratings assigned to draft environmental impact statements (EISs) was published in FR dated April 6, 2008 (73 FR 19833).

Draft EISs

EIS No. 20080340, ERP No. D-FHW-740184-UT, SR-262; Montezuma Creek to Aneth Project, Improvements to the Intersection of SR-162, SR-262, and County Road (CR) 450 in Montezuma Creek, Funding, Navajo Nation, San Juan County, UT.

Summary: EPA expressed environmental concerns about increased sedimentation and erosion impacts, additional impacts to drainage channels and habitat connectivity, and cumulative impacts to water quality and wildlife. Rating EC2.

EIS No. 20080370, ERP No. D-AFS-K65347-CA, Gemmill Thin Project, Proposal to Reduce the Intensity and Size of Future Wildfires, and to Maintain/Improve Ecosystem Function and Wildlife Habitat, Chanchellula Late-Successional Reserve, Shasta-Trinity National Forest, Trinity County, CA.

Summary: EPA expressed environmental concerns about impacts to air quality, and requested additional mitigation measures. EPA also expressed environmental concerns about impacts to communities. Rating EC2.

EIS No. 20080397, ERP No. D-AFS-765525-00, Hermosa Landscape Grazing Analysis Project, Proposes to Continue to Authorize Livestock Grazing Cascade Reservoir, Dutch Creek, Elbert Creek, Hope Creek South Fork, and Upper Hermosa Allotments, Columbine Ranger District, San Juan National Forest, LaPlata and San Juan Counties, CO.

Summary: EPA expressed environmental concerns about impacts to water quality, and requested a commitment to monitoring and protection of at-risk riparian areas. Rating EC2.

EIS No. 20080302, ERP No. DB-UAF-E11056-FL, Eglin Air Force Base (AFB) and Hurlburt Field, Proposes to Implement the Military Housing Privatization Initiative (MHPI), FL.

Summary: EPA expressed environmental concerns about impacts to air quality from construction activities. Rating EC2.

EIS No. 20080352, ERP No. DS-COE-G39047-00, White River Minimum Flood Study, To Provide an Improved Minimum Flow for the Benefit of the Tail Water Fishery, White River Basin Lakes: Beaver, Table Rock, and Bull Shoal Lakes on the White River; Norfolk Lake on the North Fork White River; and Greens Ferry Lake on the Little Red River, AR and MO.

Summary: No formal comment letter was sent to the preparing agency. Rating LO.

Final EISs

EIS No. 20080321, ERP No. F-FHW-K40267-CA, Phase I-CA 11 Corridor Location and Route Adoption and Location Identification of the Otay Mesa East Port of Entry (POE) on Otay Mesa, Presidential Permit for the POE and Acquisition of Right-Of-Way Permit, San Diego County, CA.

Summary: EPA continues to have environmental concerns about impacts from induced growth and the lack of information on mobile source air toxics.

EIS No. 20080338, ERP No. F-FHW-J40180-UT, UT-108 Transportation Improvement Project, To Improve Local and Regional Mobility from UT-108 between UT-127 (Antelope Drive) to UT-126 (1900 West) Located in Syracuse, West Point and Clinton in Dave County, and Roy and West Haven in Weber County, UT.

Summary: EPA continues to have environmental concerns about mobile source air toxics. However, EPA is pleased that FHWA has addressed previous concerns raised about other construction emission BMPs and mitigation measures for impacts to sensitive receptors.

EIS No. 20080367, ERP No. F-FHW-J40178-UT, Mountain View Corridor (MVC) Project, Proposed Transportation Improvement 2030 Travel Demand in Western Salt Lake County south of I-80 and west of Bangerter Highway and in northwestern Utah County of I-15, south of the Salt Lake County Line, and north of Utah Lake, Salt Lake and Utah County, UT.

Summary: EPA continues to have environmental concerns about the analysis of mobile source air toxics.

EIS No. 20080412, ERP No. F-FRA-C50016-UT, Portal Bridge Capacity Enhancement Project, To Replace the nearly 100-Year-Old Portal Bridge and Eliminate Capacity Constraints on the Northeast Corridor between Swift Interlocking and Secaucus Transfer Station, Funding, U.S. Army Corp Section 10 and 404 Permits, Hackensack River, Hudson County, NJ.

Summary: EPA has environmental concerns about the general air conformity and mitigation for wetlands impacts.

EIS No. 20080417, ERP No. F-UAF-E15001-FL, Eglin Air Force Base Program, Base Realignment and Closure (BRAC) 2005 Decisions and Related Action, Implementation, FL.

Summary: EPA has environmental concerns about impacts to air quality from the BRAC relocation activities and noise exposure from the introduction of the F-35 aircraft.

EIS No. 20080425, ERP No. F-NOA-C91006-00, Amendment 4 to the Spiny Lobster Fishery Management Plan of Puerto Rico and the U.S. Virgin Islands and Amendment 8 to the Spiny Lobster Fishery Management Plan of the Gulf of Mexico and South Atlantic, To Address the Harvest and Exportation of Undersized Lobster Tails to the United States.

Summary: EPA does not object to the proposed project.

EIS No. 20080427, ERP No. F-AFS-F65071-WI, Medford Aspen Project, Preferred Alternative is Alternative 3, To Implement a Number of Vegetation and Transportation Management Activities, Medford-Park Falls Ranger District, Chequamegon-Nicolet National Forest, Taylor County, WI.

Summary: EPA does not object to the proposed action.

Dated: November 24, 2008.

Robert W. Hargrove,
Director, NEPA Compliance Division, Office of Federal Activities.

Comment Card 1

Response to Comment CC1-1

Your concerns regarding project-related impacts to the City of Carson are recorded in the Public Hearing transcript. Please see responses to your comments (TR-1, TR-2, TR-3, TR-4, TR-5).

Response to Comment CC1-2

Your concerns regarding project-related impacts to the City of Carson are acknowledged. Please see responses AJ8-2 and AJ8-15.

Also, please note that residences of concern in Carson, namely those located east of Alameda Street between Dominguez Street and I-405, and the church and homes between Dominguez and Carson Streets, are considered to be outside the project study area. The study area encompasses locations where the proposed SR-47 project would cause actual physical changes to the roadway system.

Comment Card 7

Response to Comment CC7-1

Your name has been added to the mailing list, as requested.

Response to Comment CC7-2

By virtue of being included in this Final EIS/EIR, your comments and responses are filed in the public record.

Response to Comment CC7-3

Your comments are addressed in responses TR1-17 and TR1-18.

Response to Comment CC7-4

Your opposition to the proposed project is acknowledged.

Response to Comment CC7-5

The commenter is referred to responses OB4-5, OB4-11, and OB5-8 discussions regarding cargo transport by alternative technologies.

Comment Card 8

Response to Comment CC8-1

Your comments are addressed in responses TR1-19, TR1-20, TR1-21, TR1-22 and TR1-23.

Response to Comment CC8-2

The commenter is referred to responses TR1-19 and TR1-20, which address the relationship between the project and port growth.

Response to Comment CC8-3

The commenter is referred to Response AJ11-32 for discussion of global climate change as it may relate to the proposed project.

Response to Comment CC8-4

The commenter is referred to responses TR1-21 and OB6-6, which address the expected decrease in vehicular emissions.

Comment Card 12

Response to Comment CC12-1

Your comments are addressed in responses TR1-30 and TR1-31.

Response to Comment CC12-2

The commenter's concerns regarding the accuracy of traffic projections are acknowledged.

The traffic models are correct. With the project, as the truck traffic is expected to increase along Alameda Street, auto traffic will tend to divert to I-110 and I-710. As a result, auto traffic will decrease along Alameda Street.

Also see response TR1-30.

Comment Card 15

Response to Comment CC15-1

Your comments are addressed in responses TR1-42, TR1-43, and TR1-44.

Response to Comment CC15-2

Your opposition to replacement of the vertical lift Schuyler Heim Bridge with a fixed-span bridge is acknowledged. The existing Schuyler Heim Bridge has a number of well-documented deficiencies that must be rectified. The bridge is functionally obsolete and does not meet current seismic standards and, as a consequence, would not be capable of remaining in service following a major earthquake and ensuring the continued flow of highway and marine traffic. The current bridge is incapable of maintaining emergency relief access to and from Terminal Island and the critical movement of people, freight, and goods following a major earthquake. The proposed fixed span bridge would remedy the shortcomings of the Schuyler Heim Bridge at less cost than retrofitting and maintaining the existing bridge.

Your comments and responses are filed in the public record.

Response to Comment CC18-3

Your comments are addressed in responses TR1-49 and TR1-50.

Response to Comment CC18-4

Your support for project Alternative 1 and your objection to project Alternative 2 are acknowledged.

Response to Comment CC18-5

Your concerns regarding noise and visual impacts to the residential area north of the I-405 are acknowledged. However, the project study area encompasses locations where the proposed SR-47 project would cause actual physical changes to the roadway system.

Residences of concern in Carson, namely those located east of Alameda Street between Dominguez Street and I-405, and the church and homes between Dominguez and Carson Streets, are considered to be outside the project study area in regard to noise analysis, visual assessment, and other concerns.

COMMENTS: <u>The Harbor Association represents the major industrial & engineering firms in the harbors. We support Alternative 1 because it is the most cost effective approach to reducing the congestion on the 110 & 710 freeways. It replaces the seismically deficient Alameda bridge. It gives direct access to and from Terminal Island for both cars and trucks. And it enhances response times for emergency vehicles because it bypasses 5 at grade rail crossings</u>

Your name has been added to the mailing list, as requested.

Response to Comment CC21-2

Your comments are addressed in responses TR1-53, TR1-54, TR1-55, and TR1-56.

Response to Comment CC21-3

Your concerns regarding the monetary aspects of the proposed project are acknowledged. Regarding funding for the proposed project: the State Route 47 and Schuyler Heim Bridge replacement project is one of the candidate short-term (0-3 years) actions listed in the final Goods Movement Action Plan published in January, 2007. With the passage of the Highway Safety, Traffic Reduction, Air Quality and Port Security Bond Act of 2006, \$3.1 billion will be available to help address the wide range of infrastructure, air quality, and homeland security aspects of California's goods movement system. Appendix C of the Plan indicates the amounts of committed public funding to candidate projects. The SR-47 (including Schuyler Heim Bridge replacement) has a commitment of \$246 million from the State Highway Operations and Protection Program of the state and \$10 million from the federal Safe, Accountable, Flexible, Efficient, Transportation Equity Act-A Legacy for Users program. It is currently expected that funding for the bridge portion of the project will be replaced with Grant Anticipation Revenue Vehicle (GARVEE) bonds and will be included in the 2008 SHOPP.

Implementation of the proposed project would bring a number of benefits including, but not limited to, the following: a safe and secure bridge connection to Terminal Island and the Ports of Long Beach and Los Angeles; uninterrupted traffic flow (for both highway vehicles and marine vessels); reduced congestion on approach streets and highways; reduced travel time; and reduced emissions of air contaminants.

Your comments and responses are filed in the public record.

Response to Comment CC25-2

Your support for project Alternatives 1 and 2 is acknowledged.

Response to Comment CC25-3

Please see responses TR1-21, EO1-5, AJ7-2, AJ7-21, and AJ11-2, which address vehicular emissions.

Response to Comment CC25-4

In the air quality analysis, sensitive receptors such as residences, schools, and medical facilities were evaluated which and address your concern that families be considered. Please see responses TR1-23, EO1-5, AJ7-2, and AJ11-2.

Response to Comment CC25-5

Your comments regarding trucks are noted. However, smog checks are a regulatory requirement outside the jurisdiction of the Lead Agency. In addition, truck owner/operators would be expected to maintain their vehicles to the manufacturer's specifications. The condition of the truck tires is beyond the control of the Lead Agency.

Response to Comment CC25-6

The schedule for repaving Alameda Street at the location specified in the comment is not within the scope of the proposed project and, therefore, is not known.

Changed per record - not speaking

6:00 P.M.

REPORTER'S TRANSCRIPT OF PROCEEDINGS

REPORTED BY: NICOLE R. HARNISH, CSR No. 13101

SEPTEMBER 25, 2007, WILMINGTON, CALIFORNIA

MS. LOWENTHAL: Hi. Good Evening. I am standing. I am Bonny Lowenthal. I am the vice chair of the City of Long Beach; and I am the current chair of the Alameda Corridor Transportation Authority, which is why you are all here. We are known as ACTA. And I want to welcome you to the public hearing this evening. I want to thank you for taking the time to be here and learn all about this project, hopefully ask a lot of questions, give ACTA a lot of feedback; and for those who don't have the time to get all the information that they're interested in, please, be assured that we are very happy to set up additional meetings. It's very important for everyone to know.

I see many of you that I know in the audience, but I do want to give a special welcome to my friend Mick Sramek who is the new harbor commissioner for the Port of Long Beach. Wave your hand, Nick. And I don't know if there are any other commissioners here. But, Nick, thank you for being here.

The SR-47 Expressway project is a joint partnership with Caltrans and ACTA to replace the seismically deficient Commodore Heim Bridge over the

TR1
Page 3

Carritos Channel. We all know how important bridge safety is, having just witnessed the catastrophe in Minneapolis.

The project will also add a four-lane elevated roadway that will allow both cars and truck to by pass three signalized intersections and five at-grade rail crossings in Wilmington, reducing congestion on the I-710 and Harbor Freeways. The Heim Bridge provides an essential service link to the ports of Los Angeles and Long Beach and is required to remain in service to ensure ground and marine vessel transportation during an earthquake.

There are several project alternatives which were analyzed within the environmental documents, and they will be summarized for you tonight.

I want very much to thank our partners at Caltrans and ACTA's consultants for all of their efforts today to bring forward the environmental impact documents about which we would like to hear from you. ACTA and Caltrans have a successful history of collaboration, most recently on the critical grade separation project that was developed several years go on PCH, which is also in Wilmington.

So, again, I want to thank all of you for

taking the time. We look forward to hearing your comments and feedback. Thank you very much.

I also would like to let you know I have a 7:00 o'clock obligation in Long Beach, so I won't be able to stay. But for sure, I will hear the comments and look forward to any individual meetings that may come up following this session. Thank you.

MR. KOSINSKI: Okay. Thank you, Bonnie. And what we are going to do now is go back to the format that we had when we talked. So if there are people here who want to look at the maps and talk to the staff on an informal basis, we are going to that for a few more minutes. And then we will start the formal presentation when it appears that nobody else has any issue with the map. So go back to what you were doing before, and we will be having our presentation in a few minutes.

Thank you.

(Recess.)

MR. KOSINSKI: If I could have your attention, we are going to start the public hearing right now. So if you would please take your seats. Can we have your attention, please.

TRANSLATOR: Good evening. This message is for translation equipment. If anybody needs

TR1
Page 5

equipment for translation services from English to Spanish, the equipment is in the back. We will be happy to interpret for you.

(Foreign languages announcement.)

MS. KOSINSKI: I would like to open this public hearing and formally welcome you to this evening. We are here to discuss the Schuyler Heim -- or Schuyler Heim Bridge replacement project and the various improvements that are proposed for the SR-47 Expressway. We have a draft environmental impact report, environmental statement that is out in circulation currently. The end-of-comment period will mentioned several times. It's October 16th.

There is some individual housekeeping events I would like to take care of before we start. First of all, there's a court reporter here today. So I would encourage you to, when you do come to the microphone to speak, speak slowly. First give your name and speak slowly and distinctly, like I am trying to do. And that way we will have an accurate transcript from this proceeding. There are comment cards, which each one of you should have received when you got here today.

We are going to take these comment cards, and staff will be available to take them. If you

wish to speak or you wish to have comments or a statement read into the record, please fill out one of these comment cards. We are going to try to keep this informal, but somewhat structured, by following the comment card process at this meeting today.

As we mentioned, we have Spanish and Tagalog translators here to help with the translation. And the -- when we get to the comment section, we are first going to be taking comments and statements from individuals who have filled out these comment cards and then go into questions after that.

I would like to introduce our panel. We have two individuals here who are very knowledgeable in this process. The basic situation -- in terms of how we operate here at Caltrans and when working with the agencies -- excuse me -- that the engineering staff works very closely with the environmental staff; and it's kind of an iterative process where there are engineering details that are developed, that goes to the environmental staff for review to see what the impacts are. And then if there are impacts that can be mitigated, that information comes back to the engineering staff. And it's an iterative process to get to the project alternatives that we have today. We are going to have Shahram Vahdat

TR1
Page 7

giving the engineering presentation. And then that will be followed by Harley Martin, who will identify the information on the environmental studies.

The process here today is to provide an overview of these projects, which these two individuals will be doing. And then most importantly, of course, to hear you, the community. It's always nice that we are working with the community to find out the issues that are important. We have had scoping meetings. We've had interactions with the community, and today is just another one of that interactive process.

The testimony that we get today would be, of course, received from the public, as well as from the agencies that are involved. There's a long list of -- testing -- sorry -- there's a long list of agencies that are involved in this process. Caltrans is the lead agency on this environmental document; but of course, we are working very closely with the Alameda Corridor Transportation Agency and their consultant team. The Coast Guard is the Federal cooperating agency. They have a role to submit -- to play in terms of making a decision on this project. And there's other agencies who are identified as responsible agencies.

The questions are when, who, what, and how.

The question in terms of when is for this process that we are going through, when to get involved. The process, of course, is to be involved on a regular basis, but now is a very important step in that process. The who, of course, is you and the agencies that are listed. The community, again, has a very important role to play in this decision-making process. No decision is going to be made until after we hear from the community and listen to everybody's comments and get all those comments by, again, October 16th.

The what is what we are trying to accomplish today, is some clarification of process, if that is needed. That is why this informal process is set up, so you can look at the maps and talk to staff. After the presentations are completed and the hearing is completed, we can go back to that format for those people who need to have some additional interaction with staff on this project. We will be doing some refinements to the process as we go through it. And, again, as I mentioned, we are here to get guidance from you as a part of the community.

The how, of course, is through these written comments that we are asking you to provide by

TR1
Page 9

the 16th, by the verbal comments that we get today. And the important other thing, of course, is, beyond the meeting today, to stay involved in this process.

With that, I am going to introduce our first panel ~~member~~, which is Shahram, who is going to talk about the engineering aspects of this project. Oh, there's one more thing I have got to do. I'm sorry. There are certain -- Bonnie has already been introduced and made a few statements about this project. But I do have cards from other important dignitaries here today, who are here also today to hear what the community has to say. First we have John Dear who is the MAYOR of Carson. John -- Jim. Did I say John when it says -- John Dear. That is the -- John Dear is very, very important because you cannot have a tractor in this country without him. That is Jim Dear. I'm sorry, Jim. We have -- let's see how many more of these names I can mess up. Nick Sramek, who is the commissioner with the Harbor Commission. Nick, how are you doing? Did I get that relatively close?

MR. SRAMEK: Good job.

MR. KOSINSKI: We have Jessica Duboff, field representative for Jane Harmon. Hi, Jessica. Then we have Veronica Zendejas representing

TR1

Page 10

Jenny Oropeza. Veronica, hi. Then we have Cine Avery representing Senator Alan Lowenthal. Cine?

MS. AVERY: Cine.

MR. KOSINSKI: I'm sorry. Then last we have -- oh, we have two more. We have Niki Ienant representing the office of the Vice Mayor; Bonnie Lowenthal, who spoke earlier. Niki. She stepped out top. Then we have -- last is Jacob Haik representing Honorable Janice Hahn, the City Councilwoman from this district. Jacob? There's Jacob. Is there anybody else that I missed before we proceed with the presentations?

Again with a name like Kosinski, I should do a better job on these, but I -- people mispronounce my name all the time. So I guess that is my subliminal revenge. With that, we will go to our presentations.

MR. VAHDAT: Thank you, Ron. Again, my name is Shahram Vahdat. I am going to present the engineering aspects of the SR-47 project.

First, I just want to show you the project location. To give you some orientation on this one, north is up. But the rest of the drawings that is going to come up, north is going to be where I show it to you. Basically this project, the limits of the

TR1
Page 11

projects on the south is the Ocean Boulevard and Terminal Island. The entire project goes within the cities and the ports of Los Angeles and Long Beach, and goes through the north up to the 405.

Now, let's look at the next slide, please. On the projects, purpose, and need. See what was the need for the project, and why did we need this project. The first one is we want to have the structurally and seismically sound bridge over the Cerritos channel to connect Terminal Island to the other side. One of the other needs for this project is we want to have a viable route that connects Terminal Island directly to 405. And this is going to help us to reduce the congestion on both I-710 and I-110. On top of that, we want to make sure that in case of emergency we have a good connection between Terminal Island and the rest of -- the other side of the Cerritos Channel. So these were the needs that caused this project to begin with at the beginning.

Now, let me see -- let's see. How did we respond to these needs? The overall alternatives that we have, they come up with those proposed engineering alternatives. Number one, which is common in all those alternatives, is we want to replace this seismically deficient Heim Bridge with a

TR1

Page 12

fixed span bridge that is stable and is seismically efficient now.

The other one is we want to provide a flyover. Flyover means a direct connector that connects the eastbound Ocean Boulevard to the northbound SR-47, because by the time this project goes on, even very recently, we have some congestion in that intersection; and that is going to reduce the congestion.

And then we want to have a four-lane elevated structure that connects the Terminal Island freeway all the way to -- somehow to 405, basically touches down on Alameda. And, again, all of these improvements we are talking about occur between the Ocean Boulevard to the south and I-405 to the north.

Now, let's look at the different alternatives that we came up with. Here we are proposing five alternatives, but these five alternatives are being prepared by elimination of lots of other alternatives that we went through -- or have been through within the past five or six years. So basically we started with any kind of alternative we can think of and eliminated the ones that are not feasible.

Okay. Let me start with the first

TR1
Page 13

alternative, which is bridge replacement and extension of the SR-47 expressway. This area that you see here, north is to the right. So basically starts from Ocean Boulevard in this area. We have the flyover, which is a direct connector, starts eastbound off Ocean Boulevard, comes directly to the northbound SR-47. We are going to replace the Schuyler Heim Bridge. And the replacement of the bridge happens by basically constructing a path of the bridge on the eastern side of it and then demo the bridge and deconstruct the other half. So the bridge is going to be slightly moved to the east because of construction requirements. And then this four-lane expressway starts from here, all elevated, goes through the Henry Ford, comes down, and goes over north, and comes and touches down on Alameda just south of the PCH. This is PCH. This is north. North is going this way. That is the first alternative.

NEW SPEAKER: Touches down south or north?

MR. VAHDAT: Touches down just south of -- south of PCH. So basically the expressway is elevated all the way up to here. The whole project is elevated and we are going to replace the Schuyler Heim Bridge.

Okay. Let's look at the second alternative, which is called SR-103 extension to Alameda. In this alternative the southerly part of it is exactly the same thing. So basically the other flyover comes over there, replaces the bridge, almost the same thing, but when it comes down, touches down to existing 103. So basically SR-47, after replacement of the Schuyler Heim Bridge, comes down, touches down at the SR-103. So SR-103 is going to be the extension of a route that comes through -- as you know, 103 comes down here at Sepulveda and ends. What we did here, we proposed that starting from here, we go up on elevated structure, raise and go up, go over Sepulveda, go basically kind of west to ICTF, go through this landfill area, all elevated -- everything is elevated, stopping from here when you see a drain -- come down and touch down just south of 405 on Alameda. We have to do some minor realignment of Alameda coming down here to make room for this elevated structure to come down on Alameda. All the elements of Schuyler Heim Bridge, exactly the same as the previous alternative that I mentioned.

Let's look at the third alternative that we came up with. This one is bridge demolition that would preserve the historic part of the structure.

TR1
Page 15

This basically, what we came up with, we have to look at an alternative according to the Federal Section 106 to look, see what happens if we don't touch the bridge, leave the bridge as is, and come up with an alternative.

So the alignment is almost the same as alternative number one, except the alignment has been shifted to the east. So the existing Schuyler Heim Bridge stays where it is, but the whole island shifts to the east. And, again, we have the flyover and coming down, the rest of the project is the same. This is going to cause tremendous impact on the pier that is in that area.

Next alternative is we don't do any SR-47 program, just replace the bridge. And these are the alternatives that we came up with. As you see here, we don't even have the flyover. We just start from here and go up, replace the bridge, and come back and touch down. So this alternative only takes care of the bridge replacement, does not do any other improvement anywhere else.

The one to the last alternative is the transportation system management system. And what we do is we don't replace the bridge. We don't do any improvement to the SR-47. Rather than that we come

TR1

Page 16

and do some traffic improvement like restriping, basically doing synchronization of the signals, eliminating some parking spots to make the street wider, come up with some signage system that provides more information to drivers. For example, let them know that this road is congested, go the other route, or there's some traffic jam here. And basically this alternative does not provide any change on the existing bridge that is seismically deficient.

And last, but not least, basically do nothing. Leave as is and don't spend a penny on that.

With this, I am going to ask Harley Martin to talk about the environmental aspect of the project.

MR. KOSINSKI: While Harry is making his way up here, let me just remind you, if you want to speak at the meeting, please fill out one of these comment cards; and staff will be roaming around to pick them up. So keep that in mind.

MR. MARTIN: Thank you, Shahram. Before I get started on the environmental summary, I want to kind of reiterate some of the project benefits Shahram addressed earlier. But there are also some other project benefits that were incorporated with

TR1
Page 17

working closely with the engineering group, and I will talk about those when I talk about the adverse impacts.

In preparation of the EIS/EIR, we prepared 13 technical studies, air quality, water, noise. We did special multi-modal economic study looking at marine vessel transportation through the Pacific Coast Channel. We prepared the other typical technical studies in support of the EIS/EIR with respect to community impacts, property acquisitions. And I won't go into detail. They are back -- on display back there. You are welcome to take a look at those.

Basically the EIS/EIR concluded that the majority of the impacts were minor. The reason -- we basically worked with the engineering group. We first looked to avoid project impacts. We then looked where we couldn't avoid some issues. We looked to try to minimize those impacts by moving things around and incorporating them into the design to reduce those impacts.

And last, if there were more impacts, we basically incorporated what are called best management practices or other design features to reduce those impacts to less than significance.

The EIS/EIR did conclude that there were some adverse impacts. The most adverse impact were a result of traffic at Ocean Boulevard. That intersection was forecasted to fail in the future. And that is basically the reason why the project incorporated the flyover structure at Ocean Boulevard. That is basically a 10-million dollar mitigation.

There is some other traffic in terms of the southbound Alameda Street connecting to Pacific Coast Highway, the ramp connector as provided as part of project mitigation as well.

And then thirdly, there are also some other traffic improvements at Wardlow Avenue to facilitate truck movements or vehicle movements to the 405 Freeway.

We also had adverse impacts to the Peregrine Falcon, which is known to nest on the Schuyler Heim Bridge. We have mitigation measures incorporated to protect the Peregrine Falcon. We also have some minor impacts with respect to wetlands along the channels, Cerritos Channel

The EIS/EIR and the noise technical study identified some noise impacts. Those impacts were based within the project limits. They are basically

TR1

Page 19

sound barriers proposed for three locations, Leeward Bay Marina on the structure, the Wilmington area, along Alameda Street. There is a wall at grade at Alameda Street west of the railroad right-of-way. And there's also a barrier on the structure as the structure comes back down to grade before PCH.

For alternative two, there is a noise barrier proposed adjacent to SR-103 along Hudson School and the park area along there. Again, similar -- there's a grade structure along the school, plus as the structure takes off up into the air. There is another noise barrier on the structure as well.

The air quality technical study, basically we have construction -- significant adverse construction impacts during the construction period. They are temporary in nature, but one of the other impacts were associated with detouring of the marine vessels. We determined that there was an adverse impact with respect to those air emissions and so proposed, basically, some mitigation measures to compensate those marine vessels' detour air emissions.

We have some unavoidable adverse impacts with this project. They are air quality during

construction and also with cultural resources. The Schuyler Heim Bridge is a national registered eligible historic bridge, and basically demolishing that bridge is an adverse impact. We have worked with Section 106 and the Federal agencies to come up with a mitigation plan, and that's incorporated as part of this project.

Next slide. In terms of providing comments on the draft EIR/EIS -- whoops -- sorry. Where we are in the process, we've started the public review period, August 17th. We are conducting the public hearing tonight. And the public comment period closes on October 16th. We plan to circulate the final EIS/EIR in the winter -- late winter this year. And we hope Caltrans certifies the final EIS/EIR and issues a record in the spring of 2008. And shortly thereafter we would begin final design of the selected alternative and then also issue construction contracts.

In terms of comments that need to be sent in, your personal comments on the project, or the agency that you represent, please contact Ron Kosinski, Deputy District Director, Division of Environmental Planning at Caltrans, District 7, and the address is above. And that is all.

TR1
Page 21

Response to Comment TR1-1

Your support for the proposed project is acknowledged.

MR. KOSINSKI: All right. We have quite a few comment cards, so we are going to charge right into this. And keep in mind that the protocol we are following is we are taking speakers first who have comments or statements that they want. And once those are done we will go into the questions for the various panel members. And we are going to give Jim Dear a priority on this. And we will have Jim and then Harold Williams, Sheri Repp and then Dan Hoffman. So we will start with Jim. Charge ahead.

MR. DEAR: And Jesse Marquez wants a priority here.

MR. KOSINSKI: And Jesse is high on our list also.

MR. DEAR: That's what he told me. Greetings. I'm Jim Dear. I'm the mayor of the City of Carson, and the City of Carson welcomes this opportunity to testify before you at this public hearing regarding the proposed draft for the EIR/EIS for the Schuyler Heim Bridge replacement and the SR-47 Expressway project.

TR1-1 | The project is something that is going to impact the City of Carson greatly. We realize that the goods movement is -- from the ports to the rest

TR1

Page 22

Response to Comment TR1-2

The commenter is referred to response AJ8-1 for a discussion of noise that occurs east of Alameda Street and north of I-405.

Response to Comment TR1-3

The commenter is referred to response AJ8-15 for a discussion of noise mitigation for residents east of Alameda Street and north of I-405.

of the country is something that needs to be not just brought forward in a efficient way, but also a way that is very sensitive to the residents living in the harbor area.

So as the mayor I represent Carson as a member of the I-710 Major Corridor Study Steering Committee. And I am aware of the need for trucks to safely and efficiently access the ports of Los Angeles and Long Beach. Carson recognizes the need to seismically retrofit the subject bridge to protect the public safety and welfare, to continue to maintain a safe port -- transport route that will sustain a major earthquake. The SR-47 Expressway would likely be supported as well if adequate mitigation measures are taken into consideration to protect the Carson community.

The draft EIR/EIS must adequately address potential significant adverse effects of the increased noise levels to Carson residents east of Alameda Street and north of the 405 Freeway. They may result upon the projects -- that may result upon the project implementation due to the expected increase in diesel traffic along Alameda Street.

The draft EIR/EIS must also identify appropriate noise mitigation measures, such as the

TR1

Page 23

Response to Comment TR1-4

Funding for the Bridge replacement portion comes from the Grant Anticipation Revenue Vehicle (GARVEE) bond and is included in the 2008 SHOPP, which was approved by the California Transportation Commission (CTC) on March 13, 2008. Funding for the Expressway portion is included in the Trade Corridor Improvement fund (TCIF) program adopted by CTC on April 10, 2008. A part of the funding for the Expressway portion also comes from ACTA's Demonstration fund, Port fee, and ACTA bond. Contract bidding for the project would be consistent with federal requirements for the application of federal funding. Details on the bidding process is provided on the Caltrans website.

Based on a recent ruling establishing new standards to constitutionally support the use of race-conscious disadvantaged business (DBE) goals, agencies receiving federal aid contracts are required to implement the DBE program.

Response to Comment TR1-5

Your support for project Alternative 1 and your objection to project Alternative 2 are acknowledged.

installation of sound wall noise barriers as was proposed for the Wilmington neighborhood and the Leeward Bay Marina as well.

The project, also, is a project that I am interested in having local people working on the project. So I know that often contractors bring people from out of state to work on projects locally. I am a person who's very interested in employing people who live in this area, in Long Beach, Los Angeles, and Carson particularly, because that is where the project will be taking place.

The alternatives that you have forward -- have on the wall in the back, I would -- after looking at it and studying the data that has been sent to my office, I don't support Alternative 2. I don't think it's a very good alternative. But at the same time I think the best choice for the City of Carson and for the entire harbor area would be Alternative 1. Of the staff -- city staff from Carson are here. So they've reviewed the draft EIR/EIS on the Schuyler Heim Bridge replacement and the SR-47 Expressway project. And they are present to provide additional public testimony for the record.

City of Carson thanks Caltrans for this

TR1

Page 24

opportunity to comment and is prepared to work with Caltrans and the Alameda Corridor Transportation Authority to make this project a success and to protect the public's health and safety and welfare in compliance with the CEQA and EPA.

The City of Carson is currently evaluating the opportunity for installing sound walls along East Alameda Street between I-405 and Dominguez Street. Implementation of the sound walls are difficult since there are residential uses, a church, and other businesses located on Alameda Street.

So the City intends to complete the study by the end of this year. We anticipate that many of the properties along the corridor may need to be acquired to allow for the installation of the sound wall.

We look forward to working with Caltrans and ACTA in identifying adequate resources to provide the necessary sound walls to protect the Carson community. Thank you very much for having me speak today.

MR. KOSINSKI: Next we have Harold Williams, followed by Sheri Repp and Dan Hoffman.

MR. WILLIAMS: Mr. Chair, members of the

TR1
Page 25

Response to Comment TR1-6

The commenter is referred to response AJ8-1 for a discussion of noise that occurs east of Alameda Street and north of I-405.

Response to Comment TR1-7

The commenter is referred to response AJ8-15 for a discussion of noise mitigation for residents east of Alameda Street and north of I-405.

Response to Comment TR1-8

In accordance with Caltrans Noise Protocol, residences of concern in Carson, namely those located east of Alameda Street between Dominguez Street and I-405, and the church and homes between Dominguez and Carson Streets, are considered to be outside the study area for the SR-47 project regarding noise analysis. The study area for noise analysis encompasses locations where the proposed SR-47 project would cause actual physical changes to the roadway system. Nonetheless, ACTA is currently conducting a separate noise study to address the concerns of Carson residents in the above areas.

panel, thank you for the opportunity to comment on
the proposed draft EIR/EIS for the Schuyler Heim
Bridge replacement and State Route 47 Expressway.

My comments express the need for the draft
EIR to adequately address potential significant
adverse effects of increased noise level on a
residential community in Carson east of Alameda
Street that will result from increased truck traffic
along Alameda Street north of the 405 Freeway.

I am familiar with the Alameda corridor
because of my prior position as a public works
director for the City of Carson. And I remain
interested in the success of the Alameda corridor.

However, the success of the ports of Los Angeles and
Long Beach cannot sacrifice the health and safety of
our local businesses and residences. Mitigation
measures must be proposed and addressed, expected
increase in noise levels to existing residences
churches, and schools east of Alameda Street as a
result of project implementation.

The residents of Alameda Street experience
continued degradation of their quality of life to
increased noise volume generated by increased rail
and truck traffic traveling on Alameda Street from
the ports. Residents there have told me that they

TR1

Page 26

Response to Comment TR1-9

The commenter is referred to response AJ8-1 for discussion of noise that occurs east of Alameda Street and north of I-405.

are not able to enjoy their outdoor life, their patios, having barbecues in the backyard because of the noise from the truck traffic along Alameda corridor as well as the rail.

Yet the draft EIR states that there is no environmental justice issues. But based on what I am hearing from my constituents, I believe additional investigations of their environmental justice issues are required to mitigate the significant adverse effects of increased noise levels resulting from the project to the identified residents.

To bring what I have said together in just a few words, let me say this. We do not expect the project to mitigate all of the existing and future impacts within Carson. We do, however, expect the draft EIR/EIS to adequately address potential significant adverse effects of increased noise levels to Carson residents east of Alameda Street that will result from increases in truck traffic along Alameda Street north of the 405 Freeway.

This concludes my testimony. And I appreciate the opportunity to stand before you.

MR. KOSINSKI: Okay. Thank you. Okay.

Sheri.

MS. REPP-LOADSMAN: Good evening. My name

TR1
Page 27

Response to Comment TR1-10

Please see response TR1-8, above, for a discussion regarding noise impacts in Carson north of I-405.

1 is Sherry Repp-Loadsman. I am responsible for the
2 planning activities for the City of Carson. And I
3 appreciate the opportunity to speak this evening.

TR1-10 4 The City of Carson has been, I guess, the
5 host for the Alameda corridor, at least that section
6 that comes through our community. And over the years
7 we certainly have recognized the increase in rail and
8 truck traffic. And as a result, we have had the
9 opportunity to have discussions with ACTA in the
0 past, as well as other organizations, trying to
1 understand how we can provide for appropriate
2 mitigations for the Carson community. We have some
3 unusual circumstances in that we have residential and
4 businesses directly on the corridor. They're
5 serviced by an alley. And their livelihood really is
6 associated with access directly from the Alameda
7 corridor.

8 The problem is that ultimately we need a
9 sound wall in order to protect the 2400 homes that
0 are located to the east. The only way to do that
1 sound wall is really to significantly impact those
2 business. We have recently hired the firm of Tetra
3 Tech to help us evaluate the opportunities for
4 replacing the sound wall and look at the implications
5 as it may relate to those businesses and homes that

TR1

Page 28

Response to Comment TR1-11

The amount of traffic on the roadway is constrained by its capacity. As more trucks use Alameda Street under Alternative 1 and take more of its capacity, less capacity is available for autos. Hence, the amount of automobile traffic on Alameda Street would be reduced under Alternative 1.

are on the Alameda corridor.

Frankly, the problem is way beyond Carson. It's more than we can handle by ourselves. So we are looking to partner with both Caltrans and ACTA to make sure that appropriate mitigation measures are identified for all projects, both past as well as future so that collectively we can have a mechanism that can be implemented in the form of protective measures for our community.

Now, we do plan on having follow-up meetings with all of the involved agencies. But we do find that this particular project -- that it has not evaluated impacts that we believe will be associated with areas north of the 405.

Following me later this evening will be the traffic engineer for the City of Carson. His comments will -- I think will illustrate how there will be more traffic than is currently identified. With that additional traffic, we do believe that noise impacts will increase and, as a result, that there is a need for mitigation.

We look forward to working with you in the future. Thank you very much.

MR. KOSINSKI: Thank you. We have Dan Hoffman, then Elizabeth Warren.

TR1

Page 29

Response to Comment TR1-12

Your support for the proposed project is acknowledged.

Response to Comment TR1-13

Truck traffic cannot be restricted from using Pacific Coast Highway or from traveling through Wilmington to access I-110 or SR-103.

However, trucks are required to use truck routes and are restricted from using some roadways in Wilmington:

- C Street between Alameda and I-110
- Anaheim Street between Alameda and I-110
- Avalon Boulevard between C Street and Lomita Boulevard
- Wilmington Boulevard between C Street and Lomita Boulevard

Further, trucks usually do not enter areas outside of accepted truck routes, or points of destination or origin unless they are making local deliveries. Also, during periods of congestion, no time would be saved by veering off Pacific Coast Highway into surrounding residential communities.

However, based on traffic data, the majority of existing truck traffic northbound on Alameda Street toward Pacific Coast Highway is seeking access to I-405 or SR-91. Therefore, the project is not expected to result in unnecessary truck traffic through Wilmington.

MR. HOFFMAN: Good evening. My name is

Dan Hoffman. I'm executive director for the Wilmington Chamber of Commerce. We do support the replacement of the Schuyler Heim Bridge because it is seismically deficient. And also we support the elevated expressway. We believe it will relieve congestion and pollution.

Moving traffic efficiently, and especially trucks, will benefit business and the community. The project will also allow uninterrupted access to and from Terminal Island, which will benefit the port community and provide a dependable emergency escape route in the event of a natural disaster.

We do have one concern. And that is that the northbound traffic, based on Alternative 1, may enter Wilmington by accessing PCH north of the expressway connection to Alameda, and seek some assurance that a method will be implemented to prevent trucks from entering the community unnecessarily.

Wilmington, being kind of in the middle of the Port of Los Angeles, you know, adjacent to Long Beach, does get its share of -- or unfair share of truck traffic.

We appreciate the thought that has gone

into the mitigation of noise and light with the proposed sound walls for the area of marine proximate to the neighboring residents.

And we thank you for giving us an opportunity for this comment. Thank you.

MR. KOSINSKI: Thank you, sir.

Elizabeth Warren and then Larry Keller and then Jesse Marquez. If people have statements, if you can provide a copy to our transcriber, she certainly would appreciate it.

MS. WARREN: Good evening. My name is Elizabeth Warren. I'm the executive director of FuturePorts. And FuturePorts is an advocacy group. We are membership based and we support clean growth and balance in the port area. A balance between economic prosperity and also the environmental stewardship of our region.

So with that, I would like to thank you for the opportunity to speak this evening. And on behalf of FuturePorts, we would like to congratulate Caltrans and the Alameda Corridor Transportation Authority for producing this draft EIR for the Schuyler Heim Bridge replacement project and of the ports of L.A. and Long Beach.

We think this is a great step in ensuring

TR1

Page 31

Response to Comment TR1-14

Your support for project Alternative 1 is acknowledged.

1 that our ports are efficiently manage the expected
2 growth while mitigating environmental impacts. And
3 we think that this represents a very important
4 project.

5 As you are well aware, the ports of
6 Los Angeles and Long Beach are a major economic
7 driver to our region, providing approximately 500,000
8 jobs in the greater five-county region and more than
9 3 million jobs nationally.

10 At the same time, the ports are potentially
11 facing a major capacity crisis and trying to
12 accommodate the growth of the TEUs, 17.2 million this
13 year and 6.4, increased to 16.81. We firmly believe
14 that port growth and the appropriate accommodation of
15 that corridor -- that growth with the Alameda
16 corridor and these projects are critical, not not
17 only to Southern California and national economy, but
18 also to our air quality.

19 So with that said FuturePorts supports the
20 proposed project of the Schuyler Heim Bridge
21 replacement and the SR-47 Expressway. This
22 alternative represents an important green growth
23 initiative to provide more efficient goods movement
24 to reduce emissions.

25 It's very important that the traffic

TR1

Page 32

Response to Comment TR1-15

Your support for project Alternative 1 is acknowledged.

conflict at the five at-grade crossing be eliminated
and the signalization of the three intersections to
ensure less congestion. We also believe that
additional project benefits, such as replacing the
seismically deficient Schuyler Heim Bridge with a
more safer fixed bridge, is without question of
utmost importance. And the other additional benefits
are also critical to safety and efficiency.

So with that, we think that we have a
common goal of growing our ports and the other
infrastructure to reduce congestion and improve
efficiency, thereby reducing emissions. We look
forward to supporting your efforts to move this
project forward and look forward to working with you
as well.

So thank you, again, for the opportunity to
address you this evening.

MR. KOSINSKI: Thank you, Elizabeth Warren,
Keller and Jesse Marquez, and then Melissa Lin
Perrella.

MR. KELLER: Good evening, Mr. Kosinski.
Thank you. And I thank the members of the panel for
allowing me to speak tonight. I am Larry Keller. I
am the president of the International Business
Association of the Long Beach Chamber of Commerce. I

TR1-15

TR1

Page 33

am here to speak in support of Alternative 1 of the SR-47 project because of the great need for improved infrastructure to efficiently move port traffic in a safe, efficient, and environmentally responsible manner.

TR1-15

I believe that No. 1 is the best alternative because it connects the existing SR-47 from Terminal Island to the four- to six-lane Alameda truck route created by ACTA and allows this route to be effectively utilized to move traffic between the ports and the 405 Freeway and beyond.

Also, it provides a much needed third highway for truck and commuter traffic, not only to serve busy Terminal Island, but to relieve the large amounts of traffic on the 710 and 110 freeways.

An improved SR-47 will allow much needed improvements to be made on the 710 freeway and the Desmond and Thomas Bridges, eventually, by providing a parallel artery for traffic while those works are being done. And connecting the SR-47 to Alameda Street will allow trucks and containers destined for the railroad ICTF facilities to be routed away from west side of Long Beach neighborhoods and schools by routing traffic bound to the rail yards eastbound from Alameda Street instead.

TR1
Page 34

Response to Comment TR1-16

The commenter's support for mitigation in the City of Carson is acknowledged.

1 The SR-47 project will improve air quality
2 by consolidating several truck arteries and, in the
3 process, eliminating many stop signs and traffic
4 lights that cause greater diesel emissions through
5 stopping, starting, and idling as trucks leave the
6 port area.

7 We certainly support any of the mitigations
8 that have been requested by the City of Carson on the
9 east side to protect and improve the quality of life
10 for the citizens living there and the businesses that
11 attend them. And that support would be unmitigated.

12 But in conclusion, I am again speaking in
13 favor of the SR-47 project and specifically
14 Alternative 1. Thank you for allowing me to speak
15 this evening.

16 MR. KOSINSKI: Thank you.

17 MR. VAHDAT: Jesse Marquez, Melissa Lin
18 Perrella, and then Donna Ellington.

19 MR. MARQUEZ: My name is Jesse Marquez. I
20 live at 613 Gulf Avenue here in Wilmington. I am
21 also the executive director for the Coalition for a
22 Safe Environment. We are an environmental justice
23 organization headquartered in Wilmington with
24 representatives in 24 different cities throughout
25 south L.A. County.

TR1

Page 35

Response to Comment TR1-17

Your opposition to the proposed project is acknowledged.

Response to Comment TR1-18

The commenter is referred to responses OB4-5, OB4-11, and OB5-8 for discussions regarding transport of goods by alternative methods.

I'm here to speak against the project as proposed. Unfortunately it appears that Caltrans is still living back in the 18th Century, 19th century. It's obvious Caltrans has not attended any of the ports and goods movement committee meetings, task forces, governor appointed committees, Southern California Associated Government Task Force community meetings because the public has already told every one of these agencies how we would like goods movement to be moved.

In every plan that is being prepared right now, and even the one that has already been completed, such as the Governor's goods and movements plan of the State of California, we, the public, stated that we supported the movement of goods.

However, we want it to be done in an efficient, clean, green, nonpolluting and causing no public harm or public safety. Yet, here you are presenting a bridge, which is basically no different than all prior past bridges, which is only going to encourage the same transportation method. Our environmental justice organization and numerous other environmental justice organizations, environmental groups, public health groups, academic institutions have all proposed to use alternative transportation

↑
systems. We do not support the movement of
containers and cargo via trucks.

Just like ACTA was asked and came forward to work with the Alameda corridor, there were two things that the public demanded and asked that the Alameda corridor incorporate, that the public wanted, and they did not do it.

We had asked that the Alameda corridor have truck lanes in there so they would not be impacting our bridges, they would not be impacting our streets, roads, highways, and freeways; but they did not do that. The public asked that the trains in Alameda corridor be electric so there would be no air pollution that would impact the public health and, they did not do it.

What you are proposing does the exact same thing. It continues polluting trucks. It continues polluting trains. What we ask is that you scrap the whole project and go back to the basics, look into that 21st, 22nd century, whereby there are new emerging technologies. Instead of moving the containers by trucks, we want them done by rail. They can be done by electric rail systems, electric monorail systems, magnetic levitation transportation systems, linear induction systems, and even an

TR1
Page 37

underground gravitational system.

We will not support your project as proposed until you investigate these other technologies. Right now the Port of L.A. and the Port of Long Beach is doing that as we speak. Right now the Southern California Association of Governments is getting ready to issue an RFP for consultants to consider these alternative technologies; and you are moving forward, business as usual. You cannot do that.

Basically, there are no public benefits to what you are doing. Who's going to pay for this bridge? Bottom line, it's Wal-Mart. It's Kmart, Home Depot, Costco, Sam's Club. You are providing a free transportation road to them.

A week and a half ago at the joint task force of that the Port of L.A. and Port of Long Beach, Professor John Husing did a study on the Clean Air Action Plan Truck Proposal in which they calculated what would be the cost to mitigate the purchasing of the new trucks as well as the public health impacts, and there was a cost per container. That fee was \$540 per container.

We, the public, will not finance and support the payment of this bridge from public funds

when basically it is private companies that are being the primary benefactor of this. If you are going to build anything, then it should be paid by those importers, those retailers, those shipping companies that need the product here.

Yes, the cost will be passed onto the public, but let those publics who do not care about the impacts pay the burden of that. If you are going to build something that we would support, something like a tunnel that would be with electric rail system or magnetic system or linear induction systems, such as the ones I have mentioned to be built into that tunnel -- why should residents of Wilmington or Carson have to worry about sound walls? You build a tunnel, there is no sound. There is no noise. Who wants to stare at continuous truck streams all day? We do not want that. So a tunnel, we would not have to see that. We don't want to smell the exhaust. We don't want air pollution in our air. Wilmington right now -- UCLA Medical Center just completed a child asthma study. 23.9 percent of all children have asthma. The highest percentage is in Wilmington Park Elementary School, of which your new freeway is going to be about 100 feet from it. And since you are going to have it built high, that means that the

TR1

Page 39

particulate matter and other pollutants will float over a higher dispersion, even further choking the children and causing them to suffer.

In your mitigation you didn't recommend things that we need. We need to have air purification systems built into the people's home. We need to have air conditioning/heating systems built into the people's homes, and we need homes to be soundproofed.

We will submit a written public comment which will include my remarks. We will also submit to you the names of the companies of these alternative technologies. But we are asking you now not to move forward until you have studied these technologies. Now, yes, some of them are not out of the box right now today, but we, the public, are willing to wait a few years to have Caltrans and other government agencies invest in these new technologies and get the prototype up and running. Electric trains exist today. Electric monorail systems exist today. General Atomics at California State University, Long Beach, the Cnet program. There is a prototype of Maglev technology which has already built a track and levitated up a container. It's now a matter of expanding that experiment and

TR1

Page 40

Response to Comment TR1-19

The commenter is referred to responses OB6-2, OB6-11, and OB6-25, which address growth, the project, and air pollution.

prototype so it can now move it.

There is no crisis to build this bridge right now. It may be seismically deficient that you say due to an earthquake -- I have not seen one meeting by Caltrans or any government agency right now in Wilmington or West Long Beach saying let's prepare for earthquakes. Yet it seems it's perfectly okay to invest to move containers, but not protect the public and our safety.

So I ask you to consider things that I have said. Let's put this on hold because there's more homework that needs to be done. Thank you.

MR. KOSINSKI: Thank you, Jesse. Melissa and then followed by Donna Ellington and Hudson Warren.

MS. FERRELLA: Good evening. My name is Melissa Lin Ferrella. I'm with the Natural Resources Defense Council. Thank you for the opportunity to provide comments on the proposed project. NRDC will be submitting written comments, but tonight I would like to focus on several major concerns that we have with the draft EIR.

TR1-19

First, the draft EIR does not appear to consider the project as enabling port growth, even though the project will enhance port capacity. As a

TR1
Page 41

Response to Comment TR1-20

As stated in the Draft and the Final EIS/EIR Section 1.2.2.2, the existing transportation system within and adjacent to the ports is becoming increasingly constrained with cargo traffic and other vehicular traffic. A Port of Long Beach/Port of Los Angeles study forecasting that the amount of cargo entering the two ports would nearly double between 2010 and 2020. During the same time period, the amount of port-related truck traffic also is expected to double. This large, and rapid, increase in truck volume has the potential to seriously compromise the essential north-south connectivity between the ports and the regional freeway system, thereby slowing and/or otherwise limiting the movement of people, freight, and goods.

The growth scenario used for the analysis in the Draft and the Final EIS/EIR is based on the Port of Long Beach/Port of Los Angeles Transportation Study model developed in 2001, which was based on the Southern California Association of Governments regional model and approved by the Ports for transportation planning and environmental studies. The model was updated in 2004 for the proposed project and other port area transportation planning. The 2004 update incorporates the most current regional and port data, which include the forecast twenty-foot equivalent units (TEU) throughput for 2030 of approximately 44.7 million TEU, with a peak-month estimate of 4.1 million TEU. This compares to the TEU throughput for 2003 of 11.8 million.

Additional growth would not occur due to this project, since Port growth is constrained by other factors, such as terminal and rail yard capacities.

Based on the above, it can be seen that the project is proposed in response to considerable and expected growth at the ports.

Response to Comment TR1-21

See response AJ11-4.

result, the draft EIR does not report any increase in air pollution that will result from the increased ports' ship, truck, train, harbor craft, and harbor handling equipment emissions that will result from the project.

Notably, Caltrans is also a lead agency with the Port of Long Beach for the Gerald Desmond Bridge project, which like the proposed project, is a major connector to Terminal Island. After receiving comments at the Gerald Desmond Bridge EIR failed to analyze impacts from the project's potential cause of port growth, the agencies reissued a notice of preparation back in December of 2005 indicating that they would perform such an analysis in a revised EIR. There's no reason why such an analysis should not be performed for this project as well. Indeed, the California Court of Appeals has noted that where a road project will serve as a catalyst for further development, construction should not be permitted to commence until such growth impacts are evaluated under CEQA.

Second, the draft EIR reports that truck and vehicle emissions that occur in the project area will decrease significantly between the year 2003 and 2030 due to State and Federal regulations. In some

TR1

Page 42

Response to Comment TR1-22

A discussion of greenhouse gases has been added to Section 3.13.1.2 and 3.13.2.2 of the Final EIS/EIR. Climate change is addressed in Chapter 4.0 of the Draft and Final EIS/EIR.

Response to Comment TR1-23

See responses AJ7-2, AJ7-11, and EO1-5.

instances the draft EIR assumes an 85 percent reduction in noxious emissions from such regulations. This data seems to contradict other sources that predict an increase in emissions in the project area due to port growth. We urge Caltrans to reconsider these assumptions.

Third, we were surprised the draft EIR did not include a comprehensive discussion of the climate changes in impacts that will result from the project. In fact, the draft EIR seemed to suggest that, since there are no regulations specifically addressing green house gas emissions, the agencies need not conduct a CEQA analysis of the project's climate changes impacts.

However, the California Court of Appeals had made clear that, even in the absence of a precise or universally accepted methodology for quantifying impacts, an agency must still undertake a good faith reasonable analysis.

Based on these errors and others mentioned tonight, I urge Caltrans to withdraw the EIR and circulate a revised draft for public review. The draft EIR reports the proposed project is located in the communities of Wilmington and Long Beach near hospitals, residences as close as 100 feet away, and

TR1
Page 43

Response to Comment TR1-24

The commenter's concern is acknowledged. The Draft Relocation Impact Report (DRIR) identifies the loss of businesses as a consequence of the project. However, considering the small number of relocated businesses, in relation to the total number of businesses in the city, no significant adverse effect is anticipated in terms of loss of tax revenues to the city.

As stated in the DRIR and in Section 3.3.2.4 of the Draft and the Final EIS/EIR, for individuals, relocation assistance or compensation is available and will be provided to eligible persons and businesses in accordance with the federal Uniform Relocation Assistance and Property Acquisition Act of 1970 and with the California Relocation Act.

Response to Comment TR1-25

The projects mentioned by the commenter - TRAPAC, Channel Deepening, Pier A expansion - are included in the cumulative analysis for the proposed project, and their traffic issues are included in the traffic model developed for both ports and utilized for the traffic analysis in the Draft and the Final EIS/EIR. The traffic projections for all the projects are the same, based on the SCAG 2030 set of socioeconomic data, the official projection for Southern California. Therefore, the commenter's concerns regarding traffic associated with these and other projects have already been incorporated into the traffic model for both ports and in the project-specific and cumulative traffic analysis provided in the Draft and the Final EIS/EIR (see Section 3.5 and Chapter 5.0).

The commenter's concern regarding loss of property in Wilmington is acknowledged. Please see response TR1-24.

11 schools, the closest only 700 feet away.

As a result, it is critical that the draft EIR properly analyze the environmental and public health impacts from the project.

Thank you.

MR. KOSINSKI: Donna, Bill and then Hudson Warren and Colleen.

MS. ELLINGTON: I wasn't sure if it was me that you were calling.

MR. KOSINSKI: Yeah. Sorry.

MS. ELLINGTON: I was really concerned on your Alternative 1, that it removes so many properties from Wilmington. You know, the port and the State and everybody has taken so much of our property. And when they do, they remove it from our tax base. And so when we lose those property taxes, we lose City services. So that is just a huge concern. Isn't it? Mr. Water, is going to lose an awful lot of property here. There's something else.

When I was looking at the cumulative impacts, I don't see -- some of these projects you mentioned, but you don't really go into the full extent of these projects. Like, for instance, as part of the TRAPAC terminal they are proposing relocating the Pacific Harbor line rail yard, which

1 will -- it would occupy that huge parking lot right
2 next to Leeward Bay Marina, 70-acre rail yard. And
3 the construction date is 2009 to 2010.

4 The channel deepening project. You
5 mentioned the channel deepening project. The Pier
6 A -- it's right next to the Pier A west property.
7 It's like a 40-acre soil storage site that's in one
8 of the Wilmington marinas. And I know that the EIR
9 has not been released yet, but the 2002 EIR did
10 authorize 597,000 cubic yards of material to be
11 dredged from the Port of L.A. and disposed of at that
12 site. The construction date is, like, between 2008,
13 2009. So, you know, there's a lot of trucks there in
14 these marinas that will be hauling dirt back and
15 forth.

16 The Pier A west remediation project is
17 scheduled to begin -- I don't know -- I think the
18 middle of the 2008 until possibly 2009. And the Port
19 of Long Beach has estimated 500 to 1,000 trucks a day
20 for at least five months.

21 So what I see is, you know, your project
22 would be between 2009 and 2011. So the whole east
23 basin area would be undersea between 2008 and 2011.
24 So I want to make sure that all this progress will be
25 going on at the same time. Trucks will be on all the

TRI-25

TR1

Page 45

Response to Comment TR1-26

See response TR1-25.

1 same roads that your construction equipment will be
2 on.

3 I will probably submit a report or
4 comments. That was just something that you really
5 need to address in here. You know, that and the fact
6 that I believe the TRAPAC terminal also is talking
7 about adding a northbound and a southbound lane on
8 Alameda Street at the Anaheim intersection and
9 probably all the way up. So that street will be
10 widened anyway. So I am concerned, again, that -- I

11 don't know if this project overlaps, but there,
12 again, we are losing a lot of Wilmington businesses,
13 you know, potential employment. You know, far east
14 Wilmington is now mostly owned by the Port of L.A.
15 and the Port of Long Beach. We have probably lost
16 400 jobs over there just between the Dominguez
17 Channel and Alameda.

18 So it's really a concern. You know, maybe
19 this construction project is creating jobs, but you
20 know, the project itself is eliminating property
21 taxes, businesses, and employment in Wilmington.

22 Thank you.

23 MR. KOSINSKI: Thank you. We have
24 Hudson Warren. Then Colleen Callahan.

25 MR. WARREN: Good evening. My name is

TR1

Page 46

Response to Comment TR1-27

Your support for project Alternative 1 is acknowledged.

Hudson Warren. I am here on behalf of the Foreign Trade Association, which I am vice president, and the Propeller Club of Long Beach, where I am president. We boast members of close to 500 individual companies within the area and those companies employ thousands of people.

TR1-27 We are here to support the EIR process as well as the particular project here, in particular Assumption No. 1. We believe the benefits are significant and will improve the flow of traffic and at the same time believe it is a mitigated approach in terms of the environmental impact.

Thank you.

MR. KOSINSKI: Thank you. Okay. Colleen. Then we have Richard Garland from the City of Carson. And then Andrea Hricko.

MS. CALLAHAN: Good evening. Colleen Callahan with the American Lung Association of California. I thank you for the opportunity to speak today. The American Lung Association of California is concerned about the potential health impacts of the proposed project and what this will do to many of our communities and the region as a whole. Scientific studies prove that air pollution makes people sick. It's killing people. The draft EIR are

TR1
Page 47

Response to Comment TR1-28

See responses AJ7-1, AJ11-2, and EO1-5.

Response to Comment TR1-29

As stated in the Draft and the Final EIS/EIR Section 1.2.2.2, the existing transportation system within and adjacent to the ports is becoming increasingly constrained with cargo traffic and other vehicular traffic. A Port of Long Beach/Port of Los Angeles study forecasting that the amount of cargo entering the two ports would nearly double between 2010 and 2020. During the same time period, the amount of port-related truck traffic also is expected to double. This large, and rapid, increase in truck volume has the potential to seriously compromise the essential north-south connectivity between the ports and the regional freeway system, thereby slowing and/or otherwise limiting the movement of people, freight, and goods.

The growth scenario used for the analysis in the Draft and the Final EIS/EIR is based on the Port of Long Beach/Port of Los Angeles Transportation Study model developed in 2001, which was based on the Southern California Association of Governments regional model and approved by the Ports for transportation planning and environmental studies. The model was updated in 2004 for the proposed project and other port area transportation planning. The 2004 update incorporates the most current regional and port data, which include the forecast twenty-foot equivalent units (TEU) throughput for 2030 of approximately 44.7 million TEU, with a peak-month estimate of 4.1 million TEU. This compares to the TEU throughput for 2003 of 11.8 million.

Based on the above, it can be seen that the project is proposed in response to considerable and expected growth at the ports.

reports that the proposed project be located in communities along West Long Beach and Wilmington, just a few feet away from a hospital, numerous residences, and 11 schools. This area is already referred to as the diesel death zone because community members inhale high levels of diesel pollution.

We know that diesel pollution is toxic, causes cancer and premature death, but research also now finds that risk is elevated for people living near high traffic freeways. It's critical that the draft EIR properly analyze the environmental and public health impacts from the project. The American Lung Association has concerns with the findings of the air toxins analysis, even if the proposed project could potentially reduce the stop and go, and even if the trucks of the future will be cleaner than the trucks of today, the diesel truck -- even though the 2007 standard will not get us completely clean healthy air, this project will inevitably make the situation worse because it will increase traffic by increasing port capacity. This increased capacity needs to be taken into account. Instead, the draft fails to provide straightforward information about current and future traffic volumes.

TR1-28

TR1-29

TR1

Page 48

Response to Comment TR1-30

The amount of traffic on the roadway is constrained by its capacity. As more trucks use Alameda Street under Alternative 1 and take more of its capacity, less capacity is available for autos. Hence, the amount of automobile traffic on Alameda Street would be reduced under Alternative 1.

It is time for better data, but it is also time for a better vision that moves us away from the overreliance on dirty diesel trucks and moves us forward into an era of clean, innovated technologies. Our health and the health of our children depend on smart transportation decisions.

Thank you.

MR. KOSINSKI: Thank you. Again, if you happen to have an extra copy of your presentation or something that you can help our court reporter out on, that will be very appreciated. Richard.

TR1-30

MR. GARLAND: Richard Garland, City of Carson. As you heard earlier one of the primary concerns that the City of Carson has with regard to the project is the potential for noise impacts for the residential neighborhood, Alameda Street. As the noise impacts are directly related to volumes of traffic along Alameda, we took a close look at the traffic volume projections to ensure that they appeared reasonable.

What I found was that the before and after traffic projections indicated the project would result in a decrease in automobile traffic volume on Alameda Street. This would imply after the new bridge is constructed and after a new and improved

TR1

Page 49

Response to Comment TR1-31

Please refer to responses TR1-10 and TR1-30.

roadway link is provided between Terminal Island and Alameda Street that the number of cars on Alameda would actually decrease. This seems unlikely to me.

So I would request that the traffic modeling forecast be reevaluated and adjusted to more logical projection from the without-project to with-project scenario. Then the noise impacts could be recessed, using what I would consider more reasonable traffic projections; and maybe some effective mitigation measures could be identified to mitigate the problem impacts of these affected residential areas.

Thank you.

MR. KOSINSKI: Thank you, Richard. Andrea and then Robert Perel and Marie Castle.

MS. HRICKO: Thank you for this opportunity. My name is Andrea Hricko and I am on the faculty at the Keck School of Medicine of the University of Southern California, where I work with a team of scientists conducting the children's health study, a longitudinal study of the respiratory health of thousands of Southern California children in relationship to the air pollution that they breathe.

I have read major sections of the Heim Bridge Expressway/SR-47 draft EIR, and find that it

TR1
Page 50

Response to Comment TR1-32

The traffic analysis is performed for the AM, MD, and PM peak hours. The existing peak and future peak hour traffic volumes on the Schuyler Heim Bridge are presented in Figures 3.5-3, 3.5-10, and 3.5-17 of the Draft and the Final EIS/EIR. This was clarified to the commenter in a meeting after the public hearing.

Response to Comment TR1-33

Estimates of the numbers of trucks being taken off the 710 Freeway by other rail and road projects are outside the scope of this environmental analysis. Further, estimates as to the numbers of trucks that may go to specific rail yards also are outside the scope of this environmental analysis.

The growth scenario used for the analysis in the Draft and the Final EIS/EIR is based on the Port of Long Beach/Port of Los Angeles Transportation Study model developed in 2001 and approved by the Ports for transportation planning and environmental studies. The model was updated in 2004 for the proposed project and other port area transportation planning and includes the BNSF SCIG and UP ICTF in the background projections for port growth. Therefore, cumulative impacts associated with development of these projects as part of overall port growth were assessed in the Draft and the Final EIS/EIR. Also see response OB6-14.

The ICTF has not been proposed by formal public notices (Notice of Intent, Notice of Preparation), does not have pending environmental documentation, and is not awaiting regulatory reviews or approvals. Therefore, in accordance with federal (NEPA) and state (CEQA) requirements, at this time it is not considered a reasonably foreseeable project that would merit specific analysis, and is not identified as a specific location where trips would begin or end.

Although the SCIG is listed in Table 5-1 of the Draft and the Final EIS/EIR, it is noted on the table that the project was not reasonably foreseeable at the time of issuance of the NOP for the proposed

is -- that it makes dozens of undocumented and
unreferenced claims and repeatedly refers to
documents that Caltrans staff told me I could review
at the public library, all the supplemental documents
that are on the back table.

Several specific items that I question.

One, traffic volumes need to be presented in an
understandable way that people who are not traffic
engineers can understand. We were surprised that we
could not find the answer in this 1500-page document
to the most basic question: How many trucks go over
the Heim Bridge today, and how many will be going
across it in subsequent years? I actually went to
the Caltrans truck count data myself and found
8,000,259 truck AADT, but I couldn't find that
anywhere in the document. In fact, the phrase "AADT"
shows up only one time.

Number two, I would ask exactly how many
road and rail projects are going to claim, without
careful documentation, that they are taking trucks
off the 710 Freeway. Between the claims of the
Alameda corridor being a proposed skid project, the
UPICTF, and now if we add together these projects,
perhaps we are not going to even need that 710
expansion.

project which, as described in Chapter 6.0 of the Draft and the Final EIS/EIR, occurred on January 28, 2002. As shown in Table 5-1, the SCIG NOP was issued in September 2005.

An assessment of environmental impacts associated with construction and operation of the SCIG and ICTF projects would occur separately, as part of the NEPA and CEQA approval process for each one.

Please see Chapter 5.0, Cumulative Impacts, for further explanation of requirements for including a project in the EIS/EIR.

TR1

Page 51

Response to Comment TR1-34

See responses AJ7-1, AJ11-2, and EO1-5.

1 The draft environmental impact report needs
2 to explain these estimates in greater detail. We
3 need an analysis not just a statement as though it is
4 fact. You need to add in the one and a half million
5 trucks that would be going to the proposed skid and
6 the 750,000 trucks to the enlarged ICTF. In fact,
7 those two rail yards are not even mentioned in the
8 EIR even though ACTA has been considering them and
9 discussing them as a major -- projects that they want
TR1-33 for years.

TR1-34 Number three, the health impacts are almost
1 completely dismissed by Caltrans. Caltrans and the
2 Federal Highway Administration, I believe, are
3 disingenuous in saying that they cannot validate the
4 existing studies about proximity to the highways and
5 health impacts. At USC alone we have published three
6 papers showing health impacts with proximity to
7 traffic, with one that lands in one of the world's
8 most prestigious journals. Yet Caltrans and Federal
9 Highway Administration, who have no research
10 scientists, say that they have no ability to validate
11 these studies. We are happy to provide a scientific
12 briefing to Caltrans and ACTA on the studies that
13 many people in the world are referring to with regard
14 to proximity to freeways.

TR1

Page 52

Response to Comment TR1-35

See responses AJ7-2, AJ7-11, and EO1-5 regarding the Health Risk Assessment.

When the commenter inquired as to the availability of the technical studies, she was informed that they were available at the listed public libraries and Caltrans District office and that she could choose to go to these libraries or the Caltrans office to review the technical studies.

Research findings and adverse health comes from air pollution in general. And freeway proximity is now well-documented, and it should be incorporated into the DEIR. Our studies show that children who live near freeways and busy roads are more likely to have asthma, reduced lung function, and school absences. Studies in other communities are showing similar results. The SR-47 Expressway will be 700 feet away from a school and 100 feet away from homes. And yet the DEIR says there will be no adverse impacts. The word "ultrafine" does not even appear in the document, even though there are dozens of articles on ultrafine and ultrafines and health, including two articles from our fellow scientists at UCLA on ultrafine particles being very high in close proximity busy roads and freeways.

TR1-34

I'm almost finished here. The M-7 analysis shows slightly higher mobile source air toxic emissions in Alternatives 1 and 2, but it doesn't say how high. And it says the health effects cannot be estimated. Again, you want to read that air quality analysis, I was told to go to the public library to read it.

TR1-35

When one of the mobile source air toxics is diesel PM and others, Benzene and petadien (phonetic)

TR1

Page 53

Response to Comment TR1-36

By building the SR-47 expressway and providing better access to Alameda Street, the traffic operation of the entire study area improves. Trucks would travel shorter distances to their destinations, and in less travel time.

Further, the growth scenario used for the analysis in the Draft and the Final EIS/EIR is based on the Port of Long Beach/Port of Los Angeles Transportation Study model developed in 2001, which was based on the Southern California Association of Governments regional model and approved by the Ports for transportation planning and environmental studies. The model was updated in 2004 for the proposed project and other port area transportation planning. The 2004 update incorporates the most current regional and port data, which include the forecast twenty-foot equivalent units (TEU) throughput for 2030 of approximately 44.7 million TEU, with a peak-month estimate of 4.1 million TEU. This compares to the TEU throughput for 2003 of 11.8 million.

Based on the above, it can be seen that the project is proposed in response to considerable and expected growth at the ports.

Response to Comment TR1-37

The conclusion used for the PM_{2.5} hotspot analysis was based on the traffic data contained in Section 3.5 of the Draft and the Final EIS/EIR. Depending on the alternative evaluated, the project would improve level of service on segments of the mainline and many intersections when compared to the No Build alternative, as shown in Section 3.5.3.3.1.2 of the Final EIS/EIR. Improving level of service means congestion would be reduced. Table 3.5-10 presents the traffic volumes across the Schuyler Heim Bridge for the project and the No Build alternative in the year 2030.

I think it's not acceptable to say that they are slightly higher, but cannot -- but the health effects cannot be estimated.

I would like to mention something about VMT. I read from the document the emissions decrease for Alternatives 11A3 are due to a predicted decrease in VMT in the study area and an increase in vehicle speed. How is it responsible that building the Heim Bridge and SR-47 Expressway resulted in lower VMT than the current situation of no-build. Clearly Caltrans and ACTA are not accounting for the port growth the bridge and this expressway will induce.

The DEIR states that it is unlikely that PM_{2.5} hot spots will be associated with the proposed project because local accumulation and delay of vehicles will be reduced by the project. This assumption does not document it. What evidence is there that congestion will be reduced in the long-term? To know that, we need to know how many trucks are expected to go across the Heim Bridge in each of the successive coming decades. When will there be a cut point for congestion? So where are all these analyses also of what Pier 8 and other growth from the ports is going to be doing in terms of this pollution on this bridge and expressway.

TR1
Page 54

Response to Comment TR1-38

The commenter's dissatisfaction with the Draft EIS/EIR, including requests to "redo" the document, as well as extend the public comment period, are noted.

Please refer to response OB9-27 for a brief discussion of the adequacy of the Draft EIS/EIR, in accordance with CEQA and NEPA guidelines.

In regard to the review period, the legal period for public comment on the Draft EIS/EIR is 45 days. However, Caltrans provided 60 days, and this extended review period ended on October 16, 2007. In response to public and agency requests, Caltrans provided the requesters with an additional extension of the deadline, agreeing to accept written comments until early November 2007, even though such extensions are not required by CEQA or NEPA. Where applicable, some portions of the Draft EIS/EIR have been revised in good faith response to comments.

Response to Comment TR1-39

The commenter's support for project Alternative 2 is acknowledged.

Finally, I would urge you to take this document back to the drawing to board, to redo it, and provide additional comments, when it is completed. I think that a number of people tonight have expressed and found many flaws in the document. I find that the topics that I discussed are serious flaws that do not allow us to review the document in an acceptable fashion.

TR1-38

If it's not redone and recirculated, then I suggest that there be an extension of at least an additional month for the public to submit comments, since people may want to do modeling. And since the -- and I would also suggest if there is an extension, all the supplement documents be put on a Web site and be available electronically to the public.

Thank you. Thank you for giving me so much time. I appreciate it.

MR. KOSINSKI: No problem. Your presentation cries out for helping our court reporter if you have an extra copy.

Thank you. Okay. We've got Robert Perel, Marie Castle and then Ray Park.

TR1-39

MR. PEREL: My name is Robert Peral and I am the operator of the Leeward Bay Marina. Therefore

TR1

Page 55

Response to Comment TR1-40

Since water flows southward from the Consolidated Slip into the Leeward Bay Marina, the greatest project-related impact to the free flowing water will be experienced at the narrow section of the Consolidated Slip, which is approximately 120 feet wide, before it widens to approximately 375 feet at the section of the channel housing the Leeward Bay Marina. Currently, the bridge over the Consolidated Slip that connects to Henry Ford Avenue includes two sets of multiple large piers in the channel. In addition, the TYC track includes a curved railroad bridge with nine sets of piers (2 each) at the wider section of the Consolidated Slip.

The project proposes to install four 12-foot diameter piers in the wider section of the Consolidated Slip. One of the piers is proposed at the shoreline, two other piers are proposed at the edges of the wider section of the channel, just south of where it widens, and the fourth is located in the middle of the channel. As result, only one of the proposed piers will directly affect water flows.

Since so many piers exist in this segment of the channel where the water velocities slow down as the channel width increases, and because it is so close to San Pedro Bay affects on water flow are expected to be minimal as a result of installing four new piers in the Cerritos Channel.

Response to Comment TR1-41

The traffic report studied the needs for the area and recommended the proposed design. With implementation of the proposed project, in year 2030, at intersections along the new fixed-span bridge and the proposed SR-47 Expressway, the level of service (LOS) is projected to be C or better (see March 2007 Traffic Report, Table 6, Page 33 prepared by Meyer Mohaddes Associates). This is better than the LOS at the same intersections in the event no project is built (see Section 3.5.3 of the Draft and the Final EIS/EIR).

TR1-39
? I think Alternative 2 seems to be a wonderful alternative.

Somehow I have the feeling that I am going to be renewing acquaintances with my friends at ACTA. And I never thought I would survive the last time.

What concerns me is the bridge itself, because I somehow think this is the alternative that you are going to end up with. I always presumed that they were going to have berm on each side and that the bridge would go over the -- and wouldn't basically be in the middle.

TR1-40
: They need to pay particular attention, because I have some experience over 30 years. I think my family has been here about 55 years. And every time they move boulders on the side it deflects the water the flow and direction of water. You are going to be putting in a big piling somewhere. They are talking about they may displace one of our docks, but I have not heard anything -- what should happen -- should the flow be diverted, it could go right into the marina. So I think they have to pay particular attention to this and what the results will be.

TR1-41
: I think they should also consider the fact, even though it's not mentioned at all right now, it's

TR1

Page 56

1 not in the drawing board, some days -- sometime they
2 are going to have to build another bridge right next
3 to this. The reason is, if they don't, everyone that
4 has the other marinas -- which I have one of them --
5 are going to be trapped. The fire department is not
6 going to be able to get in. The police department is
7 not going to get in there, because right now it's
8 difficult. And they talking about an increase of, I
9 don't know, 20 percent, 30 percent, 40 percent. So
10 it's almost an impossible situation. Therefore, they
11 are going to need to build another bridge almost
12 adjacent to where your bridge is going to go. And if
13 you can't expand it, they are not going to expand it.
14 And then there's going to be another problem. So
15 what is starting off as a bridge is going to end up
16 as a dam.

17 So someone is going to have to do
18 something. So maybe you could even figure if they
19 are going to do something, you could -- it -- it's
20 going to be inevitable that somehow when yours takes
21 into consideration what may follow, maybe it can be
22 in conjunction with it, but really should be
23 considered because we don't know how the water is
24 going to be deflected. So it's more of a technical
25 comment that I have at this point. That is basically

TR1-41

TR1

Page 57

Response to Comment TR1-42

The commenter's support for project Alternative 2 is acknowledged.

Response to Comment TR1-43

It is acknowledged that improvements to the existing bridge have been made over the past years. However, the need to continue these high-cost improvements, plus overall considerations of bridge stability, have led to the conclusion that the Schuyler Heim Bridge needs to be replaced.

The seismic deficiencies of the existing bridge are described in the Draft and the Final EIS/EIR Section 1.2.2 (Need for the Project). The evaluation that determined a new fixed-span bridge would be preferable to a new moveable bridge is described in Section 2.1.1 (Bridge Alternatives). As stated, the vertical lift bridge alternatives were dropped from consideration, as they would require significant right-of-way acquisitions, a temporary fixed-span bridge for detour during construction, and interim retrofit of approach spans.

The effects that a new fixed-span bridge would have on marine vessel traffic are described in the Draft and the Final EIS/EIR Section 3.6.3.3. It is estimated that about 13 percent of the vessels that currently use the Cerritos Channel will be able to pass under the new bridge and that, over a period of 20 years, detours by the remaining vessels will cost the marine industry approximately \$23.6 million (approximately \$1.2 million per year). This cost, however, would be offset by the positive economic benefits of the new bridge and improved safety and emergency response, as vehicles would not be required to wait to cross the channel because of a raised bridge, and overall congestion at the bridge would be reduced. In addition, there would be ongoing savings in bridge maintenance costs, as maintenance of the new bridge would cost less than maintenance of the existing bridge.

TR1-41 | it.

2 | MR. KOSINSKI. Okay. Thank you. We have

3 | Marie Castle, Ray Park, and the last card I have is

4 | from Bill Gaskill. Do we have anymore cards? Then

5 | we will go into questions.

6 | MS. CASTLE: My name is Marie Castle. I'm

7 | one of the drawbridge operators at the drawbridge. I

8 | have been a drawbridge operator for 25 years.

9 | MR. KOSINSKI: Could you stand a little

10 | closer to the microphone.

11 | MS. CASTLE: I have been a bridge operator

TR1-42 | for over 25 years. I do think that the extension at

12 | the Alameda to 405, that is a good idea. The 103, I

13 | think that is what it was. It will take a lot of

14 | congestion off the other streets. But a few years

TR1-43 | ago we had a new controller, new computer system in

15 | the bridge, new decking on the bridge, new brakes.

16 | The bridge does need to be painted. I believe

17 | Caltrans took it over in 1975. And as far as I can

18 | remember, because I have been at the harbor since '71

19 | on and off boats, it has never been painted, and it

20 | does need to be seismically retrofitted. They have

21 | retrofitted all the bridges up north, or they are in

22 | the process of doing that, or they have replaced them

23 | with movable span bridges. This is the only one that

TR1

Page 58

they are going to make into a fixed-span bridge.

That's going to eliminate the tug traffic that goes through the bridge. And also there's tour boats that come through, because they want to look at the harbor, tourism. There's a lot of harbor cruise vessels. We also have larger tugs than what is in the draft. Some of the tugs that are in your draft -- they are either -- they are up north or down south. They went someplace. But a lot of them aren't there. We have got a lot of them that are a lot taller. I don't know how tall the SEA RELIANCE is but they are -- it's huge, huge tug. To go around it takes over an hour plus fuel. I know one captain was complaining at the port bridge the other day that it would take over an hour and two hundred plus gallons of fuel. I also know Pack Tow, they are changing their engines over to electric and diesel. So when they are not towing they will be running on, I guess, electricity. I don't know how they are going to do that. I do want to say, yea, for the two harbor train line engines that they have -- you can breathe when they go by. The Union Pacific Railroad, you can't breathe when they go by. I do know they can make vehicles more efficient. Back in the '60s they had a carburetor that was by the name of Fisher,

TR1-43

TR1

Page 59

Response to Comment TR1-44

As described in the Draft and the Final EIS/EIR, various types of bridges were considered early-on when determining how to address Caltrans' finding that the Schuyler Heim Bridge was in need of seismic retrofit improvements. As described, two different vertical-lift bridges were evaluated, but were dropped from consideration because either would require: significant right-of-way acquisitions; a temporary fixed-span bridge for detours; interim retrofit of approach spans; and acquisition of additional rights-of-way at prohibitive cost.

Please see the complete discussion in the Draft and the Final EIS/EIR, Section 2.1.1, Bridge Alternatives.

and it got 100 to 150 miles to the gallon. It could run on three different kinds of fuels, and it was less than, I think, ten working parts. So that can be done. I agree with the other gentleman with the different kind of rail systems. That could work. That is about it.

MR. KOSINSKI: Okay. Very good.

MS. CASTLE: The harbor needs the bridge as a lift span, not as expanded.

MR. KOSINSKI: Okay. Thank you very much. Then we have Ray Park and then Pilar and William will be the next two. And then I am out of cards.

MR. PARK: Good evening. My name is Ray Park. I come before you tonight as president of the Dominguez area property owners association. It's the community north of the 405 Freeway that runs right along Alameda Street. We are the ones that have the residences within 100 feet of Alameda Street. I am not going to bore you with some of the same statements that our fine representative from Carson gave about air quality, noise traffic, but I am going to take a different tack.

Your EIR does not meet any standards or levels of any other EIRs that are written in this whole South Bay. The traffic mock-up is completely

TR1

Page 60

Response to Comment TR1-45

The commenter is referred to the following responses relative to the evaluation of traffic and air quality impacts north of Pacific Coast Highway/Alameda Street: For a discussion of traffic and noise - TR1-30; for air quality discussions related to Carson - AJ8-14, OB3-7, and TR-46 (below); for noise discussions related to Carson - I2-4, I2-9, I2-10, OB3-4, and TR1-31; for traffic related to Carson - AJ8-3, AJ8-5, AJ8-9, and TR1-11.

Response to Comment TR1-46

Residences of concern in Carson, namely those located east of Alameda Street between Dominguez Street and I-405, and the church and homes between Dominguez and Carson Streets, are considered to be outside the project study area in regard to noise analysis. According to the Caltrans Traffic Noise Protocol, the study area encompasses locations where the proposed SR-47 project would cause actual physical changes to the roadway system. Nonetheless, ACTA is currently conducting a separate noise study, independent of this project, to address the concerns of Carson residents in the above areas.

different by number. The area quality, the

environmental effect are different quality. I really think that this was a put-together thing. And one of the biggest problems that we see in it is it says it stops at PCH, no more environmental impacts at PCH and Alameda. But in the next sentence it says "Oh, by the way, the trucks are going to go clear to the 91 Freeway."

There's no remediation measures, no mitigation measures, nothing for the residents of the Dominguez Lincoln Village area. Many, many years ago we were promised sound walls to reduce the noise effect from, then, the new Alameda corridor. We still don't have anything. Folks out there need help. We need air quality controls like Mr. Marquez said with filters and air cleaners. We need sound walls to knock the sound down. We -- there's 2400 homes in this area. That is quite a few folks, and I think that this EIR had better look at some of the impacts in the environmental impact that they are causing on these residents.

Last thing I will say, it's a funny thing to me that you can put some remediation measures to protect the birds, but you cannot protect 2400 homes.

Thank you.

TR1
Page 61

Response to Comment TR1-47

In accordance with the California State Code, Highway and Streets Article 888, the current Schuyler Heim Bridge does not allow or accommodate non-motorized traffic. As a result, the proposed fixed-span bridge also does not provide for non-motorized traffic. In the event another bridge is built over the Cerritos Channel and could accommodate non-motorized traffic, the concern regarding non-motorized traffic routes could be considered by that project, which would be independent from this project.

Response to Comment TR1-48

The project includes improvements to northbound and southbound Alameda Street at the 223rd Street/Wardlow Road connector ramps, and to the connector ramp. These improvements will involve restriping the ramp and Alameda Street and resignalizing the intersection. These improvements are described in Section 2.2.1.1.2 and shown on Figure 2-4e of the Draft and the Final EIS/EIR.

The multi-traffic-signal issue noted by the commenter at the 223rd Street access ramp to the I-405 is outside the scope of the proposed project. However, the City of Carson, in conjunction with Caltrans, has a future project that plans to provide improvements to this area.

MR. KOSINSKI: Thank you, Ray. Okay.
We've got a few more cards here that have come up.
Bill Gaskill, Pilar Hoyos, and William Lyte.
MR. GASKILL: Hi. Hi, folks. My name is
Bill Gaskill. I live on Alameda, just north of the
freeway. There's a couple of items I would like to
address that haven't been addressed yet. I am a
bicyclist and I remember the times when Terminal
Island was accessible by the pontoon bridge, by the
ferry, and by the Henry Ford drawbridge. The ferry
got displaced by the Thomas bridge, Schuyler Heim
Bridge went in, and nonmotorized traffic was not
allowed to go on that bridge. The adjacent bridge,
the Henry Ford bridge, does not allow motorized
traffic. The pontoon bridge was displaced by the
Odessa Bridge. It does allow motorized traffic on
it.

In the State Code, Highway and Streets --
Street and Highways, Article 888, it prohibits the
State from discontinuing nonmotorized traffic routes
when they replace it with freeways. This has been
done in violation of their -- of the State law. I
would like to see this addressed when another bridge
is built over the Cerritos Channel.

Another issue which I was a little

TR1

Page 62

Response to Comment TR1-49

The commenter's support for project Alternative 1 and objection to project Alternative 2 are acknowledged.

irritated at when I talked to the engineer is the transition between the Alameda Street and the southbound 405 Freeway. As it exists now, trucks have to line up at the intersection, turn right to go up to the Portal Road or 223rd Street, turn right again, and then go down to the on-ramp which they turn left, and then onto the freeway. That is one, two, three -- three signals. I suggested to the engineer that they make another on-ramp which would entail one signal. And he suggested that that is not feasible. I think it is. I think it is. Just didn't want to address the issue. I have several other items here. I hope you address them. I would like to hand them to you.

TR1-48

MR. KOSINSKI: Okay. Great. Thank you so much.

MS. HOYOS: Good evening. Pilar Hoyos representing Watson Land Company.

MR. KOSINSKI: Go ahead.

TR1-49

MS. HOYOS: I am here in support of Alternative 1 and to oppose Alternative 2. We are owners of the property adjacent to Alameda in Sepulveda through which Alternative 2 is proposed or noted on the project route. We would bring to your attention that that is not really a feasible

TR1

Page 63

Response to Comment TR1-50

See responses AJ7-1, AJ11-2, and EO1-5.

1 alternative in terms of the impacts because of that
2 property being a landfill -- former landfill
3 property. So you've got some real limitations and
4 restrictions on the ability to build on that
TR1-49 property.

TR1-50 I would also like to echo the concerns and
7 issues that have been raised by a number of the
8 Carson representatives here this evening. The City
9 of Carson has taken great care in good land use
10 planning and having issues of incompatibility of uses
11 by having projects such as Watson Industrial Center
12 and Dominguez Technology Center where you have master
13 plan centers that can accommodate the logistics and
14 corporate uses, serve as an economic engine for the
15 City, provide thousands of jobs and revenue, and
16 being a good neighbor.

17 So I want to call to your attention the
18 need to mitigate -- to address the issues of
19 mitigation for the residents to have this kind of
20 incompatible use. Impasse on the residential areas
21 creates more issues. I think that there's
22 recognition on the part of the company and many
23 others out there tonight for a need for this project
24 in terms of the safety and efficiency and we commend
25 you for taking the lead to do this project and

TR1

Page 64

Response to Comment TR1-51

The commenter's support for project Alternative 1 is acknowledged.

finding the resources to do this project, but it does
 need to consider both the feasibility and terms of
 the routing and mitigation for those areas that are
 potentially impacted, that are sensitive in the
 residential area.

Thank you, and I would be happy to answer
 any questions.

MR. KOSINSKI: Okay. Thank you. Then we
 have William?

MR. LYTE: Yes. Good evening. My name is
 William Lyte. I'm president-elect of the Harbor
 Association of Industry and Commerce. We have more
 than 100 members of major industrial engineering,
 maritime, and increasingly, technology firms involved
 with our organization.

Our governmental affairs committee and our
 board of directors have reviewed the EIR documents,
 and we would like to endorse Alternative 1. We feel
 that it is the best alternative due to the benefits
 of highway congestion relief, seismic safety,
 emergency access, and cost effectiveness.

We appreciate the opportunity to make our
 comments tonight and look forward to helping in the
 process in the future.

MR. KOSINSKI: Great. Thank you, William,

TR1

Page 65

Response to Comment TR1-52

The commenter's support for project Alternative 1 is acknowledged.

especially for your brevity. We have Alex Pugh. I have got Alex Pugh, and then that is it. I have got Juan Carmona, who wants to speak also, but has a question, so let's hold that to last.

MR. PUGH: Thank you for allowing me the opportunity to speak. I will also keep my comments brief, since most of my colleagues have made most of the comments that I would like to as well.

Once again, my name is Alex Pugh. I represent the Los Angeles Chamber of Commerce. As an organization we represent 1,600 members in the Los Angeles County.

The goods movement industry is a major economic driver in the Los Angeles region. And expected container volume growth is expected to double in the next two decades. Efficiently moving goods through the region is the key to seeking green growth at the ports. So the replacement of the Schuyler Heim Bridge and rebuilding the SR-47 Expressway are vital components of this system.

TR1-52 [Therefore, we would like to register our support of Alternative 1 as the best way to effectively manage growth in the coming decades.

Thank you for the opportunity to speak, and we look forward to working with you in the future.

TR1

Page 66

Response to Comment TR1-53

The proposed project is one of the candidate short-term (0-3 years) actions listed in the final Goods Movement Action Plan published in January, 2007. With passage of the Highway Safety, Traffic Reduction, Air Quality and Port Security Bond Act of 2006, \$3.1 billion will be available to help address the wide range of infrastructure, air quality, and homeland security aspects of California's goods movement system. Those funds include \$2 billion for infrastructure, \$1 billion for emission reduction projects, and \$100 million to enhance homeland security.

Funding for the Bridge replacement portion comes from the Grant Anticipation Revenue Vehicle (GARVEE) bond and is included in the 2008 State Highway Operation and Protection Program (SHOPP), which was approved by CTC on March 13, 2008. Funding for the Expressway portion is included in the Trade Corridor Improvement fund (TCIF) program adopted by CTC on April 10, 2008. A part of the funding for the Expressway portion also comes from ACTA's Demonstration fund, Port container fees, and ACTA bond. For further discussion, please see Response to Comment TR2-35.

MR. KOSINSKI: Okay. Thank you. Then

Juan Carmona. And this is the last card I have. We have no comment -- no additional cards anywhere? I'm sorry. I really appreciate your patience on this.

MR. CARMONA: Thank you. Good evening,

Mr. Chairmen, members of the board. My name is Juan Carmona. I am from Coalition for a Safe Environment, and I have several questions for you. I'm not sure if you can respond to these questions, but here we go.

TR1-53: How will Caltrans enact and fund this project?

MR. KOSINSKI: Who's the banker that would be able to answer this question? It's a common -- where is our project manager? Here we go. We are going to ask the project manager, who is the one dealing with funding, I believe, unless there's somebody else here who understand -- I've got to tell you frankly, I am totally confused about the entire funding process for all transportation projects.

MR. SU: I'm James Su, Caltrans project manager. We have programmed the funding to replace the bridge. The rest of the expressway will be funded by ACTA.

MR. CARMONA: Okay. Do you guys have the

TR1

Page 67

Response to Comment TR1-54

The benefits of the proposed project will be borne by the local community and those who utilize the roads in the project area. These benefits include reduced congestion and better traffic flow in the Port area, as well as greater reliance on the bridge across the Cerritos Channel, both on a daily basis and in the event of a major earthquake.

Although an economic analysis is not a requirement of the CEQA or NEPA process, a discussion of cost considerations is provided in the Summary of the Draft and Final EIS/EIR. A discussion of alternatives considered and withdrawn is provided in Section S.5.2, and anticipated costs for the alternatives evaluated are provided in Section S.7. In addition, a detailed discussion of the alternatives development process is provided in Section 2.1 and Section 2.3 of the Draft and Final EIS/EIR.

Response to Comment TR1-55

Maximum subsidence occurred in 1951-1952 with groundwater withdrawal and oil production from the Wilmington oil field. Since then, water injection has been implemented to reverse and/or minimize subsidence, and imported fill has been used to re-grade the area. Also, oil production has lessened since then. The proposed bridge replacement will disrupt small amounts of soil that will quickly be filled with CIDH piles that sit on bedrock. No subsidence is expected. During construction, a licensed geologist will monitor the area for unexpected subsidence.

Soil erosion is limited to areas with exposed soil. During construction, temporary construction site best management practices (BMPs) will be employed to eliminate potential soil erosion. After construction, exposed soil areas will be paved or possibly landscaped. Additional soil erosion is not expected in the future.

funds now?

MR. SU: Excuse me?

MR. CARMONA: Do you have the funds now?

MR. SU: For the bridge replacement only.

MR. CARMONA: Who benefits most from the proposal? The public? Business?

MR. KOSINSKI: Okay. First of all, the EIR/EIS is really supposed to deal with the definition of the project and what the impacts are, the adverse impact primarily.

So who benefits -- you know, the legislature attempted several years ago to pass a bill requiring that economic analysis on projects, but it failed.

So who benefits the most would be a difficult question to answer, I suspect. We cannot -- we can put it in the record and see if we can come up with a successful answer for you.

MR. CARMONA: Okay. And also, in the EIR/EIS report they mention something at subsidence which created a lot of problems in the past with this Schuyler Heim Bridge, soil erosion. And I was wondering, is that going to be a continuing problem in the future for this project for this bridge?

MR. KOSINSKI: I'm trusting that one of our

TR1

Page 68

Response to Comment TR1-56

The commenter's concerns regarding the visual effects and noise, odor, and air quality impacts associated with the proposed project are acknowledged. As detailed in the relevant sections of the Draft and the Final EIS/EIS, all actions will be taken to mitigate, to the maximum extent feasible, adverse impacts of the proposed project.

engineers will be able to answer that question. I
 assume that the answer is affirmative.

NEW SPEAKER: The whole island is
 subsiding.

MR. KOSINSKI: Okay. I guess that is not a
 question we will be able to answer.

MR. CARMONA: Okay. Also, I notice that
 there was translators in English and Spanish and
 other languages, and I was wondering why there
 weren't any flyers prepared in these languages.

MR. KOSINSKI: Good question. Do we have
 them?

NEW SPEAKER: If they want one, I'm sure
 Connie --

MR. KOSINSKI: Yeah.

MR. CARMONA: Okay. You guys have them?

MR. KOSINSKI: Yes.

MR. CARMONA: And lastly, the community
 does not want a bridge for the following reasons:
 The public does not want to see it. The public does
 not want to hear it. The public does not want to
 smell the exhaust from the trucks. And the public
 does not want air pollution to affect their health.

So in consideration of the bridge or
 another alternative, maybe a tunnel can be conceived

↑
1 somehow. I am not sure how. This is something you
2 guys could take up and prepare some type of statement
3 for it. And that is it.

4 MR. KOSINSKI: Okay. Again, thank you for
5 your patience. Okay. That is the last card I have.
6 Are there any other individuals that would like to
7 speak? Seeing none, I am going to remind you, again,
8 that you have until October 16th to respond. If you
9 leave the meeting today and you would like to --

10 MS. HRICKO: I thought you said you were
11 taking questions.

12 MR. KOSINSKI: You would like to come up
13 and ask a question. Yes.

14 MS. HRICKO: I'm sorry. Wasn't there going
15 to be time for questions from anybody in the
16 audience?

17 MR. KOSINSKI: The format we follow for
18 questions is the same format we follow here. And
19 that is why Juan got held up. If you have a
20 question -- what we are trying to do is make sure
21 that the reporter is able to accurately collect this
22 information. So the questions are on these cards.
23 So if you want to ask a question, please fill out
24 another card. We will be happy to give you another
25 one. You can come up and ask the question.

TR1
Page 70

So we will stall for a little bit, and I will give you some wrap-up information. And, again, if other people have additional questions that they would like to ask, please fill out a card; and we will take them in the order that we receive them. In closing the meeting, other than for the questions that will be coming up next, we have copies of the document in the back for those who need them. Certainly, if there are technical studies that people want, our staff should have those available. Hopefully, they brought them today. If they haven't brought them, then we should be able to take the card of the person who wants that study and supply it to them very quickly. With that, we will take about a one-minute break.

(Recess.)

MR. KOSINSKI: Are you ready?

MS. HRICKO: Whenever you get your audience back, if there is anybody staying.

MR. KOSINSKI: Okay. If everybody will please quiet down, we have one more card with a question on it. It's from Andrea Hricko from USC who spoke earlier. You want this card back?

MS. HRICKO: I know the question.

MR. KOSINSKI: Okay.

TR1

Page 71

Response to Comment TR1-57

The commenter is referred to response OB4-20 for a discussion regarding public hearing notification, distribution of flyers, and copies of the flyers.

MS. HRICKO: My question is I want to know -- this is Andrea Hricko from the University of Southern California, Keck School of Medicine.

And I would like to know whether the residents who are closest to the elevated expressway, who live near Henry Ford Avenue and Alameda Street 100 feet from the expressway and along with the students and parents at Wilmington Park Elementary School, were they flyered by either ACTA or Caltrans so that they knew to come to this meeting? Were there any notices given to residents in the most impacted area?

MR. KOSINSKI: Do we have somebody that is familiar with our noticing process? Maria. I can -- while we are tracking down Maria --

MR. MARTIN: There were hand flyers passed out.

MS. KOSINSKI: Maria is going to answer that question. While she's coming up here, let me just assure you that we had large ads in the newspaper, ran them twice in local papers. And they were not carried in some sections. For example, in the national section of the L.A. Times on Friday the 17th. So the notification process that we follow, in our opinion, goes beyond what the normal requirements

TR1

Page 72

Response to Comment TR1-58

The commenter is referred to response OB9-6.

are for the CEQA. With that, Maria will give me a little summary of the notification process.

NEW SPEAKER: Yes. We gave flyers to students in the area surrounding all of the alternatives. So they were distributed about two weeks prior to this meeting. We have the actual boundaries for you, if you would like that. And the number that were actually distributed, I can provide that to you as well.

MS. HRICKO: The next question I have for you is, finally having got my hands on -- and I will put it back if I need to -- but, my hands on the air quality technical study, is there anyone who can answer a question? There's a table in here that is showing the total daily traffic volume, but it's in millions of vehicles. And fortunately, we don't have millions of vehicles going across the roadway. So I am wondering if anyone can explain this. And it also shows no increase -- no increase from 2003 to 2011 in the number of vehicles going across the Heim Bridge, which is completely implausible. So I am wondering who can we talk to to make any sense out of this Caltrans data?

MR. MARTIN: What table are you referring to?

TR1

Page 73

Response to Comment TR1-59

In regard to the review period, the legal period for public comment on the Draft EIS/EIR is 45 days. However, Caltrans provided 60 days, and this extended review period ended on October 16, 2007. In response to public and agency requests, Caltrans provided the requesters with an additional extension of the deadline, agreeing to accept written comments until early November 2007, even though such extensions are not required by CEQA or NEPA.

MR. KOSINSKI: You know, this may be an item that you might handle after the public hearing. We should be able to give her a copy of this report.

MS. HRICKO: Can I take this one, please?

MR. KOSINSKI: These are public documents, so you should be able to have a copy of this. If that is the only one we brought, then other people should be able to --

MS. HRICKO: Thank you I have one last question.

MR. KOSINSKI: Sure.

MS. HRICKO: Can someone tell us tonight whether or not you will grant an extension for public comments? I assume that you probably can't tell us whether you plan to redo the entire EIR, but can you tell us whether we can assume that there will be an extension of the comment period based on all of the problems that were raised this evening.

MR. KOSINSKI: We will have to sit down and evaluate what we learned today and -- before we make that decision. Have we -- the October 16th would be the 60th day of the comment period, I assume, or longer. So we've gone to the legal limits.

MS. HRICKO: Minimum. The Port of Los Angeles recently extended the TRAPAC deadline by

TR1

Page 74

Response to Comment TR1-60

The commenter is referred to response OB4-19 for a discussion of the complexities of the environmental analyses.

a month or two months.

MR. KOSINSKI: Right. We just extended the 405 to 130 days. So that is a long period. See, we will evaluate that. I can tell you that, informally, you know, if you get us comments within a week after the 16th, we certainly will still accept your comments. We don't have a situation where, if we receive a comment on the 17th or the 18th, that we drop them in the trash. We, as a matter of courtesy, respond to them and make sure that all comments that we get in a reasonable time after the comment period are included in the public record.

MS. HRICKO: And I wasn't quite clear. Is there someone that we can talk to if we, you know, question the traffic analysis or the data, we just don't even understand the tables. Is there someone from Caltrans we could call after this meeting?

MR. KOSINSKI: We have two people here who are the traffic and the air quality consultants that are involved in the preparation of this document. They are sitting over there. So you can probably talk to them right now.

MS. HRICKO: Okay. And get their cards.

MR. KOSINSKI: And those are two areas where, unfortunately, over the years, I think because

TR1

Page 75

of the technical nature of those studies, as well as the litigation that has ensued, they have become more and more complex because of these technical and legal requirements. So I certainly sympathize and empathize with this issue.

MS. HRICKO: Well, I have read a lot of these documents. And this one, with regard to the traffic, is quite incomprehensible compared to other EIRs that I have read, so --

MR. KOSINSKI: Right. But our technical staff and traffic -- it might be sort of a technical specialist that deals with the entire freeway system in California. And as a consequence they take the analysis very seriously and they are very technical oriented. So they are not as simple as some of the other studies that you normally see.

MS. HRICKO: I would just suggest that you should not have to be a traffic engineer to be able to read one of these.

MR. KOSINSKI: I agree with you.

MS. HRICKO: Thank you.

MR. KOSINSKI: Okay. Any other questions? Comments? Comment cards? Okay. With that, I am going to hereby close the public hearing and remind you about the 16th as the end of the comment period

TR1
Page 76

and that all comments will be addressed in the final
EIR/EIS.

With that, drive carefully.

(Proceedings concluded at 8:20 p.m.)

Response to Comment CC39-3

The Health Risk Assessment was performed in accordance with the latest guidance outlined in the "Air Toxics Hot Spots Program Risk Assessment Guidelines" (California Office of Environmental Health Hazard Assessment [OEHHA, 2003]). OEHHA methodology is recognized by CARB and SCAQMD and does not recommend that a public health survey be completed as part of a health risk assessment. Also, please see Response to Comment TR2-40.

Response to Comment CC42-3

Your opposition to the proposed project is noted.

Response to Comment CC42-4

Section 1.2.2.1.1.1 of the Draft EIS/EIR states: "FHWA and Caltrans have documented that the existing Schuyler Heim Bridge does not conform to current seismic criteria (Caltrans, 2002). Using the Caltrans 1996 Seismic Hazard Map, peak bedrock acceleration at the site is estimated to be 0.6 g¹. However, it has been determined that, due to the ongoing deterioration of the bridge, it would only require a seismic event with a bedrock acceleration of 0.3 g to cause collapse of the main bridge spans; an event with 0.1 g acceleration would result in collapse of the approach spans."

Following the 1994 Northridge Earthquake, every bridge structure in the state underwent a thorough seismic safety evaluation. Of the bridges identified as seismically deficient, the Schuyler Heim Bridge is one of only two bridges that have not been replaced or retrofitted. The project is proposed to address this need.

¹ Bedrock acceleration is the horizontal movement of the earth (the solid rock below the soil surface) caused by an earthquake. Its magnitude is measured in terms of (g), the acceleration due to gravity, which represents the force with which the earth moves (e.g., 0.1 g is the acceleration equal to 10 percent of the force of gravity).

- What magnitude earthquake would it take to knock down the bridge? CC42-4		
- Where is this money coming from? Can't we use it in other more needy causes. CC42-5		
- As for as the pollution + cancer risk, we did not really get a clear # on what it would be? We simply got a % of what the present diesel changes are doing and are piggy backing off other. CC42-6		
- Did not address hazards heard athletes, disabilities, asthma, insurance cost, water + ocean, animal CC42-7		
- Jobs here in wilington? employees or franchise? CC42-8		
- Unless we say to traders you cannot access the community they are going to keep taking same routes. CC42-9		

Comment Card 42

Page 2

Response to Comment CC42-5

Funding for the Bridge replacement portion comes from the Grant Anticipation Revenue Vehicle (GARVEE) bond and is included in the 2008 State Highway Operation and Protection Program (SHOPP), which was approved by CTC on March 13, 2008. Funding for the Expressway portion is included in the Trade Corridor Improvement fund (TCIF) program adopted by CTC on April 10, 2008. A part of the funding for the Expressway portion also comes from ACTA's Demonstration fund, Port container fees, and ACTA bond. For further discussion, please see Response to Comment TR2-35.

Response to Comment CC42-6

Specific risk levels are listed in Tables 3.13-17 through 3.13-20 of the SDEIS/RDEIR. For a discussion of asthma and other sub-chronic effects, please see Response to Comment AJ15-5. In addition, the commenter is referred to Response to Comment TR2-20.

Response to Comment CC42-7

The Draft EIS/EIR provided environmental analyses for hazards, water, biological resources, and other natural resources. The environmental consequences and impacts for these areas can be found in the Physical Environment Sections 3.12 (Hazardous Waste/ Hazardous Materials), 3.9 (Hydrology, Floodplains and Oceanography), 3.10 Water Quality and Stormwater Runoff, and 3.16 (Biological Resources). It is unclear what impact, if any, the proposed project would have on insurance costs. Please see Response to Comment CC42-6.

Response to Comment CC42-8

The proposed project is estimated to produce approximately 11,000 construction jobs, and generate about \$47 million in taxes. It is anticipated that most of these jobs would come from local employers within the greater Los Angeles area, including Wilmington and Long Beach. Construction job growth is also discussed in Section 3.2 (Growth) of the Draft EIS/EIR.

Response to Comment CC42-9

Your comment is noted.

Comment Card 43

Response to Comment CC43-1

Please note this record of your comments.

Response to Comment CC43-2

Your support of the proposed project is acknowledged. No changes are proposed as part of this project to railroads. With mitigation, no significant health impacts are anticipated associated with the proposed project. Please see Response to Comment CC42-8 regarding potential constructions jobs in Wilmington and Long Beach.

<p>I live on Mahar Ave which is between Dennis Off Fern half a block away from Avalon & 2 blocks away from Robidoux which is the quote on quote affected area. Two of my sisters live on Robidoux and I have nieces and nephews which go to Wilmington Park elementary that school is a block from the "Shamas" that are going to be effected. I work at a Doctors office in Wilmington which is on Avalon Blvd. I'd say about 95% of the patients I get live in Wilmington. Its so sad to see about 80% of the patients come in due to asthma, allergies, cough & breathing problems. I myself suffer from those as well due to living in Wilmington for my whole 24yrs (all my life)</p> <p>I do not think this expressway project should be done.</p>	
<p><small>We welcome your participation. Response to Comment CC45-1

Your name has been added to the mailing list.

Response to Comment CC45-2

Please note this record of your comments.

Response to Comment CC45-3

The purpose of the HRA is to evaluate the incremental health risk changes due to the project operation. The HRA was conducted following OEHHA Guidance, which is recognized by CARB and SCAQMD, and has taken into account different vehicle types and different fuel types within the project area. Any increase from marine vessel emissions would mostly occur at the outer harbor area where the ships would be rerouted, which would be further away from the harbor and any sensitive and residential receptors. The emissions would also be offset at some level by eliminating the vehicle idling emissions at the bridge by building the fixed-span bridge. Implementation of the project would not cause any changes in rail operation. Therefore, locomotive and marine vessel emissions were not included in the HRA analysis.

Response to Comment CC45-4

For a discussion on efforts to reduce diesel emissions in the Port area, please see Response to Comments TR2-18 and TR2-31.

Comments	I don't believe HRA is accurate as it does not contain data on Industrial, locomotive, non-truck, & boat emissions. CC45-3 To my knowledge, there is no AQMD data in HRA. I find it shameful that those in favor of project would dangle "jobs" as a strong incentive for the project, rather the focus should be on peoples health risks. Unfortunately, First, First, the money sought & eventually probably received for this project should be directed at reducing diesel emissions. CC45-4 Then we can proceed to ^{go ahead} proceed with this project. Health first & economic gain after.

The following slides were included as a part of a commenter's presentation during the public meeting on January 27, 2009. Please see TR2-9 to TR2-14 for comments and responses relating to the slides.

SR-47 Expressway Recirculated DEIR & HRA:

Concerns about Faulty Assumptions,
Faulty Traffic Estimates,
the Health Risk Assessment Relying on
those Faulty Estimates,
& Failure to Consider the Latest
Scientific Research Findings

Presentation by

Andrea Hricko, Director
Community Outreach and Education Program
Southern CA Environmental Health Sciences Center
Keck School of Medicine
USC
January 27, 2009

Health Risks

- The EIR must include a summary of all the health data showing that living close to air pollution from a busy road or freeway is linked to:
 - Asthma and reduced lung function
 - Cardiovascular disease and mortality
 - Reproductive and developmental problems

Focus: Traffic Data

Why do the traffic data matter so much?

- The public needs to have confidence that a new freeway infrastructure project uses accurate traffic data because all of the Health Risk and Mobile Source Air Toxics Assessments rely on them.
- When the traffic data are wrong, then all of the analyses are wrong, and the public has no way to know whether or not the project will cause an increased risk to public health.

HRA Accuracy

- “The level of travel activity is typically the most important variable in completing air quality related project assessments.”*
- Quotation from UC Davis analysis of HRA for Caltrans, commenting on the need for better traffic data, in the Recirculated DEIR

What ACTA and Caltrans Have Repeatedly Stated

- The SR-47 Expressway will “divert truck traffic from local arterial streets.... ”
- It will “reduce truck traffic on surface streets.”

Widely-held public assumptions based on what ACTA and Caltrans say in their press releases and statements

#1: There will be fewer trucks on local surface streets

#2: There will be fewer trucks going past Hudson School than today

- *“ Wouldn’t it be a good thing for health to have fewer trucks going past Hudson School?”*

The reality

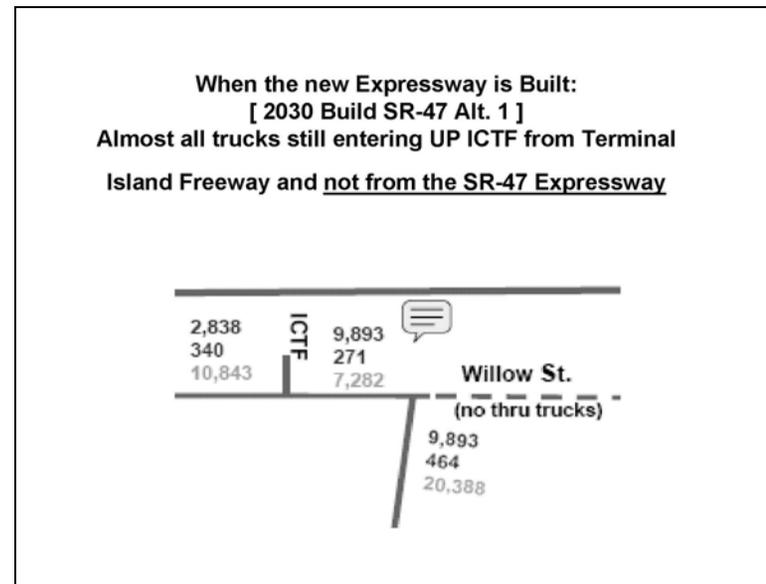

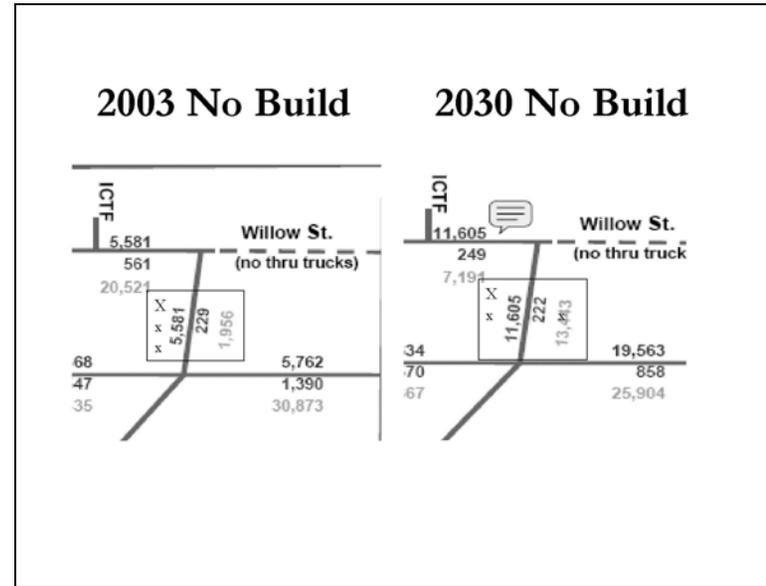

- There will MORE traffic after the Expressway is built – everywhere.
 - In 2030, after the Expressway is built, there will be twice as much truck traffic going past Hudson School as today
 - 2003: 5500 trucks/day
 - 2030: AFTER the SR-47 Expressway is built, 9800 trucks/day

Explanation?

“We never said that there would be fewer trucks than today...”

The Union Pacific Railyard (ICTF)

- Right now the UP ICTF is FULL
 - It cannot handle any more trucks unless it expands.
- Yet the HRA traffic maps show that in 2030 there would 2x as many trucks on the 103 Freeway as now
 - on their way to a FULL rail yard that can't handle them!

Traffic engineers' explanation?

- "... the expected increased traffic from the Ports will follow current traffic patterns through the port area."
 - Port trucks will take their old routes after the new Expressway is built
 - a completely erroneous assumption

In reality....

- If UP is expanded, the railyard claims it will use the SR-47 and Alameda Street
- That would 11,000 more trucks on Alameda Street

These trucks are on the maps in the HRA

BUT traffic engineers chose to put them all onto the SR-103, past Hudson Schools

So they are not counted as being on the new Truck Expressway!

What does this mean for the accuracy of the HRA?

- Falsely claiming that trucks in the future would take their “regular, old routes,” artificially decreases the number of trucks on the new Expressway.
- This serves to decrease the calculated diesel cancer risk.
- Showing an accurate – and larger – number of trucks on the Expressway would necessitate re-doing the HRA.
- It would mean that the calculated diesel cancer risk would increase along the Expressway.

What does a larger cancer risk mean?

- Houses now impacted would have a *higher diesel cancer risk* than the current HRA estimates
- *More houses* would be impacted
- *A larger area* would be impacted
 - Maybe even Wilmington Park Elementary School?

How would trucks get to the SCIG?

SR-103 SAY ACTA AND CALTRANS ENGINEERS in letter to Andrea Hricko

- "Regarding SCIG, the most direct route will be SR 103, even if the SR- 47 project is built."
- "The traffic analysis does not account for SCIG, but if it did, the trips on the SR-103 would increase by 6,000 and the increase on the Expressway would be nominal."

SR-47 SAY ACTA AND THE L.A. CITY COUNCIL

City Council Resolution 07-1005:

ACTA adopted an Expanded Mission ... WHEREAS, one of the projects that ACTA has identified is improving State Route 47 (SR-47), which includes a 2.2 mile expressway...that will connect the port complex on Terminal Island to Alameda Street **in order to access near-dock rail facilities**, local warehouses and other transportation corridors; ...

In other words....

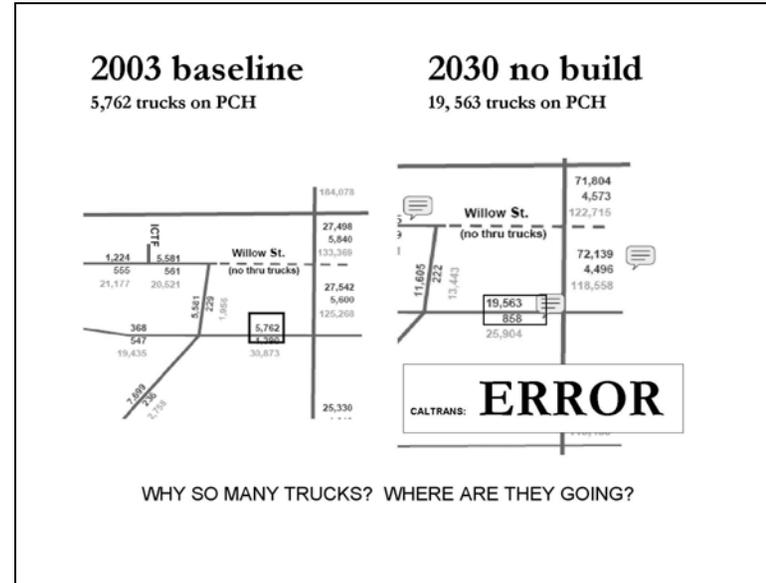

- The City Council: a major purpose of the Expressway is to carry trucks to the near-dock railyardS.
- If these trucks also traveled on the SR-47 to the SCIG, there would be 11,000 MORE trucks on SR-47 than shown on maps
 - plus a total of 11,000 more if UP ICTF were expanded! = 22,000 more trucks than shown

Trucks not counted as traveling on SR-47 Expressway

- 11,000 – UP ICTF
- 11,000 -- proposed BNSF SCIG
- = 22,000 more trucks a year than calculated

- The 10/million risk is based on 28,000 trucks a day on the SR-47 near PCH in Wilmington
- What would it be if there were actually **51,382 trucks a day?**

Major Errors?

Conclusion about Traffic Data and a Request

- There can be no confidence in the current HRA or MSAT analyses because the traffic data upon which they are based contains incorrect assumptions and multiple errors.
- The traffic data must be redone and peer-reviewed by another independent firm, with the public able to see the errors and final results shown to the public.
- After the traffic data are redone, the HRA and MSAT analyses must be redone using the peer-reviewed/corrected data.

SCHUYLER HEIM BRIDGE REPLACEMENT DRAFT ENVIRONMENTAL
AND SR-47 EXPRESSWAY PROJECT
DRAFT EIS/EIR
PUBLIC HEARING
TUESDAY, JANUARY 27, 2009
6:00 P.M.
REPORTER'S TRANSCRIPT OF PROCEEDINGS

REPORTED BY: MARIE T. MELLGREN, CSR No. 9442

1 JANUARY 27, 2009, WILMINGTON, CALIFORNIA

2 6:49 P.M.

3
4 MS. HAHN: I'm Councilwoman Janice Hahn. And
5 aside from being a councilwoman representing
6 Wilmington, I also serve as chair of the Alameda
7 Corridor Transportation Authority or vice-chair,
8 depending on the year.

9 And it was the Board of the Alameda Corridor
10 Transportation Authority that heard the public loud and
11 clear about this project. And we heard that you didn't
12 feel that you had enough information about this
13 project.

14 We also asked for a health risk assessment of
15 this project. We wanted to know what impact this
16 project would have on people's health, their homes,
17 their lives. So that is going to be part of this
18 assessment. But we hope tonight that many of your
19 questions, your concerns, your fears, everything -- we
20 want you to ask and we hope that your questions will be
21 answered.

22 But before we go any further, the City of
23 Wilmington suffered a great tragedy early this morning.
24 And I just came from another community meeting. And I
25 was informed that early this morning a man killed his

1 wife, killed his five children, ranging in ages from
2 two to eight, and then he killed himself. And it was
3 such a tragedy for a small community in Wilmington. I
4 thought it would be appropriate right now if we just
5 all took a moment of silence to remember this family
6 and the tragedy that unfolded early this morning.

7 (A brief moment of silence.)

8 MS. HAHN: Thank you.

9 I know we're talking about the SR-47 project
10 tonight, but I want you to know, anybody in this room,
11 if you have issues, if you have problems, if you have
12 issues at your job, if you have -- are you worried
13 about your home going into foreclosure, whatever it is,
14 please know that there is help available for you, there
15 are resources where we can help you through rough
16 times. And I think this whole country is going to have
17 rough times. And Wilmington is not going to be spared
18 from rough times.

19 So please call my office. We're able to give
20 you numbers that can help you with a number of issues.
21 Please don't ever think that you are alone or that
22 anything is too big or too insurmountable that you
23 would ever consider taking your own lives or a member
24 of your family. We want to all be a community. We
25 want to take care of each other. We want to pay

1 attention to each other. We want to make sure that
2 this tragedy never happens again. It's so sad. I can
3 barely comprehend what happened today.

4 So back to this tonight. There's many of us
5 that believe this is a positive project. It has
6 positive benefits for the community. But there
7 certainly are impacts that we want you to be aware of.
8 And we want this tonight to be a workshop format, that
9 everyone here that can answer your question, please
10 this is -- the reason we held this meeting tonight was
11 because we did not feel like you had enough
12 information. We've tried to get the public comment
13 period of time extended so that you have opportunity to
14 weigh in on this project.

15 So, please, this meeting is for you to
16 understand what this project is and understand the
17 alternatives that can or cannot happen. And more
18 importantly, have all your questions answered. So I
19 hope this is informational. It's valuable. And I hope
20 that the concerns that are brought up, we will find a
21 way to answer those, to mitigate those so that this
22 project really is a benefit to this community and not a
23 burden to this community.

24 So with that -- what's happening?

25 MR. HERNANDEZ: Good evening.

1 On behalf of ACTA, I want to welcome you to
2 the public meeting on the project's health risk
3 assessment.

4 My name is Manny Hernandez and I'm one of
5 ACTA's community coordinators. I hope that you found
6 the workshop portion of this meeting helpful. We will
7 have three presenters who will speak to you about the
8 project in general, the health risk assessment, and the
9 traffic analysis.

10 Following the presentations, we will open the
11 floor for comments. Those who wish to speak will have
12 three minutes to make their comments. Please respect
13 the time limit so all who wish to speak can do so. The
14 comments will be recorded and made part of the written
15 record of this meeting and responses to those comments
16 will be included in the final EIR/EIS documents for the
17 project.

18 Caltrans, the lead agency for the project,
19 will consider these comments before reaching its
20 decision regarding certification of the environmental
21 documents.

22 Note that any comments that were previously
23 submitted following the September 2007 public meeting
24 will also be responded to in the final EIR/EIS
25 documents. Tonight's meeting focuses on the additional

1 information that were submitted for review on
2 November 20th, 2008, which included the health risk
3 assessment that was performed at the request of the
4 ACTA Board, the ACTA Board in response to comments made
5 of the September public meeting.

6 Please fill out the speaker cards in advance
7 and give them to Maria or Liz. They're over there.
8 Please raise your hands.

9 If you do not wish to speak but want to
10 submit comments tonight, please fill in your comments
11 on the cards. Both the speakers' oral comments and
12 those comments on the cards will be made part of the
13 record with responses included in the final EIR/EIS.

14 You will also have the opportunity to file
15 written comments with Caltrans by Friday of this week,
16 January 30th, 2009, by e-mail, fax or letter. Those
17 who require more time may request Caltrans in writing
18 before Friday to grant them additional time.

19 These requests will be considered by Caltrans
20 on a case-by-case basis. We encourage all of you to
21 get your comments in by the deadline so they can be
22 addressed. These instructions will be repeated at the
23 end of this meeting.

24 We will begin with a seven-minute long video
25 describing the project followed by three speakers.

1 Please hold all your comments until after the speakers
2 finish. Those who have submitted speaker cards will be
3 called in the order they were received. Three names
4 will be called at a time to help speed the process.

5 And with that, I would like to introduce the
6 SR-47 video to provide you with an overview of the
7 entire project.

8 (A seven-minute video was played.)

9 MR. HERNANDEZ: I would now like to introduce
10 Art Goodwin, the director of planning for the Alameda
11 Corridor who will provide an overview of the project.

12 Mr. Goodwin.

13 MR. GOODWIN: Thank you very much.

14 I'm just going to provide a very brief
15 overview of the project and some of the milestones and
16 dates that we've been working on.

17 The first thing I'll provide is the project
18 alternatives. Something that you may remember we had
19 in the drafting of the EIR/EIS here in this room
20 September 27, 2007. So that's a year-and-a-half ago
21 now.

22 There were six alternatives. The two
23 alternatives that received the most attention and
24 provide the most -- address most of the goals of the
25 project are really two.

1 Before we talk about those two, the area in
 2 blue that you can see here down on the Cerritos
 3 Channel, in this area, this is Cerritos Channel and, of
 4 course, Terminal Island. The area involves replacement
 5 of the Commodore Heim Bridge. You may know it's a
 6 fixed bridge. Two lift bridge will replace or
 7 reinforce the top of the fixed bridge as part of the
 8 seismic retrofit plan that the State of California has
 9 had in operation for a number of years.

10 Alternative one is in red and that is the
 11 line that comes from just south of where Cerritos --
 12 excuse me -- Dominguez Channel comes into the Port of
 13 Los Angeles area, which proceeds along Henry Ford
 14 Avenue, curves and comes up at a downward grade from an
 15 elevated structure at Pacific Coast Highway. That was
 16 the only preferred alternative as a result of the
 17 environmental impact studies, EIS, a year-and-a-half
 18 ago.

19 The second alternative, instead of going out
 20 this way, this will remain as it is. You will come and
 21 make a new connection on the existing 103 Freeway. You
 22 would go up under -- or over, excuse me, Anaheim Street
 23 up to Pacific Coast Highway, which is right here. And
 24 about halfway between Pacific Coast Highway and Willow
 25 Street, Sepulveda Boulevard, you would rise up on an

1 elevated structure over the new Union Pacific Railroad
 2 tracks, crossing northeasterly -- going in a westerly
 3 direction, excuse me, and you'd come back on Alameda
 4 Street just south of the 405 Freeway.

5 Those are the two alternatives that have the
 6 most analysis performed on.

7 Project benefits: Replace the Heim moveable
 8 bridge with an earthquake-safe fixed bridge; provide an
 9 elevated expressway to Alameda Street at Pacific Coast
 10 Highway. Two traffic studies reduced freeway truck
 11 congestion by nearly ten percent, both on the 710 and
 12 on the 110 Freeways.

13 Reduce future truck congestion on certain
 14 local streets. Studies have been shown that truckers,
 15 if you can get them on a more direct route to where
 16 they want to go versus using some local streets and
 17 secondary highways, particularly in the west Long Beach
 18 areas, they tend to go to where the capacity is. And
 19 that would be on the new SR-47 Expressway.

20 Provide alternative route to local warehouse
 21 and existing rail yards. If you're familiar with the
 22 area north of Wilmington on Alameda Street into the
 23 City of Carson, there's something like 25 to 30 million
 24 square feet of warehouse distribution centers in and
 25 around the City of Carson.

1 The number of trucks that currently use the
2 710 Freeway will go up and cross over on Willow Street
3 and the 405 and they'll go then north on Alameda Street
4 to get into that region. So if they're coming from
5 Terminal Island, particularly this would be a much more
6 direct route than trying to go over the bridge, up the
7 710 and so forth.

8 Reduce delays and emissions at five railroad
9 crossings and three signalized traffic intersections
10 along Henry Ford Avenue. Based on the objective car
11 watchings and the traffic subsequent to that, those
12 five signalized intersections would be right underneath
13 by where Henry Ford Avenue merges onto the ramps at
14 SR-47. It would be Anaheim Street and it would be up
15 by where Henry Ford goes in Alameda Street.

16 So there's three signalized intersections
17 here. If you're on the top of the structure, you would
18 go through all of those without stop signs. And it
19 still would be all local access on the local streets
20 below.

21 It's been estimated that we will generate
22 about 11,000 construction jobs and create about \$47
23 million in taxes.

24 A brief history of the project: The project
25 really started back in 1981. When I say "the project,"

1 it was SCIG that recommended the studies that created
2 the basis of the Alameda Corridor to improve highway
3 and railway to the Ports of Los Angeles and Long Beach.
4 Those studies came out in 1981.

5 From 1982 to 1995, various agencies went out
6 to seek the funds to build this lower portion of the
7 Alameda Corridor, if you will. Two various federal and
8 local funds, they were secured to construct the
9 passageway and improvements along the route south of
10 the 91 Freeway.

11 And by the way, Alameda, Henry Ford is
12 actually designated State Route 47 based on this early
13 SCIG work in 1981/1982 time frame.

14 From 1985 to 2004, agencies including the
15 City of Carson, Los Angeles County, City of Los Angeles
16 and ACTA completed projects to widen Alameda Street
17 essentially to six lanes. And they also built six
18 highway rail grade separations essentially from Anaheim
19 Street north all the way to the 91 Freeway along
20 Alameda Street.

21 In 2001, ACTA and Caltrans began a
22 partnership to study the feasibility and prepared
23 environmental documents for the SR-47 to complete the
24 highway portion of the overall project and concept that
25 SCIG put forth over 30 years ago now.

1 What is the schedule for the EIR/EIS? This
 2 will show you what can be placed for this evening. The
 3 first is the notice of preparation of EIR/EIS, which
 4 was published in July 26, 2004 in the federal register.
 5 There was a public meeting held on September 9th, 2004.
 6 One in the morning and one in the evening. The draft
 7 EIR/EIS was circulated August 17th, 2007. I mentioned
 8 we had a public hearing right here in this room on
 9 September 25th, 2007. Again, in the afternoon and one
 10 in the evening.

11 Right after that meeting, as Chairman Hahn
 12 mentioned, the ACTA governing board requested that an
 13 HRA be prepared for the project based on the concerns
 14 that the other governing board had from the comments
 15 that everyone here put forth.

16 So with that started in earnest in the middle
 17 of November 2007, we recirculated the supplemental
 18 information. We generated in that subsequent period of
 19 time, including the HRA. That was started officially
 20 on November 20th, 2008.

21 And here we are today, on January 27th, 2009
 22 to provide you additional information and discuss the
 23 findings of the supplemental information and the HRA.

24 What's the next step after tonight? As we
 25 mentioned, Caltrans is the lead agency on the EIR/EIS.

1 They will receive the comments that have already been
 2 taken in this supplemental period. They will
 3 incorporate those responses and comments, including
 4 everything that's said today either by transcription,
 5 by written or fax or e-mails to Caltrans, that
 6 information is provided to you in the back table if you
 7 don't know who to contact or how to contact them.

8 So once they get this information, they'll
 9 start working and incorporating the responses and
 10 comments. And by February -- I think we should point
 11 out these are tentative dates -- February 20, 2009,
 12 they'll incorporate this EIR/EIS. Caltrans will make a
 13 decision then regarding the certification. The EIR
 14 would be anticipated in late February/March time frame
 15 of 2009.

16 After that, Caltrans forwards the EIS to
 17 FHWA. And it's the Federal Highway Administration.
 18 And it's the federal determination on the ROD, record
 19 on decision, that would start in the March 2009 time
 20 frame.

21 There's a public comment period again on the
 22 final EIS. And that would be in the March/April 2009
 23 time frame. And then the FHWA decision regarding the
 24 ROD we anticipate that would happen in the April/May
 25 2009 time frame. I want to point out these are just

1 our tentative dates. Caltrans is the responsible
2 agency for doing those things.

3 With that, I'd like to introduce
4 Dr. Peggy Lobnitz who will be discussing the HRA
5 itself.

6 MR. HERNANDEZ: Before Dr. Lobnitz comes up,
7 I'd like to apologize for the lighting. There's been
8 problems today in the building about the electrical
9 power. And unfortunately, we can't turn the lights
10 down because if we do, we may not have any more lights
11 tonight. So I apologize sincerely about the lighting,
12 but that was beyond our ability to control right now.

13 Thank you.

14 DR. LOBNITZ: So as Art said, I'm
15 Peggy Lobnitz and I'm here to discuss the health risk
16 assessment that we performed for the project.

17 And basically, I'd like to go over why we did
18 the health risk assessment with respect to what kind of
19 methods we used to analyze the risks, what we found
20 out, what it means in terms of, you know, your
21 propensity to get cancer, and then what we're going to
22 do about it. That's what I'm going to cover.

23 Basically, the sources of the project risks
24 are cars and trucks that would be traveling over the
25 bridge and along the expressway. And if you look at

1 all the pollutants that are generated from both cars
2 and trucks, it's the exhaust is basically the thing
3 that causes cancer. But, remember, this is a bridge
4 and expressway. There will be cars and trucks in this
5 project whether or not this is built. The only thing
6 that will really change when this project is built is
7 where that traffic goes.

8 And the other thing you should recognize is
9 between now and 2015, overall emissions in the project
10 study area will decrease. Let me show you what I mean.

11 Thanks to the good work of the EPA,
12 California Resources Board, there's been several
13 regulations that have been passed over the last few
14 years that will significantly reduce pollution.

15 If you look at the year 2003, the daily
16 amount of diesel exhaust that went into the community
17 was about 900 pounds per day. By 2015, when the
18 project has started, it will be reduced to 577 pounds.
19 And by 2030, down to 455 pounds.

20 So that's one good thing we can say is that
21 pollution levels are going to go down. And if you want
22 to look at it on a percentage basis, the diesel exhaust
23 is recommended in that last column at PM 2.5. So in
24 three years, we're expecting 26 percent reduction. By
25 2015, 36 percent. By 2030, 50 percent.

1 UNKNOWN SPEAKER: Can you define the study
2 area?

3 DR. LOBNITZ: The study area is between
4 Terminal Island, the 91 Freeway, the 110, and the 710.
5 But there still will be truck exhaust in the study
6 area. And that's why we're here tonight.

7 Just to let you know, Caltrans and Federal
8 Highway Administration really --

9 UNKNOWN SPEAKER: They're wrong.

10 DR. LOBNITZ: -- but Alameda Corridor
11 instructed their staff to conduct one. And there were
12 a couple of reasons for that.

13 Number one, they really wanted to understand
14 the risk of the community. And, number two, if there
15 really were problems, they wanted to make sure they
16 took care of them. So that's why they brought me in to
17 do the study.

18 So this is kind of new ground for health risk
19 assessment. Normally when we do health risk
20 assessments, it's on a big refinery or a chemical plant
21 and the source of pollution is in one place. But with
22 a transportation project, cars are moving around all
23 the time. So it's a little bit harder to quantify.

24 But what we did is we consulted with the
25 South Coast Air Quality Management District, California

1 Resources Board and made sure that we adopted all the
2 major protocols for truck emissions and estimated
3 health risk and incorporated that into our analysis.

4 So we basically looked at four exposure
5 assumptions, so four different populations that we're
6 really worried about.

7 Number one is residential exposure. I know a
8 lot of you are probably residents. So what we assumed
9 for this group is that you stay in your house for 70
10 full years and actually you didn't leave, you were
11 there 24 hours a day, and you may have taken a two-week
12 vacation, but you basically stayed on that piece of
13 property for 70 years. So we tried to make it as
14 conservative as possible.

15 The second group we went to was people that
16 go to the parks. We assumed that a person went to a
17 park every single day for two hours, except when they
18 went on vacation.

19 And then for school workers and people who
20 worked in parks, we assumed they spent their entire
21 career in one place for 40 years, they worked eight
22 hours a day and they were there 245 days a year.

23 For students, we assumed they went to one
24 school from K through 12. They never moved schools.
25 They were there for six hours and they were there

1 during the entire school year.

2 So every assumption we used, we tried to keep
3 conservative so it really would be the worse case or
4 what people would think the worse situation.

5 So what we did is according to a really good
6 data on port trucks, that's the latest information
7 about the ages of the trucks, what kinds of trucks they
8 were, a lot of regional planning study that are
9 prepared by local government agencies, we used those to
10 estimate for non-port trucks and cars, then we laid the
11 whole project area on a grid.

12 We wanted to be able to show up at a hearing
13 like this and tell you, based on your neighborhood,
14 what would happen. So then we calculated all the
15 emissions. Then we used a very sophisticated model
16 that calculated what the concentrations of the diesel
17 we thought would be all over the entire area. And then
18 we plotted it on maps, then we overlaid it with land
19 use to figure out what kinds of land use matched up to
20 what kind of risks.

21 So hopefully you'll find that much more
22 meaningful than just looking at a table with numbers.

23 We looked at two scenarios. Both of them,
24 like we talked about, for residential exposure living
25 with the 70 years of exposure. But one of them assumed

1 that we have no new regulation after 2020 and that the
2 port growth will continue to grow to 44 million TEUs by
3 2030.

4 The other assumption in the scenario used was
5 everything is stationary by 2030. No other regulation
6 after 2030, even though we know we're going to have
7 them. No growth because we're assuming that as
8 regulations get more stringent, it will balance off the
9 growth. We really believe that the 2015 scenario is
10 really the one that's most representative of conditions
11 over the entire project life.

12 So the results -- I'm going to show you in a
13 minute -- but basically we're showing quite a bit of
14 regional benefit in the entire project area. There are
15 some localized impacts, but we think they can be
16 mitigated.

17 And there's a real difference -- I'm going to
18 show in a second -- between alternative one, bridge
19 replacement and SR-47; alternative two, which goes
20 through the SR-103.

21 Alt one, there's no problems with students
22 going to the park or workers. But we do show some
23 residences, about eight, that are over the significant
24 threshold, which is ten in a million.

25 In alt two, where it goes out to the 103,

1 there's still no problems with students and
 2 recreational workers, but there are problems with park
 3 recreation, student workers and about a hundred fifty
 4 residences.

5 So let's look at the picture. The green area
 6 of this map show project improvements. So you can see
 7 that for the majority of the project area, we moved the
 8 trucks off of all of the surface streets. This is the
 9 green area. When you move them off the 110 and put
 10 them on the dedicated expressway, there's over 40,000
 11 residents that all of sudden have better air quality
 12 directly as a result of redistributing the trucks,
 13 getting them off the major side streets.

14 And you know what that's like. There's a
 15 safety issue associated with that as well.

16 Now, the great thing about Alameda is that
 17 it's mostly commercial/industrial. And what we're
 18 showing you here is residential 70-year exposure. So
 19 there's really not a lot of houses -- well, there's no
 20 houses here, frankly.

21 There's a group of houses here that are
 22 uncertain what the exposure would be. But let's look
 23 at the other alternative. You go up the 103 and you'll
 24 see that the risk here is a lot fatter, a much bigger
 25 area. And land use is worse. You've got a lot of

1 pools. You've got residences.

2 So in this scenario, you know, you have about
 3 a hundred and fifty residences. So we prefer
 4 alternative one for many reasons, but for health risk
 5 purposes, this is also superior.

6 So what does ten in a million mean? I mean,
 7 how do figure out what that is.

8 Right now in this community, the cancer risk
 9 is 250,000 in a million. That means one in four people
 10 will get cancer. That's really really high. From air
 11 toxins only. So if you take out all the other kinds of
 12 cancer, it's 1300 to 1800 per million. And because
 13 cancer risks are so severe, not only here but in the
 14 entire south coast area, the agencies have adopted a
 15 threshold of significance that basically says if you do
 16 anything greater than ten, you've got to mitigate it.

17 So that's the criteria we used. If it's less
 18 than ten, it's okay. If it's greater than ten, we just
 19 got to do something about it. So we looked at the
 20 houses in question. And we think we've come up with a
 21 very feasible method.

22 There's some really good high-efficiency
 23 filters that can be used to filter the air in your
 24 house. And not only would it take care of the ten in a
 25 million, but it will probably bring you way down in

1 terms of your 1800 to 1300 overall cancer risk. And
2 that makes it very favorable. And we have done this on
3 other projects and it has been successful. And we plan
4 to have it all installed and ready to go before we ever
5 start to operate the expressway.

6 MR. HAMRICK: Good evening.

7 I'd like to briefly discuss the traffic study
8 that was done with the same agency with the health risk
9 assessment. They actually provided the traffic numbers
10 that resulted in the air quality analysis.

11 The traffic study contains and was based on
12 what we call the high growth estimated growth up to 44
13 million TEUs per year. This is an estimate that's
14 generated by the port in its own internal plant. And
15 it's also been used for -- if you looked at other
16 documents, other projects that have occurred over the
17 past few years by the ports, the same numbers were used
18 by this project.

19 Traffic volumes conservatively ranked ICTF
20 based on port projected near-dock trips as opposed to a
21 facility to capacity constraint. Those are a lot of
22 words. What it really means is some of the growth of
23 the ports will result in more near-dock truck ships,
24 truck movements to and from the ports. We did assume
25 that in the analysis. And again, that's an assumption

1 directly from the port's own documents and their own
2 forecasts.

3 What this did by assuming the high-growth
4 forecast and some increase in trucks to and from ICTF,
5 we made sure that we did not underestimate localized
6 traffic and back and localized health risks. We wanted
7 to be very conservative.

8 The other alternative would be to assume that
9 those trucks go up to, for example, the Inland Empire
10 and they don't return here. So we wanted to make sure
11 that we didn't assume them away.

12 The model that we used, the traffic model,
13 used both local and regional, we call to-scale traffic
14 forecast. What that means is we assumed and included
15 all growth that's going to occur up to the year 2030
16 based on the regional agencies' projection of growth in
17 San Pedro and Wilmington and throughout all of Southern
18 California, and we included that as the background
19 condition.

20 We also accounted for all truck-restricted
21 routes. We made sure that the traffic analysis didn't
22 allow trucks to go on routes that are currently, by
23 ordinance, not allowed. For example, Wilmington,
24 portions of Santa Fe, Avalon, et cetera.

25 The model includes all freeways and major and

1 secondary streets in the area. And the traffic model
 2 chooses routes based on roadway capacities and local
 3 and regional origins and destinations. In other words,
 4 it's a realistic model of how truckers move.

5 Next slide.

6 MS. HRICKO: Can you go back and explain
 7 number two in a little more detail because it isn't
 8 what worked then? And someone asked what that meant,
 9 asked whether it meant trucks are going to the ICTF if
 10 they can't go in there.

11 MR. HAMRICK: It does assume that there would
 12 be an expansion in what we call near-dock or off-dock
 13 interval movements. That's taking the container from
 14 the port that is going to get onto your train. For
 15 example, be destined to some area outside of
 16 California, whether it be Dallas or the mid west or
 17 whatever.

18 So this assumes that there will be a number
 19 of containers going from the port terminals to an
 20 off-dock rail yard. ICTF is the one that's here. We
 21 know about that. It also assumes that there will be an
 22 expansion of some type of off-dock facility, whether an
 23 ICTF or a different one. That wasn't specific, but the
 24 port's own forecast do assume that with the 44 million
 25 TEUs, there will also be an increase in the near-dock,

1 off-dock being built and the containers that are
 2 stacked.

3 MS. HRICKO: I'm sorry. I --

4 MR. HERNANDEZ: Can we just hold the comments
 5 until the end, please, so we can get through the
 6 presentation? We're almost done.

7 MS. HRICKO: What we don't understand is why
 8 you would show those trucks going to the ICTF when they
 9 can't get in there as opposed to them going past Hudson
 10 School as opposed to taking your brand new expressway
 11 that Mr. Goodwin said would be the preferred route.

12 Why would they go up the Terminal Island
 13 Freeway rather than take your beautiful new expressway?
 14 Why would you not show that on --

15 MR. HAMRICK: If I understand your question
 16 correctly, the model actually has some of these
 17 increase in truck trips within the ICTF area on all
 18 facilities. So we didn't tell the traffic model to put
 19 them up to the 103 or the 47 or the 710 or the 110 or
 20 Alameda.

21 We let the model determine that, looked at
 22 that to see if it was reasonable. So when you actually
 23 look at the results, all of those routes are being
 24 used. Obviously, the new 47 would be a brand new
 25 four-lane facility so the truckers -- many truckers

1 would like that facility from, you know, particularly
2 from Terminal Island to get to, for example, the ICTF
3 area or Carson distribution centers.

4 Some will still prefer to take the 710,
5 depending on where they're coming from, but some will
6 still prefer to use Alameda Street. So there is a
7 balance of all of the routes being used.

8 MS. HRICKO: Thank you.

9 MR. HAMRICK: Thank you.

10 Next slide.

11 What this slide shows is basically you see
12 some negatives there. These are changes on a daily
13 basis, on a percentage basis if the project would be
14 built. And then at the bottom you see a couple of
15 changes. What this basically says is that by building
16 this facility, there's going to be an enhancement of
17 capacity in the area where the new facility is.

18 Some truckers -- again, some, not all -- will
19 choose to shift their routes to use this. Some will
20 remain in the 710. But these numbers show that, for
21 example, about ten percent of the trucks that would
22 have occurred by 2030 on Harbor Freeway and about ten
23 percent of the trucks that would have used the 710
24 Freeway would have shifted over to the new truck route.

25 Henry Ford would get the biggest change

1 because this route is directly parallel. Why would
2 they go through Henry Ford and have to go through
3 railroad crossings and intersections when they can take
4 an expressway facility?

5 Also, the 103 would be reduced. Again, there
6 would still be trucks in the 103. And then there would
7 be increases along the new route at the Heim Bridge and
8 Alameda Street as a result of this new increase in
9 capacity.

10 So that concludes my traffic presentation.
11 And I'll turn it back over to Manny for the rest of the
12 program.

13 MR. HERNANDEZ: Before I call the individuals
14 who would like to comment in the order that it was
15 received, let me once again reiterate, as I mentioned
16 earlier, if you'd like to speak, please fill out the
17 speaker card in advance and give them to Maria or Liz.

18 If you do not wish to speak but want to
19 submit comments tonight, please fill in your comments
20 on the cards. Both the speaker's oral comments and
21 those comments listed on the cards will be made part of
22 the record in the final EIR/EIS.

23 With that, I'd like to remind you that for --
24 so that everyone will have ample time to make their
25 comments, there's a three-minute rule and the light is

TR2
Page 15

Response to Comment TR2-1

Your support of the proposed project is acknowledged.

Page 28

1 green. When the light goes off, the three minutes have
2 expired. So please keep that in mind so that all the
3 others who wish to make comments have their time as
4 well.

5 So the first individual -- and I'm going to
6 call three in order -- is Anthony Musicich, Bill Walsh
7 and John LaCross.

8 Anthony.

9 MR. WALSH: Anthony -- I'm Bill Walsh. I'm
10 speaking for Anthony Musicich as well. Anthony
11 Musicich is the president of the Harbor Association and
12 I'm the secretary/treasurer. So I'd like to read his
13 statement first and then I'd like to do mine briefly.

14 Our organization represents approximately 300
15 companies that either do business in the port or are
16 involved in the international trade. Our organization
17 is supporting the Schuyler Heim Bridge replacement and
18 SR-47 Expressway.

19 We feel that the replacement is necessary due
20 to the age of Schuyler Heim Bridge and our concern is
21 the seismic collapse, thus causing injury or death.
22 Additionally, a collapsed bridge could cause a serious
23 hazard in the navigation and closure of the back
24 channels of the port probably for several months.

25 A new safer, from a seismic prospective,

TR2

Page 16

Response to Comment TR2-2

Your support of the proposed project is acknowledged.

Page 29

1 fixed bridge would divert traffic and still take trucks
2 into and out of the port. It would provide an
3 alternative route to near-dock rail yards and eliminate
4 traffic.

5 We realize that there are some health risks
6 associated with this project, but those health risks
7 can be appropriately mitigated. We feel that every
8 effort should be made to protect these people's health
9 that would be seriously affected according to the HRA
10 and that demolition and construction be conducted in a
11 safe and responsible manner.

12 Because of the benefits of a new bridge, our
13 organization supports the project and feels that the
14 project will effectively improve the flow of goods into
15 and out of the port. The fact that it will replace the
16 existing infrastructure with a safer infrastructure
17 speaks for itself.

18 With that remark said, I'll just do my own
19 personal remarks myself.

20 I'm Bill Walsh. I'm a resident and I support
21 also part of the Harbor Association. There's a basic
22 premise that I'm very interested in and that is the
23 jobs. 11,000 jobs, even 1,000 jobs is enormous. As
24 we've seen in the pressure of the current economic
25 environment, the ability to build and improve our

1 infrastructure is critical from everybody's
2 perspective.

3 Certainly there are effects and those effects
4 need to be mitigated. Those effects need to be handled
5 by new technology, and cleaner technology, improved
6 fuels and all kinds of other things that are in the
7 process of development.

8 I firmly believe that we need to support the
9 growth of this bridge and this project should be
10 approved.

11 Thank you.

12 MR. HERNANDEZ: John LaCross, Dan Hoffman and
13 Elizabeth Warren.

14 MR. LA CROSS: My name is John LaCross. I
15 support alternative two. I'm glad to see this is good
16 because that's all inaudible) it's good for the Port of
17 Long Beach and Port of L.A., but I think you guys are
18 way off base with your estimates of the traffic
19 reduction.

20 And one gentleman said there hasn't been any
21 truck traffic on Willow so you're not going to reduce
22 any smog over there.

23 Also, somebody wants to get to the ICTF,
24 they're not going to take your expressway to come out
25 of the Port of Long Beach. They're going to come up

TR2

Page 18

Response to Comment TR2-3

The Traffic Study includes forecasts for the traffic flow for both the baseline (No Build) and each of the build alternatives for the year 2030. These traffic forecasts include each of the five new grade separated intersections on Alameda Street. These five grade separated intersections are Pacific Coast Highway (PCH), Sepulveda, 223rd St, Carson and Del Amo (see the Traffic Study, Exhibits 8a, 8b, 9a, 9b, 10a, and 10b on pages 24 through 29 for the No Build condition and Exhibits 15a, 15b, 16a, 16b, 17a, and 17b on pages 38 through 43 for Alternative 1). These forecasts include both projected through-flow and turning movement counts. In the Traffic Study, Tables 7, 8, and 9 (pages 45, 46, and 47) provide the resulting levels of service for the various portions of the intersections under both the No Build and Alternative 1 cases for the AM, Mid Day and PM peak traffic flow periods. These tables show an improvement in level of service (LOS) for most of the intersections under Alternative 1. In the year 2030, the Carson Street and Del Amo intersections are forecast to move smoothly with little or no interruption (LOS A and B). However, Alameda/223rd, Alameda/Sepulveda and Alameda/PCH are forecast to have the lowest levels of service. As a result of the evaluation process, configuration enhancements were proposed for two of these intersections. The intersection configuration changes are now a part of the scope of Alternative 1 and the level of service reported in the traffic study include these configuration changes. Turn lane pockets and lane stripping improvements are planned to improve the traffic movement at the Alameda/223rd intersection. A southbound connector ramp is planned for the Alameda/PCH intersection to eliminate the left-turn movement and improve traffic flow through the intersection. No improvements are proposed for this Alameda/Sepulveda intersection.

Page 31

1 710 Freeway, down Alameda, PCH and 103 and right on
2 down and go to the gate off Sepulveda.

3 And I think you're all wrong about something
4 (inaudible) Carson because if you ever try to get off
5 of Alameda Street to turn around on Sepulveda to get to
6 a warehouse on Carson, you've only got two lanes. One
7 that turns left and one that turns right.

8 Have you ever tried to get off there? Same
9 thing. Same thing at Carson. It's not easy. That's
10 why nobody is using it now. The only ones we need is
11 the one we have to use to get somewhere you want to go.
12 So I think you're way off base with your models and all
13 this other stuff.

14 And as for the eight homes that you're going
15 to retrofit with air filters and stuff like this, are
16 you also going to pay the utility bills for them
17 people? Because you need to pay their utility bills
18 for them, too, if you're going to do it.

19 If you're running the air filter and running
20 the air conditioner, that's definitely going to jack up
21 the bill. So you need to take care of those people a
22 little bit better than you're thinking.

23 You're way off base. And it's not going to
24 affect the flow of traffic. And as for your 44 TEUs,
25 I've attended a meeting where they said 47 million TEUs

Response to Comment TR2-4

ACTA’s decision to provide mitigation by retrofitting affected homes with HVAC would not include paying utility bills, operation, maintenance, or future replacements.

Response to Comment TR2-5

Please see Response to Comment OB14-6. Growth projections contained in the Final EIS/EIR are consistent with TRANSPLAN data.

Response to Comment TR2-6

Your support of the proposed project is acknowledged.

1 was the maximum.
 2 So you guys are way off base on a lot of your
 3 numbers. You need to sit down and build a real model
 4 that's going to work and use a real facility.
 5 Thank you.
 6 MR. HERNANDEZ: Dan Hoffman, Elizabeth Warren
 7 and Andrea Hricko.
 8 MR. HOFFMAN: Good evening.
 9 I'm Dan Hoffman. I'm with the Chamber of
 10 Commerce. We do support the replacement of the bridge.
 11 We think it's going to expand out public safety in
 12 addition to the expressway project.
 13 The first reason, of course, is the bridge
 14 that we have now is unsafe. We've seen what can happen
 15 with that just this last year in the mid west.
 16 We do believe in the study, but we'll look at
 17 it further, that it can improve the environment.
 18 (Inaudible) and some of that doesn't seem likely. If
 19 we can get traffic to move freely, if we can get trucks
 20 from stopping at railroad tracks, at lights, then
 21 there's obvious benefits to that.
 22 It's important that it creates jobs. And
 23 11,000 jobs in the current economy. Some of the things
 24 that are happening already is because people don't have
 25 jobs. It's is extremely critical, not to mention the

TR2
Page 20

Response to Comment TR2-7

Your support of the proposed project is acknowledged.

Page 33

1 taxes it provides.
TR2-6 ↑

2 But also for the residents, if it does indeed
3 gets the trucks off of the streets and lets our
TR2-7 ↓ 4 residents move around locally more efficiently, it
5 makes the Port of Los Angeles more competitive.

6 Some people would argue that that's not very
7 important. There are a lot of folks that believe jobs,
8 good-paying jobs and having a competitive port where
9 we're not going to lose business is pretty important to
10 our local economy and to our economy for Southern
11 California.

12 Thank you.

13 MR. HERNANDEZ: Thank you.

14 Elizabeth Warren.

15 MS. WARREN: I hope you can hear me.

16 On behalf of FuturePorts, I'm here to express
17 our support for the draft EIR/EIS Schuyler Heim Bridge
18 replacement and SR-47 project. This is a great step in
19 ensuring that our ports can efficiently manage the
20 mitigating environmental impacts.

21 The Alameda Corridor Transportation Authority
22 will mitigate the health risks below the AQMD standards
23 in the areas that have identified reasonable mitigation
24 measures for impacted homeowners.

25 After taking every measure to reduce air

1 emissions, this project represents an important step to
2 ensure green growth in the ports. And although, we may
3 be in a recession right now, there will be a recovery.
4 And there's no greater time than now to prepare for the
5 future.

6 Ports of L.A. and Long Beach are and always
7 will be major economic (inaudible) providing
8 approximately half a million jobs in the greater five
9 town region and more three million jobs annually. In
10 this project alone, we will incur 11,000 construction
11 jobs and \$47 million in state and local taxes.

12 So this is a very important issue right now.
13 We firmly believe that port growth is appropriate. The
14 accomodation in that growth is critical not only in
15 Southern California and the national economy but also
16 our air quality. This alternative presents an
17 important green growth issue to provide movement of
18 goods in the port resulting in emissions.

19 We also believe that replacing the Heim
20 Bridge with the newer safer fixed bridge is without
21 question the utmost importance.

22 The other additional benefits are also
23 critical to safety and efficiency. We believe that we
24 have some common goals that are important to reduce
25 efficiency thereby reducing emissions.

TR2

Page 22

Response to Comment TR2-8

Your support of the proposed project is acknowledged.

Page 35

1 [We will support forward your efforts to see
2 this project move forward. The proposed project
3 TR2-8 represents (inaudible). We are pleased to offer our
4 support.

5 MR. HERNANDEZ: Thank you.

6 Andrea Hricko, Alfred Carillo, Joan
7 Greenwood.

8 MS. HRICKO: My name is Andrea Hricko. I'm
9 with the University of Southern California. And I have
10 a number of concerns about the assumption, the traffic
11 estimates that the health risk assessment relies on.

12 I'm concerned about the failure to consider
13 the research finding, but I will submit those comments,
14 written comments.

15 The EIR, it has to include a summary of a lot
16 of the different kinds of research findings that are
17 (inaudible) are findings with regard to asthma
18 (inaudible), but I would like to focus on the traffic
19 data because that's what the health risk assessment
20 replied upon.

21 And why do they matter so much? Because the
22 public has to have the confidence that a new freeway
23 construction project is using accurate traffic data
24 because all of the health risks rely on that traffic
25 data. If the traffic data are wrong, then all of the

TR2
Page 23

Response to Comment TR2-9

Please see Response to Comment OB15-1.

Page 36

1 analysis are wrong. And we have a right to know
2 whether or not a project will increase risk with the
3 public health.

4 So I'm not taking a position, but I just
5 think that we don't know what's happening here because
6 I believe the traffic data have many serious faults
7 with them.

8 A quote from the UC Davis analysis for
9 Caltrans says "the level of traffic activity typically
10 is the most important variable in completing an air
11 quality assessment."

12 What if ACTA and California repeatedly stated
13 that from the (inaudible) divert truck traffic from the
14 local streets and reduce truck traffic on surface
15 streets. So what do they claim from saying that? I
16 actually was really convinced that there are going to
17 be fewer trucks on local streets and that that local
18 street by the schools were going to be cleaned up,
19 those trucks were going to go elsewhere.

20 But the reality is there's going to be more
21 traffic on the expressway and that traffic is going to
22 be everywhere. After it's built, there's going to be
23 twice as much truck traffic going today whether or not
24 we build the expressway.

25 And I asked Caltrans and ACTA about that and

TR2

Page 24

Response to Comment TR2-10

Please see Response to Comment OB14-6 and OB15-3. It was reasonable to assume expansion of the existing ICTF facility when the Traffic Study was completed.

Page 37

1 the answer was, "We never said that there would be
2 fewer trucks than there is today, just that there
3 wouldn't be as many in the local community and in the
4 future because some of those trucks are going to go on
5 the expressway."

6 So looking at one of the route that the
7 traffic is taking. Right now the ICTF really is just
8 full. It can't take anymore trucks. And yet there are
9 11,000 trucks shown going into ICTF in 2030, where it
10 can only handle a little over 5,000 trucks. Those
11 trucks should be placed on the expressway. And if they
12 are placed on the expressway -- I just can't do this in
13 three minutes.

14 Right now the ICTF is full, can't handle
15 anymore trucks unless it expands, but the traffic map
16 show that in 2030, there's going to be twice as many
17 trucks on the 103 Freeway as now. They're going to be
18 going on their way to a full rail yard that can't
19 handle them.

20 If you notice, there are currently 5,581
21 trucks right now coming off the Terminal Island up to
22 Willow going into ICTF. In 2030, whether you build
23 this project or not, there's going to be 11,000 trucks
24 if you don't build it, and 9,800 trucks if you do build
25 it, going to an ICTF that can only handle 5,581 trucks.

TR2

Page 25

Response to Comment TR2-11

The Health Risk Assessment (HRA) does account for container movement that will be handled by the proposed SCIG and ICTF expansion projects.

Please see Response to Comment OB14-6.

Response to Comment TR2-12

Please see Response to Comments OB14-6 and OB15-3. The Traffic Study made reasonable assumptions about growth and trip distribution that were consistent with the data available at the time it was commissioned.

Page 38

1 So they're either going to be circling or
2 stacking or doing something over there what those 6,000
3 shouldn't be doing. But clearly, these 11,000 trucks
4 are not going to be going up the 103 Freeway when a new
5 expressway has been built.

6 And my concern is, if you put those 11,000
7 trucks onto the expressway and you put the 11,000
8 similar trucks that are going to be going to SCIG that
9 go on the expressway, then you have 22,000 more trucks
10 that are estimated in the health risk assessment.

11 And that dramatically would change the health
12 risk assessment figures. And even though you don't go
13 to the SCIGs, if you look at these 11,000 trucks that
14 are currently in the traffic estimate and recognize
15 that if they -- the theory is they have to go
16 someplace.

17 And so the traffic engineers are showing them
18 on their old routes that says we're assuming they're
19 just going to take the route they've always been
20 taking. Right now they go up to the 103 ICTF. Twice
21 as many trucks are going up to the 103 to the ICTF. It
22 doesn't make any sense.

23 And those trucks are clearly not going to be
24 (inaudible) because they have no where to go. They're
25 going to be using the expressway. And that completely

TR2

Page 26

Response to Comment TR2-13

See Response to Comment OB14-6. The traffic study projects increases in traffic on Alameda Street as well as SR-103. The routes that would be taken to the ICTF are based on current traffic patterns. If those patterns are changed as a result of conditions imposed during review and approval of the proposed ICTF project, the impacts of those changes would be considered as part of that project. Neither Caltrans nor ACTA have the authority to dictate the route used by trucks traveling to the ICTF.

Please also see Response to Comments OB15-3, and OB15-12.

Page 39

1 changes the assumption in the health risk assessment.
 TR2-12 2 So what does it mean falsely claiming that
 3 (inaudible) are going to be taking their regular old
 4 route will decrease the number, the number of trucks in
 TR2-13 5 the expressway which decrease the cancer risk. And if
 6 we show an accurate and larger number of trucks in the
 7 expressway, first of all, you have to redo the HRA the
 8 diesel (inaudible) along the expressway with all those
 9 additional trucks.

10 I would also just like to say that with
 11 regard to the SCIG, there are things that Caltrans told
 12 me about the way the numbers are calculated that also
 13 don't make any sense. ACTA says that the 103 trucks to
 14 get to SCIG would go up to 103, that that is its direct
 15 route. And the city council has a resolution that says
 16 it's a great idea, this SR-47, because it's going to be
 17 a new way to get to the near-dock railway facilities,
 18 plural. So there are also inconsistencies there.

19 In other words, the city council says the
 20 major purpose of this expressway is to carry trucks to
 21 the near-dock rail yard and if these trucks traveled on
 22 the SR-47 to the SCIG, there would be 11,000 more going
 23 to the ICTF and 11,000 more going to the SCIG, which is
 24 20,000 more trucks.

25 I want to point out one error that I happened

TR2
Page 27

Response to Comment TR2-14

Please see Response to Comment OB14-6 and OB15-12.

1 to find -- I have to say that I spent my Christmas
 2 vacation with these documents. And one of the figures
 3 that I noticed, that I really didn't understand, in
 4 2003, we see -- here we are and here's the 103 and we
 5 turn right on PCH to the 710. We see 5,762 trucks
 6 between the 710 Freeway and the Terminal Island
 7 Freeway. It doesn't explain why there are 19,562
 8 trucks in that little stretch.

9 So I asked the traffic engineers how that
 10 could happen, where do they come from and where are
 11 these 19,000 trucks going because you don't see trucks
 12 going up the 710 and they're not going on the 103. And
 13 they said, "Gee, that's a mistake."

14 But if that's the only mistake that there is
 15 in the whole traffic analysis -- we've checked all of
 16 the numbers. And that mistake, you're testifying, is
 17 the only mistake in the entire thing.

18 So I would like to say that from my view
 19 point and I truly have spent a tremendous amount of
 20 time with it, I feel there can be no confidence in the
 21 current HRA, not because it wasn't done well. It was
 22 probably done very well. Or the analysis because the
 23 traffic data (inaudible) contains any reference
 24 assumption and multiple errors. I believe that the
 25 traffic data must be redone and peer reviewed by an

1 independent firm with the public able to see the
2 errors, and final results need to be shown to the
3 public.

4 And after the traffic data are redone, the
5 HRA and the analysis should be redone using the
6 corrected data.

7 I thank you very much for the extra time and
8 holding this public meeting.

9 Thank you.

10 MR. HERNANDEZ: Alfred Carrillo, Joan
11 Greenwood, David Petit.

12 MR. CARRILLO: My name is Alfred Carrillo. I
13 live at 1508 East Rubidoux Street. Beautiful
14 presentation. Congratulations.

15 My concern is the area between Rubidoux
16 Street all the way to Opt Street, the cross street of
17 Blend. I've lived in that area for about 60 years. I
18 have a congregation of a hundred ten, a hundred fifteen
19 members located in that block. I see that on Arm
20 Street, on Rubidoux Street, there are only eight houses
21 that are being affected. To me, that's a joke.

22 Like I said, I've been in Wilmington for
23 60 years, approximately. My concern is all those
24 houses in that area. I know by the time 70 years pass,
25 all that area is going to be such a dump.

TR2

Page 29

Response to Comment TR2-15

The HRA evaluated the project-associated health impacts in terms of increased cancer risk and acute and chronic health impacts (non-cancer health risks). All non-cancer health risk impacts were found to be less than significant (with hazard indexes less than the SCAQMD significance level of 1.0). The cancer risk is considered significant if the incremental cancer risk increase between the No Build scenario and the proposed project is greater than 10 in a million. The increased cancer risk was calculated for residences, commercial workers, recreational users and workers, and students and school workers. For Alternative 1, all impacts were found to be less than significant, except at a limited number of residential receptors. The incremental cancer risk increases at schools in the study area were all less than 10 in a million. Therefore, none of the schools mentioned by the commenter were found to have a significant health risk.

It is highly unlikely that more homes in the study area would have a risk higher than 10 in a million because of the conservative methodology employed. For further discussion on this issue please see Response to Comment AJ11-7 and OB14-7.

Page 42

1 The east side of Wilmington is getting all
2 the junkyards for L.A. city. To make directions to go
3 to my house, you have to tell them the names of every
4 junkyard, every railroad crossing and every refinery.

5 I don't know where everybody else lives, but
6 I just want you to know that to my understanding -- I'm
7 not a scientist, I'm not a doctor, but I'm no dummy --
8 those eight houses are going to be affected according
9 to a computer.

TR2-15

10 What about the other side of the street?
11 What about the children that play outside in the
12 streets of Rubidoux, Grant Street and Opt. We have an
13 elementary school on Blend, Wilmington Park Elementary
14 School. I don't know if there's anyone here from LA
15 school district present, but that's a shame. They're
16 going to be affected because they see the wind factor.

17 No air conditioner is going to stop any type
18 of air pollution. As long as the people live 24/7 in
19 their house, but if they walk outside. And we're not
20 going to tell our children, "You can't play on that
21 side of the street because the wind is going to blow
22 and you're going to get cancer. You're going to get
23 asthma."

24 If you would -- more than four years ago,
25 they had a study of around where we live and people

1 have died of heart attacks, people died of diseases.
2 And I know that once they build that expressway, people
3 are going to be affected with that air pollution.

4 I know. I've lived there. I've seen things
5 happening and I know that even in our school, we have a
6 private school on that same block. It's a small
7 school, but I want you to know that what came out of
8 that school, we have produced people in the medical
9 field, young soldiers that have been in Somalia, they
10 have three tours of Iraq, another one went to
11 Afghanistan. There have been doctors that came out of
12 that school, people going to college from that school.
13 It's a small school, but I want you to know that they
14 go out and play, they go out and exercise, they use
15 Green Belt Park.

16 And when we go out there, there's other
17 people there. And if you would walk out in the
18 evening, you see children, young kids playing outside,
19 basketball. They can't go to another park because if
20 they go to another park, there's about three gangs on
21 L Street.

22 So we have a community. We don't need more
23 pollution. We don't need it.

24 And that's all I have to say. Either buy us
25 out or don't do nothing.

TR2
Page 31

Response to Comment TR2-16

Your support for Alternative 1 is acknowledged.

Response to Comment TR2-17

See Response to Comment TR2-15. The commenter is correct that the original purpose of risk assessments was to compare relative risk of one alternative from another and for comparing the potential risks to target levels to determine the level of mitigation needed. ACTA's Board has proposed to mitigate the impacts identified by the HRA as potentially significant even though the results of the HRA are considered to be extremely conservative.

For further discussion of the conservative methodology employed please see Response to Comment AJ11-7 and OB14-7.

1 MR. HERNANDEZ: We have many more that want
2 to speak.

3 MS. GREENWOOD: My name is Joan Greenwood.
4 I'm with the Wrigley District of Long Beach
5 (inaudible).

6 My purpose in speaking tonight, really, is to
7 address our preference for alternative one and also to
8 address this handout that I found on the chair
9 regarding Caltrans perspective on the health risk
10 assessment.

11 I have trained as an analytic (inaudible) and
12 environmentalist and I'm familiar with health risks.
13 We run many health risk assessments in our office. I
14 think the problem that we see this evening is people
15 trying to make health risk assessments into something
16 it isn't.

17 It is indeed a very simple model for doing a
18 very simple task if you read the original documents
19 from the 1980s. The point in doing more health risk
20 assessment isn't going to get us any further to solving
21 problems. It is a valuable tool for ranking
22 alternatives.

23 There is far too much uncertainty in the
24 model itself to be used for any other purpose. If we
25 constantly come to public meetings where a (inaudible)

TR2

Page 32

Response to Comment TR2-18

Caltrans has no authority to regulate the emissions of the mobile sources that will utilize the proposed projects. The emissions attributed to the proposed project would come from cars and trucks that would use the expressway and the direct control of vehicular emissions is within the jurisdiction of other agencies.

Motor vehicle emissions are a significant source of pollution in the South Coast Air Basin and their continued control is required to meet the state and federal ambient air quality standards. As discussed in Response to Comment AJ17-2 there are several federal state and local measures that will contribute to improved air quality in future years, thereby reducing the possibility that persons will be exposed to pollutant concentrations that would result in negative health impacts.

Page 45

1 simply getting the result out of the model, go to the
2 (inaudible) and present this health risk as being
3 something more than it is.

TR2-17

4 Yes, the assumptions in this model are very
5 conservative. The reason for that is we are protecting
6 the most sensitive receptors, the very young and the
7 very old. This is, again, for ranking purposes only.

8 The point is a person can become extremely
9 ill from asthma or can develop a cancer from one single
10 exposure. So the point is, yes, I concur that
11 alternative one is viable. The project should be done,

12 but, again, we come into mitigation, it's pretty much
13 too little, too late.

14 And if you evaluate the value of your
15 property, the homeowners, regardless of where you get
16 it, it's better that you have eight than apparently a
17 hundred and fifty.

18 The point is we can't whitewash this forever.
19 There are problems associated with the logistics
20 movement. And many of the money do not come back to
21 the community.

22 The \$47 million in state taxes that were
23 going to come out of these projects, again we already
24 know in the city of Long Beach we have a deficit. We
25 spend a hundred fifty million dollars a year in

Response to Comment TR2-19

The commenter is correct that there are more than eight homes on Rubidoux Street. The other homes are located farther away from the proposed project and their risk was determined to be less than significant. For further discussion on the conservative methodology and results contained in the HRA, please see Response to Comment AJ11-7 and OB14-7.

1 (inaudible) come back to help the residents of Long
2 Beach.

3 Nobody has ever come up with a figure, but we
4 also know that we send more tax dollars to Washington
5 than ever come back to help Long Beach. So, again,
6 spending more money on health risk assessment isn't
7 going to help. We got to start looking at that for
8 what it is.

9 So thank you for doing this, Mr. Hernandez.

10 MR. HERNANDEZ: Dave Petit, Marie Castle,
11 Alex Shute.

12 MR. PETIT: I'd like to say, first off,
13 (inaudible) but we have problems with the proposal for
14 SR-47. I'd like to (inaudible) about the health risk
15 assessment and I want to talk about (inaudible).

16 Jesse gave me a photograph that includes
17 Rubidoux Street where the eight houses are that you say
18 are affected (inaudible). By my count, there are about
19 230 homes in that street.

20 I totally agree with the last speaker, the
21 health risk assessment is way too blunt to be able to
22 say that by that number, even if I draw an imaginary
23 line, and you can say that the house next door is still
24 safe, that it doesn't need any of this equipment, but
25 the house farther down the (inaudible) that's not

TR2-19

TR2

Page 34

Response to Comment TR2-20

Property values are unlikely to decline due to the proposed project. The project would be located in a heavily industrialized area where residences are impacted by local commercial and industrial operations and traffic. The proposed project would improve air quality in the study area by reducing emissions due to traffic idling by-passing five at-grade rail crossings and three intersections. The project would also reduce traffic on the I-110 and I-710 over levels that would otherwise occur if the project is not built. Referring to the SCAQMD's MATES III study, existing air-quality related residential risk in the South Coast Air Basin is approximately 1200 excess cancer risks per million people exposed, and existing risk near the ports ranges from about 1100 to 3700 in million. In 2003, using the methodology in the HRA, the health risk attributed to vehicles using the SR-47 is estimated at approximately 356 to 630 in a million in Dominguez, Lincoln Village, Long Beach, and Wilmington communities. By the time the project is scheduled to begin operation in approximately 2015, the baseline risk in these communities (assuming no project) is predicted to be 39.7 to 87.8 in a million. The risks of 2015 Emissions Scenario is presented below in Table TR2-1. This table is a variation on Table 3.13-17 of the SDEIS/RDEIR, p. 3.13-53. The 2003 baseline has been added for comparative purposes. Thus, in 2015 risk from port-related traffic would be reduced by over 90 percent from the existing condition due to the benefits of already adopted regulatory programs to reduce vehicular emissions, such as the CARB fleet rule and the Clean Truck Program. With the project, the excess risk (difference between the proposed project and the No Build scenario) at the maximally impacted homes would be slightly over the 10 in a million threshold but it would still be approximately 90 percent lower than the risk level in 2003. ACTA proposes to install HVAC systems on the impacted homes. HVAC systems are conservatively estimated to reduce particulate emissions by 90 percent, which would reduce excess risk at all impacted residences to less than the 10 in a million threshold (SDEIS/RDEIR, Appendix A, *Human Health Risk Assessment for the Schuyler-Heim Bridge Replacement and SR-47 Expressway Project*, p. 53).

34

May 2009

Page 47

1 science. That's just making stuff up.
 2 That (inaudible) in terms of their health or
 3 one family or another in terms of the property value of
 4 their homes. This project is going to depress property
 5 values throughout the area, open up the agency and I
 6 hope you folks (inaudible) when you're budgeting what
 7 this thing is doing.

8 I asked your consultant what is the degree of
 9 carcinogens in the health risk assessment. She said,
 10 "Well, it's very conservative." That's not an answer.
 11 That's not an answer because if she were on the witness
 12 stand and I were examining her -- I've been a lawyer
 13 for 33 years -- I wouldn't take that and I don't think
 14 the judge would either.

15 You either have to have a confidence interval
 16 or you don't. If you don't have a confidence interval,
 17 that's good to know. Then when you say this house is
 18 going to experience ten in a million, this is going to
 19 experience nine, how confident are we? That's a real
 20 distinction. If we're not confident, what we need to
 21 do is you help everyone and you don't pretend that this
 22 model one house (inaudible) and another in terms of the
 23 risk.

24 Let me talk now for a minute about the
 25 traffic assumptions that went into this. Let me give

Table TR2-1 Summary of Cancer Risks

TR2

Page 36

Response to Comment TR2-21

State law required the Office of Environmental Health Hazard Assessment (OEHHA) to develop risk assessment guidelines to be used by state and local agencies in implementing the Air Toxic Hot Spots program (Health and Safety Code, Section 44300 et seq.). In association with that task, OEHHA has developed methodology for assessing cancer health risks. CARB both utilizes and recommends OEHHA guidance for the evaluation of cancer health risk (see Health Risk Assessment for the UP Intermodal Container Transfer Facility (ICTF) and Dolores Railyards [CARB, 2008]). Because OEHHA acknowledges that there is a great deal of uncertainty associated with the health risk assessment process, assumptions are designed to be conservative, in order to avoid underestimation of risk to the public (The Air Toxics Hot Sots Program Guidance Manual for Preparation of Health Risk Assessments, pp. 1-4 and 1-5 [OEHHA, 2003]). For these reasons, health risk assessment conclusions about the potential for significant health risk impacts at residences in the vicinity of the project err on the side of caution. They overstate the additional cancer risk and over-extend the impact zone boundaries.

Please also see Response to Comment AJ11-7 and OB14-7, which further explain the HRA's conservative methodology.

TR2

Page 37

Response to Comment TR2-22

In November 2007, a question was asked by the commenter as to how to convert the peak hour volumes shown in the Traffic Study of the DEIR/DEIS to AADT. The traffic consultant responded that a "rule of thumb" (approximate) conversion factor was to multiply the peak hour traffic by 10. This factor varies widely depending on the nature and composition of the traffic. For example, where there is no real peaking the multiplier can theoretically be as high as 24 – in other words the traffic every hour is the same. In the case of traffic near the Ports, truck trips are spread more uniformly over periods of time resulting in a factor of greater than 10.

The actual computation of AADT by the model does not involve a "rule of thumb" multiplier, but a dispersion of daily traffic across four periods totaling 24 hours. It then derives peak our traffic by interpolation methods. The AADT numbers in the diagrams are more accurate than the multiplier approximation results cited in the comment.

Response to Comment TR2-23

The SR-103 truck trips are determined by the model, which assigns routes to trucks based on the shortest trip time.

Trucks originating in the POLB to the ICTF (about 35 percent) use the I-710 to PCH to SR-103, or port surface roads to Anaheim Street to SR-103. These trucks do not use the Schuyler Heim Bridge now and would not use the Expressway.

Trucks originating in the POLA West Basin to the ICTF (about 10 percent) use Harry Bridges Road to Alameda Street to Sepulveda Boulevard. These trucks also do not use the Heim Bridge now and would not use the Expressway.

Page 48

1 you two examples.

2 As you know, there was a traffic study and
3 there's a new one for the health risk assessment. The
4 first study, it estimated current traffic over the
5 bridge at (inaudible) based on the same, the same
6 modeling (inaudible).

7 Why? So I asked your consultant and he said,
8 "Well, the new numbers are daily numbers and the old
9 numbers was peak hours." So what's right? Because the
10 old numbers (inaudible).

11 So that's where the numbers come from. So
12 now they're changing the 64 percent to 43 percent.
13 That tells me that these numbers are flaky when human
14 health is involved.

15 Let me give you another example. We heard a
16 gentleman say today that in assessing the potential
17 build out of SCIG (inaudible) routes as being used.
18 When I submitted some written comments and they gave me
19 some comments back, this is one of the points raised.

20 I want to read to you what Caltrans' answer was. They
21 said, "Regarding our CTS, the traffic model for SR-47
22 is" (inaudible) about 10,000 (inaudible).

23 Now 90 percent of these trips were assigned
24 for analysis to SR-103. That's not a balance. That's
25 not balanced at all. They put 90 percent of the trucks

TR2

Page 38

Trucks originating on Terminal Island to the ICTF (about 55 percent) use the Schuyler Heim Bridge to SR-103. These trucks would likely not use the Expressway rather than the SR-103 unless the ICTF Modernization Project moves forward. That project includes a new gate on Alameda Street and no left turns from the exit gate on Sepulveda Boulevard. That modernization may attract many of the SR-103 truck trips to the Expressway. As discussed in Response to Comment OB14-6, potential impacts resulting from newly proposed elements of the ICTF expansion project will be analyzed as part of the environmental review process for that project.

Response to Comment TR2-24

Please see Response to Comment OB14-6 and OB15-3.

The Final EIS/EIR made reasonable assumptions about future trip distribution. To the extent the ICTF Modernization and/or SCIG projects will result in alternative trip distribution patterns, those patterns will be analyzed as part of the environmental review process for those projects.

Response to Comment TR2-25

Please see Response to Comment TR2-24.

Response to Comment TR2-26

As discussed in TR2-21, the HRA conclusions about the potential for significant impacts at residences in the vicinity of the proposed project err on the side of caution. They overstate the additional cancer risk and over-extend the impact zone boundaries. For this reason, the list of homes with the potential to be impacted by the proposed project is likely over- rather than under-inclusive. Moreover, if the 2003 baseline were utilized to assess potential health risks, the analysis would have concluded that no significant health risk impacts would result from the project. Please see Response to Comment AJ11-7 and OB14-7 for further discussion of the HRA's conservative methodology.

Page 49

1 went up the 103. So I think what the gentleman said is
2 just not true. And then Caltrans said (inaudible) the
3 proposed SR-47 project would be moving about 9,000
4 trips (inaudible). Therefore, the traffic estimate
5 requires no adjustment.

6 The problem with that is the 9,000 trips
7 moving from the SR-103 to the new SR-47, the health
8 risk analysis does not account for that.

9 And so even (inaudible) the Caltrans
10 assumption, it's phoney. It's phoney because it
11 doesn't take into account what the ICTF components
12 believe to be true for the ICTF expansion.

13 They assume that the SR-47 Freeway will be
14 built. They think it's going to be built. And I think
15 this model would consider both the even distribution of
16 traffic, as the gentleman said earlier, which it didn't
17 do, and then a realistic estimate of traffic going up
18 the 47 and not the 103.

19 So I think -- I want to add to what Andrea
20 said. The traffic numbers (inaudible) they make the
21 health risk assessment unreliable. (Inaudible)
22 distinction between a house here and a house next door
23 in terms of health.

24 Thank you.

25 MR. HERNANDEZ: Thank you.

TR2

Page 39

Response to Comment TR2-27

Since the Port of Long Beach reconstructed this intersection, the level of service has improved. However, the traffic study analysis determined that it will still operate at a poor level of service in the future based on Port growth.

Response to Comment TR2-28

Federal regulations concerning marine navigation are implemented by the U.S. Coast Guard (USCG) and the U.S. Army Corp of Engineers (ACOE). During preparation of the EIS/EIR, both the USCG and ACOE were consulted, and as a condition of the bridge permit, the USCG required consultation with both Ports, and the local mariners who use the Cerritos Channel. The agreed upon 47-foot vertical clearance permits the largest Port fireboats to pass through Cerritos Channel.

Section 3.4, Utilities and Public Services, of the Final EIS/EIR provides an analysis of potential impacts from both construction and operations. The conclusion is that average emergency response time for both land and water based operations would not be affected by the proposed project. Please see Public Services page 3.4-27 of the Final EIS/EIR for further discussion.

Air emissions associated with the detours of marine vessels were considered and appropriate mitigation measures were applied to help offset the emissions. Please see AQ-9, the Heavy Duty Truck Buy Back Program, in Section 3.13.4.2 of the Final EIS/EIR.

Page 50

1 Marie Castle.

2 Marie, you indicated you wanted to speak

3 last. Do you want to speak now?

4 MS. CASTLE: First off, John had asked a
5 question (inaudible) is fraud. They said Ocean and 47,
6 this has a lot of congestion. Since they redid it,
7 there's no congestion (inaudible) which is only two
8 lanes of traffic (inaudible) have to go through.

9 And my bridge (inaudible) your restricted
10 disaster in the harbor a lot of the tugs wouldn't be
11 able to. A lot of them have firefighters capability so
12 the 47-foot bridge doesn't do them any good. Extra
13 pollution of tugs and barges and a larger strain on the
14 outer harbor as far as more congestion, more accidents
15 and also gets quite rough.

16 Christmas evening, my coworker had mistakenly
17 said we didn't have a close period and (inaudible)
18 coming through (inaudible) oh, it was open because they
19 had to come through because it was so rough and they
20 had to load the barges. Who knows what would have
21 happened then.

22 There's so many things that are fraud
23 (inaudible) the bridge, the only time it's been
24 painted. Numerous times. And they did a crappy job
25 then. All these years it's been flaking off. I told

TR2
Page 40

Response to Comment TR2-29

Your support of Alternative 1 is acknowledged.

Page 51

1 them how many years ago. I saw it on a cable. They
2 had a paint that was specially (inaudible) of buildings
3 and make it not flake off.

4 We had a new control room, new deck. We
5 don't have (inaudible) that needs a new roadway since
6 Caltrans acquired it in '75. Like I said, the harbor,
7 the tugs and barges, they need the bridge as a working
8 bridge. I guess the only one tug captain with pressure
9 (inaudible) a lot of them don't even know about these
10 meetings because they work ten on and ten off. A lot
11 of them don't read the newspaper.

12 You said it's not really (inaudible). A lot
13 turn left on Anaheim and turn left again on Alameda.
14 You make Henry Ford five blocks. That's crazy. And
15 you wouldn't be changing anything on the bridge.

16 MR. HERNANDEZ: Thank you, Marie, for your
17 comments.

18 Alex Shute, Elana Rodriguez, Alena Greer.
19 Alex.

20 MR. SHUTE: Hi, my name is Alex Shute. I
21 work for the Chamber of Commerce. (Inaudible) in
22 Los Angeles representing 800,000 employees.

23 Chamber supports investing the infrastructure
24 that will (inaudible) goods to our communities
25 throughout the United States and right here in Southern

1 California.

2 We support alternative one for this bridge

3 because of the safety and reliability. Reduction of

TR2-29

4 trucks on the street and safety (inaudible). The

5 Chamber does strongly support (inaudible) ACTA and

6 Caltrans mitigate local community impacts as discussed

7 in the HRA.

8 Additionally, (inaudible) expects the

9 Los Angeles County to (inaudible) jobs and it's vital

10 that the project continues.

11 Thank you.

12 MR. HERNANDEZ: Elana Rodriguez will be

13 speaking in Spanish and will be interpreted in English

14 by our interpreter for all the rest.

15 MS. RODRIGUEZ: Good evening.

16 My name is Elana Rodriguez. And I'm coming

17 from the Alliance for Children with Asthma. And I'm

18 also a resident of Long Beach, an area that's going to

19 be affected.

20 A group of mothers in my area, we do several

21 activities protecting the environment. We have been

22 doing some counting on traffic. And we realized we

23 counted 500 trucks with heavy loads per hour. They go

24 by Cabrillo School that presently has over 4500

25 students. Hudson School that has over 1500 students.

TR2

Page 42

Response to Comment TR2-30

The HRA evaluated the risk to children in the project area. It considered exposure to project-associated motor vehicle emissions for several exposure scenarios and used assumptions to estimate the risk to children based on CARB's Interim Policy for Inhalation-Based Residential Cancer Risk (CARB, 2003) (HRA p. 31). Residential exposure duration was assumed to be 24 hours per day, 350 days per year over 70 years. Risks were also estimated for students attending schools in the study area and for recreational users. For Alternative 1, the preferred alternative, cancer risk increases for students in the study area were less than the SCAQMD significance level of 10 in a million (See Table TR2-1). Results are shown for Cabrillo High School. All other schools have less than significant risk. All residential impacts were less than the significance level with the exception of limited number of homes. If the proposed project is approved, ACTA has offered to install HVAC systems on the homes with significant impacts. HVAC systems are estimated to be 90 percent effective in removing particulate matter, which would reduce risk to less than the significance level as well as reducing baseline risk substantially at these locations (HRA, p. 53). Noise impacts were addressed in the Draft EIS/EIR, Section 3.14, and found to be less than significant with mitigation.

Response to Comment TR2-31

Please see Response to Comment TR2-20 and OB14-11.

In addition, other efforts would be made to minimize impacts and engage the community.

Referring to the SCAQMD's MATES III study, existing air-quality related residential risk in the project area ranges from 1300 to 1800 excess cancer risks per million people exposed. In 2003, the baseline health risk (assuming no project) for the SR-47 without improvements is 356 in a million. By the time the project is scheduled to begin

Page 53

1 And Hudson Park where I personally go to exercise,
2 where there are many children that are playing their
3 favorite sports. Not only weekdays, but also weekends.

4 [So my question is, with all these projects,
5 TR2-30 how are these projects going to affect our children?
6 With more pollution and more noise? I think that's
7 impossible to tell our children, "Go learn, but please
8 do not breathe."

9 [Also another question that I have is inside
10 TR2-31 one of the houses in the affected areas. Right now
11 with the valuation of housing, how low can my property
12 go with these projects?

13 Lastly, all along my life, I've seen how they
14 build these highways and expressways. And in a short
15 time, there were -- anyway, be a lot of traffic, heavy
16 traffic. Since speaking, I have not seen any positive
17 changes.

18 Thank you.

19 MR. HERNANDEZ: Alena Greer.

20 Please be aware of the three-minute rule.

21 MS. GREER: My name is Alena Greer. I'm with
22 the group Children with Asthma. I really appreciate
23 ACTA holding this meeting and I think there's been some
24 really incredible information that's come forward to
25 the community members about the project itself and the

TR2

Page 43

operation in approximately 2015, the baseline risk in the project area (assuming no project) is predicted to be 39.7 in a million (see Table TR2-1). Thus, risk from port-related traffic would be substantially less than current levels due to the benefits of the various regulatory efforts to reduce vehicular emissions such as the CARB fleet rule and the Clean Truck Program. With the project, the excess risk (difference between the proposed project and the No-Build scenario) at the most impacted homes would add slightly over 10 in a million to the risk at that time. ACTA has proposed to install HVAC systems on the impacted homes. HVAC systems are conservatively estimated to reduce particulate emissions by 90 percent, which would reduce excess risk at the impacted homes to less than 10 in a million (see HRA, pg 53). In homes with existing HVAC systems, the weatherization process and replacement with increased efficiency HVAC units would lower energy costs for these residents.

Response to Comment TR2-32

Please see Response to Comments OB14-6, OB15-1, OB15-2, and OB15-3.

Response to Comment TR2-33

Your comment is noted. The purpose of the project is to ensure safe vehicular connection between Terminal Island and the mainland, reduce congestion, and provide a high-capacity limited-access route for traffic between Terminal Island and I-405. All reasonable and feasible alternatives were considered during project scoping and are addressed in Chapter 2 of the Draft and the Final EIS/EIR. Alternative 4 considered the option of replacing the bridge only. Section 2.2.1 of the Final EIS/EIR states "Alternative 4 involves only replacement of the Schuyler Heim Bridge. Because it would not help address traffic congestion north of the bridge, it would not meet the project purpose and need. Therefore, Alternative 4 was not identified as a preferred alternative over Alternative 1."

Page 54

1 health risk assessment.

2 What is clear to me -- actually, I'm walking
3 away from this meeting with many more questions
4 answered, but what is very clear to me is this project
5 is set out to accommodate more truck traffic from the
6 port to the west Long Beach rail yard.

7 It seems like I keep hearing about pollution
8 from traffic from the ICTF and as part of the health
TR2-32 9 risk assessment and that's a grave concern to me.

10 In particular, (inaudible) traffic Terminal
11 Island Freeway and we know that Hudson School and
12 Cabrillo and west Long Beach is really ground zero for
13 (inaudible). The fact that this project would be
14 increasing traffic in an already heavily impacted area
15 is a particular concern.

16 What's also very confusing to me is why we're
17 not just dealing with the bridge's efficiency. I'm
18 anxious to hear a little bit about what the bridge
TR2-33 19 operator was saying. Why not just fix the bridge? Why
20 do we have to increase all this traffic on the streets
21 and this expressway and, of course, increase pollution
22 and then health impacts to local residents.

23 It seems to me that if we invested all the
TR2-34 24 time and effort needed to actually (inaudible)
25 meaningful alternative to building an expressway to

TR2

Page 44

Response to Comment TR2-34

Several projects have been approved or proposed that would increase the percentage of cargo loaded on trains using on-dock rail. However, due to space and logistic constraints it is not considered possible for all cargo to be loaded using on-dock rail and for that reason near-dock rail yards such as the SCIG, if adopted, and the ICTF would continue to be used. Near-dock rail is considered preferable to shipping containers lengthy distances by truck (*San Pedro Bay Ports Clean Air Action Plan Technical Report*, p. 137). Rail shipment reduces traffic congestion and reduces emission per container (*Id.* at p. 136).

Response to Comment TR2-35

The community would benefit from the proposed project because it would reduce traffic congestion and emissions as opposed to the No-Build scenario (Please see Response to Comment TR1-54). Historically public dollars have been used for transportation improvements that benefit both the traveling public and industry. Much of these public dollars come from state and federal fuel taxes that are paid by the public and industry. In the case of the Expressway, over half its funding would come specifically from industry assessed container fees, which is a new model for funding port-related infrastructure.

Response to Comment TR2-36

Non-cancer acute and chronic health risks were evaluated in the HRA. OEHHA has developed Reference Exposure Levels (RELs) to assess non-cancer health risks. RELs are developed from the best available data in the scientific literature and are concentrations at or below which no adverse health effects are anticipated in the most susceptible people. In other words, RELs are set at levels of exposure meant to ensure that the most sensitive individuals (e.g., children and the elderly) are protected from non-cancer health effects (*A Guide to Health Risk Assessment*, p. 10, OEHHA, 2001). To assess chronic

Page 55

1 release off-dock rail yard and rather invested time and
 2 energy into looking into the feasibility of on-dock
 3 railway, where we are putting the cargo directly from
 4 the ship onto the trains on port property and getting
 5 them out of the region where we're not getting
 6 (inaudible) neither Wilmington nor west Long Beach and
 7 having to choose whose lives or whose children's health
 8 is more important.

9 I just would like to ask a couple of
 10 questions. There was the potential positive things of
 11 the project for the community. Really what I saw was a
 12 positive benefit for the agency and people for it,
 13 specifically that public dollars would be able to
 14 provide better access to private businesses, rail yards
 15 and (inaudible).

16 So it seems to me that we're building these
 17 projects really not for community benefit rather to
 18 impact the community and allow for increase expansion.

19 And finally, it's important to know that we're only
 20 talking in the HRA about cancer risks. We're not
 21 talking about what impacts -- just basic to children
 22 for asthma, decrease lung function over their lifetime,
 23 decrease mortality and health impacts.

24 Thank you.

25 MR. HERNANDEZ: Thank you.

TR2

Page 45

and acute non-cancer exposures, annual and 1-hour TAC ground-level concentrations were compared to the RELs developed by OEHHA to obtain a chronic or acute hazard index. According to the most recent guidance published by OEHHA (OEHHA, 2003) a hazard index less than 1.0 indicates that the potential for non-cancer public health risks is less than significant.

The HRA concluded that there would be net decreases in the acute and chronic hazard indices for the project years 2015 and 2030 (as well as intermediate project years) compared to the baseline scenario for all receptors due to improvements in vehicle emissions controls. It also found that the potential for non-cancer health effects between the build and no-build alternatives was less than significant for all scenarios analyzed because the highest hazard index in the vicinity of the proposed project were estimated to be less than the 1.0 threshold (HRA, p. 36). This methodology is consistent with applicable guidance and analyses of non-cancer health impacts performed by agencies such as, OEHHA, CARB, and SCAQMD, which are responsible for the protection of human health.

The HRA relied on the currently adopted regulatory guidelines. The health values of diesel PM and other air toxics used in the HRA were those in the latest version of the HARP model, which embodies the latest approved health values for air toxics and the regulatory guidance from OEHHA.

Adverse impacts of diesel PM, such as cardiovascular and respiratory disease, are not specifically addressed by the OEHHA guideline or HARP model. However, it is generally accepted that PM concentrations lower than the REL can affect cardiovascular and respiratory systems. The Final EIS/EIR has been revised to indicate that the HI calculations for air toxics were based on acute and chronic non-cancer effects but do not explicitly include other effects such as cardiovascular and respiratory disease and deaths, exacerbation of asthma, or enhancement of allergic response.

TR2

Page 46

Response to Comment TR2-37

The furthest affected home is 557 ft from the elevated expressway. The isopleths for determining the boundary is calculated by comparing the difference between emission levels determined for the no build case and the specific alternative at the various grid locations (HRA; Figures 3-5, 3-6). Due to geometries, prevailing winds and physical topography, this line is not a fixed distance from the roadway alignment but instead varies in distance from one side of the alignment to the other or even along the alignment. Therefore universally applying this number to all locations is not valid. One of the conditions that affects the results in the Rubidoux area is that the Expressway is transitioning from an elevated structure to an at-grade facility in this vicinity.

Response to Comment TR2-38

As noted in the comment, studies have shown elevated risk within 500 feet of existing transportation corridors, particularly freeways. That is one of the reasons why ACTA decided to conduct an HRA and mitigate the risks to the levels below SCAQMD's significance level. The HRA used very conservative assumptions and the impact zones calculated are similarly very conservative, meaning that they overstate the additional cancer risk and over-extend the impact zone boundaries.

The cited California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) guidelines come out of advisory documents that provide suggested policies. The documents do not establish regulatory standards (see *Air Quality and Land Use Handbook: A Community Health Perspective*, p. 3 [CARB, 2005]; see also *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*, p. 1 [SCAQMD, 2005]). While both documents recommend that residences and other sensitive land uses be cited more than 500 feet from a freeway, they also recognize that land use

Page 56

1 Jesse Marquez.

2 MR. MARQUEZ: My name is Jesse Marquez. I'm
3 a lifelong Wilmington resident. I'm also a director of
4 the Coalition for a Safe Environment, which is in the
5 city of Wilmington. Our concern focuses on two things.
6 It's basically the amount of traffic that will be
7 passing through the expressway and the health impacts.

8 Now you've already mentioned that eight homes
9 have been targeted or identified to be the most
10 impacted. And one of the questions I want to know is,
11 **TR2-37** how many feet from the expressway is that farthest
12 home?

13 MR. HERNANDEZ: We're here tonight to take
14 comments. And I don't have an answer to any of these
15 questions. Those will all be placed in the responses
16 that we will provide.

17 MR. MARQUEZ: Our organization as part of our
18 (inaudible) we went to every street there along
19 Alameda, which was Rubidoux, L Street, Young Street,
20 Den Street and Opt Street. And we measured the
21 **TR2-38** distance from every house, fence line west of Alameda
22 and then we measured from the street Alameda.

23 Every one of those blocks, there are over 100
24 residential homes and units there, which interprets to
25 500 residents that live there, at a minimum. Every one

TR2
Page 47

decisions are not within the jurisdiction of either agency and; therefore, that recommendations in each respective document are not binding on agencies exercising land use authority (*Air Quality and Land Use Handbook: A Community Health Perspective*, supra, pp. 2 and 4.; see also *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*, supra, p. 1.) Accordingly, while a 500-foot guideline is suggested in both documents, Caltrans and FHWA have the authority to deviate from the suggested guideline.

Please see Response to Comment TR2-15.

Response to Comment TR2-39

The primary purpose of the project is freeway congestion relief by diverting certain traffic to the previously improved Alameda Street where tens of millions have been spent by local agencies to increase its capacity. The localized diversion, as stated in the Executive Summary of the Draft EIS/EIR, involves the existing surface street Henry Ford/ Alameda Street connection from the fully improved and widened Alameda Street north of PCH to the SR-103 ramps to Terminal Island. The new elevated structure would result in a 50 percent reduction in the trucks on Henry Ford Avenue that would otherwise use it if the proposed project is not built. It was never the intent nor is it reasonably possible to divert all the types of localized trips mentioned in the comment away from the area.

Response to Comment TR2-40

In terms of "fence-line" monitoring, it should be noted that the air dispersion modeling in the HRA used meteorological data collected at the Sts. Peter and Paul School, which is within the overall modeling domain, and approximately 0.3 mile outside the refined receptor region in Wilmington area.

A public health survey in the project area would not yield meaningful baseline information or information about potential project impacts because it would be impossible to separate project impacts from illnesses caused by natural processes or even general port-related impacts. Please see Response to Comment TR2-36.

Page 57

1 of them is less than 800 feet. So it's very important
 2 for us to know what is your zone that you've
 3 established there.
 4 Because if I look at the (inaudible) land use
 5 guideline. And if I look at the South Coast Air
 6 Quality Management land use guideline, both those
 7 documents which are supposed to be used by your
 8 agencies states that no project should be built within
 9 500 feet of a residence.
 10 Already right now, we have about 700
 11 residents that are living close to that mark right
 12 there alone.
 13 Our other question is, that in the traffic
 14 count, we don't believe they're accurate. Because you
 15 talk about diverting traffic from arterial streets.
 16 Well, how are you going to divert all the trucks that
 17 go to a container storage area? How are you going to
 18 divert the trucks that go to the off-port facilities?
 19 How are you going to divert the trucks that go to pick
 20 up their chassis at one of the yards? How are you
 21 going to divert the trucks that go fill up their trucks
 22 with diesel gas and those trucks that are getting
 23 maintenance and care? Where do they get counted into
 24 the numbers?
 25 (Inaudible) Why don't you have an air quality

1 test site fence line right there where the residents
2 live on Rubidoux or Young Street or Opt Street since
3 we're talking about human lives here. You're talking
4 about cancer. You're talking about cancer deaths.
5 What about asthma? You can have an acute asthma attack
6 and die. So where does that get counted?

7 There's probably about 30 other illnesses
8 where you can die but they're not cancer. So what was
9 it based on? Did you conduct a public health survey of
10 that target area? Did you go door to door and
11 interview these families? What are their existing
12 problems? You did not. Because if you did, then you
13 will establish a public base line and that base line
14 will tell you who has asthma, who has emphysema. You
15 would know those numbers.

16 Because if we're talking eight homes -- and I
17 happen to live next door, what if I have a
18 cardiopulmonary disease, does that mean I do not
19 qualify for any medication? Right now you have no clue
20 whatsoever. So we ask that you do conduct a public
21 health survey, you do conduct and establish a public
22 health base line in which to establish (inaudible)
23 because right now we're based on pure number that
24 doesn't exist here.

25 It's not reality and it's not based on the

Response to Comment TR2-41

According to the World Health Organization (WHO), a Health Impact Assessment (“HIA”) is “A combination of procedure, methods and tools by which a policy, program or project may be judged as to its potential effects on the health of a population, and the distribution of those effects within the population.” HIA recommendations are produced for decision makers and stakeholders, with the aim of maximizing a proposed project’s positive health effects and minimizing the negative health effects. In a letter dated January 28, 2009, the EPA stated that a port-wide health impact assessment may be “beyond the scope of any one Port project NEPA document” (Goforth, Kathleen; EPA; 2009; letter to U.S. Army Corps of Engineers; January 28.)

Because the Final EIS/EIR discloses environmental impacts, including health risk impacts, of the proposed project, an additional HIA is not required. Nonetheless, the Final EIS/EIR includes a number of health assessment tools including the HRA, criteria pollutant modeling, and Environmental Justice analysis that will assist the lead agency in comparing the benefits and costs among project alternatives.

Response to Comment TR2-42

Your support of the proposed project is acknowledged.

1 residents that live there. We also ask now that we
 2 know a little bit more about this and other impacts,
 3 that you conduct a health impact assessment. Both L.A.
 TR2-41 4 County Department of Health supports health impact
 5 assessments and the United States Department of Health
 6 supports health impact assessments and we request that
 7 you do that.

8 Thank you.

9 MR. HERNANDEZ: Thank you.

10 MR. KEMP: I'm Carl Kemp. I'm here on behalf
 11 of the city (inaudible) association. I wish to echo
 TR2-42 12 the comments by FuturePorts. We are applauding this
 13 project for its enhancement to efficiency.

14 Thank you.

15 MR. HERNANDEZ: Ray Park.

16 MR. PARK: Good evening. My name is Ray
 17 Park. I'm here tonight on behalf of the Dominguez
 18 Homeowners Association, which lies along the Alameda
 19 Corridor. I am just appalled as we keep hashing this
 20 over and hashing this over about people that are
 21 (inaudible).

22 For your information, the (inaudible) just
 23 presented the state a report listing that the Carson
 24 area has the highest rate of cancer death in Southern
 25 California. Long Beach was right behind.

TR2

Page 50

Response to Comment TR2-43

The traffic study and the HRA consider the impacts through the Dominguez area to SR-91. The results show virtually no additional significant cancer risk between the build and no-build conditions.

Response to Comment TR2-44

Table 3.5-14 of the Final EIS/EIR shows 14 ramp conditions with and without the project from PCH north to SR91. Three improve, nine stay the same and two are worse with the project. Improvements at impacted intersections are incorporated as an element of the proposed project for Alternatives 1 and 2.

Response to Comment TR2-45

The HRA estimated the potential health impacts for the Dominguez and Lincoln Village areas associated with the proposed project. The results are shown in Tables 3.13-17 and 3.13-19 of the SDEIS/RDEIR, pp. 3.13-53 and 56. The maximum cancer risk increases at residential areas are below the significance threshold for Alternatives 1 using the preferred emissions scenario, except for a small area in Lincoln Village. For any residence in the impacted area, ACTA has offered to install HVAC systems to reduce the risk to a level that is less than significant.

The potential for noise impacts as a result of the project was studied in the EIS/EIR (Final EIS/EIR, Section 3.14; Section 4.5.4). The EIS/EIR determined that with implementation of mitigation including noise barriers along the SR-47 Expressway and Alameda Street, potential operational noise impacts (including those resulting from truck noise) would be reduced to a less than significant level at all locations in the project study area except Anchorage Way Marinas where no mitigation is feasible (*Id.* at pp. 3.14-20 and 4-15).

Please see Response to Comment TR2-43.

Page 60

1 This mock up that you use says it goes right
 2 to P.C.H., but it's a funny thing, Mr. Goodwin said
 3 these trucks are going to go clear up in the 91
 4 Freeway, which is right through the Dominguez area.
 5 There's no mediation for filtration form. And the
 6 trains are bad enough. And now with the increase in
 7 traffic by diverting vehicles.
 8 And as far as the studies that you wrote,
 9 there was no mention of a freeway onramp, freeway
 10 transition ramps. Just like the young lady says,
 11 they're at Sepulveda and 103. It's locked. And trucks
 12 are like water. They're going to go to the least
 13 resistance, whether it's on Alameda. They're going to
 14 move their goods as fast as they can. This health risk
 15 assessment I feel is wrong because I too am a member of
 16 the I-710 project.
 17 (Inaudible) and air quality studies are
 18 significantly higher than what's severe. I think a lot
 19 more work has to be done on this. We're going to have
 20 to include areas. For your information, there are 2400
 21 homes in the Dominguez Lincoln Village area. That's
 22 over 10,000 people that are affected. We're also --
 23 have the Alameda Corridor on one side, the I-710
 24 Freeway on the other, the 405 to the south and the 91.
 25 We're impacted severely by air quality and truck noise.

1 I think that we've got to do some more
2 studying and we have to include people that are
3 affected, whether it's at the elementary schools in
4 Long Beach, the residents along the Alameda Corridor,
5 but something has to be done to ensure the safety of
6 the residents, not just four or five folks that you can
7 draw a line and no more fumes and air quality at this
8 point. It doesn't work.

9 Thank you very much.

10 MR. HERNANDEZ: Thank you very much.

11 Teresa Hurtado.

12 MS. HURTADO: Hello, I'm Teresa Hurtado. I'm
13 a registered dental (inaudible) and I'm getting my
14 Bachelor's in occupational science. I work full-time
15 and I go to school full-time at night. The only reason
16 that I looked at this flier was because I remember that
17 bridge, going through that bridge when we would go
18 visit my dad because he worked in Terminal Island.

19 Me, as a community member, we usually don't
20 have time to come to these meetings and listen to
21 everything (inaudible) and one thing and another, but
22 I'm really happy that I did look at this.

23 I am on 1500 block Rubidoux. This is crazy
24 to me how we have all this pollution that can be
25 happening, like premature deaths, asthma.

TR2

Page 52

Response to Comment TR2-46

It is highly unlikely that more homes in the study area would have a risk higher than 10 in a million. Please see Response to Comment AJ11-7 and OB14-7 for further discussion.

Response to Comment TR2-47

Your comment is noted. The option of only replacing the bridge was considered as Alternative 4.

Page 62

1 And my husband and I just recently decided to
2 have a baby this year. And I want the baby to go out
3 there and play and be fine. And I don't want them to
4 have any disability or any asthma that they need to
5 worry about it.

6 Within the last few years, we have a lot of
7 different constructions in Wilmington. We never had
8 any issues with allergies, but within the last five
9 years we've been having, both my husband and I, started
10 talking allergy pills and (inaudible) showing that's
11 what's going on in the air.

12 So I am really -- it's a really big concern
13 for me. We've lived in Wilmington -- well, myself
14 27 years since we were little. My parents live on
15 Maher, which is three or four blocks away from
16 Rubidoux. So when we're saying only Rubidoux is
17 affected. How's my mom going to be affected when she's
18 living three or four blocks? And that's Maher, they're
19 not even in consideration.

20 So I strongly oppose any of the building or
21 if this bridge is going to coming to town, maybe we
22 should address that bridge and not make this huge
23 freeway entrances where it's not needed.

24 I go down Alameda every single day to go to
25 work in Huntington Park. That's the easiest way. It's

1 usually packed, but Alameda and Anaheim, they don't
2 have a huge congestion. So I don't think truckers will
3 take these new routes on the 47 or whatever this new
4 route is going to be. It wouldn't be beneficial.

5 MR. HERNANDEZ: Thank you very much.

6 Thank you very much. That concludes our
7 portion of the public comments. There are still a few
8 cookies left. And I'd like to thank all of you for
9 attending this evening. Good night.

**MEMORANDUM OF AGREEMENT
BETWEEN THE CALIFORNIA DEPARTMENT OF TRANSPORTATION AND
THE CALIFORNIA STATE HISTORIC PRESERVATION OFFICER
REGARDING THE STATE ROUTE 47 (SR-47) EXPRESSWAY AND THE SCHUYLER HEIM
BRIDGE REPLACEMENT PROJECT, CITIES OF LONG BEACH AND LOS ANGELES, LOS
ANGELES COUNTY, CALIFORNIA**

WHEREAS, the Federal Highways Administration (FHWA) has assigned, and the California Department of Transportation (Caltrans) has assumed, FHWA responsibility for environmental review, consultation, and coordination under the provisions of the *Memorandum of Understanding (MOU) between the Federal Highway Administration and the California Department of Transportation Concerning the State of California's Participation in the Surface Transportation Project Delivery Pilot Program*, which became effective on July 1, 2007 and applies to this project; and

WHEREAS, Caltrans has determined that the State Route 47 (SR-47) Expressway and the Schuyler Heim Bridge Replacement Project (Undertaking), will have an adverse effect on the Schuyler Heim Bridge (#53-2618), a property determined to be eligible for inclusion in the National Register of Historic Places (National Register); and

WHEREAS, Caltrans has consulted with the California State Historic Preservation Officer (SHPO) pursuant to Stipulations X.C., and X.I. of the January 2004, *Programmatic Agreement among the Federal Highway Administration, the Advisory Council on Historic Preservation, the California State Historic Preservation Officer, and the California Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act, as it pertains to the Administration of the Federal-Aid Highway Program in California* (PA), and where the PA so directs, in accordance with 36 CFR Part 800, the regulations implementing Section 106 of the National Historic Preservation Act (16 USC Section 470f), as amended (NHPA), regarding the Undertaking's effects on historic properties and has notified the Advisory Council on Historic Preservation (ACHP) of the adverse effect finding pursuant to pursuant to 36 CFR § 800.6(a)(1); and

WHEREAS, Caltrans has thoroughly considered alternatives to the Undertaking, has determined that the statutory and regulatory constraints on the design of the Undertaking preclude the possibility of avoiding adverse effects to the historic property during the Undertaking's implementation , and has further determined that it will resolve adverse effects of the Undertaking on the subject historic property through the execution and implementation of this Memorandum of Agreement (MOA); and

WHEREAS, Caltrans District 7 (District 7) and the Alameda Corridor Transportation Authority (ACTA), have participated in the consultation process and have been invited to concur in this MOA; and

WHEREAS, For Alternatives 1, 1A, 2, 4, and 3, Caltrans shall ensure that the following stipulations are implemented; and

NOW, THEREFORE, Caltrans and the SHPO agree that, upon Caltrans' decision to proceed with the Undertaking, Caltrans shall ensure that the Undertaking is implemented in accordance with the following stipulations in order to take into account the effect of the Undertaking on historic properties, and further agrees that these stipulations shall govern the Undertaking and all of its parts until this MOA expires or is terminated.

STIPULATIONS

I. AREA OF POTENTIAL EFFECT

- A. The Undertaking's area of potential effects (APE) is depicted in Figures 4A and 4B of the September 2006 *Finding of Adverse Effect for the Commodore Schuyler Heim Bridge and SR-47 Project*. The APE includes the maximum existing or proposed right-of-way for all alternatives under consideration, easements (temporary and permanent), all improved properties subject to temporary or permanent changes in access (ingress and egress), and areas where visual or audible changes could occur outside the required right-of-way.
- B. If modifications to the Undertaking, subsequent to the execution of this MOA, necessitate the revision of the APE, Caltrans will consult with District 7 and the SHPO to facilitate mutual agreement on the subject revisions. If Caltrans, District 7, and the SHPO cannot reach such agreement, then the parties to this MOA shall resolve the dispute in accordance with Stipulation III. D. below. If Caltrans, District 7, and the SHPO reach mutual agreement on the proposed revisions, then Caltrans will submit a final map of the revisions, consistent with the requirements of stipulation VIII.A. and attachment 3 of the PA, no later than 30 days following such agreement.

II. TREATMENT OF HISTORIC PROPERTIES

- A. Caltrans shall offer the Schuyler Heim Bridge (Bridge) for sale for reuse in an alternate location to interested public agencies and non-profits. A marketing plan shall be prepared for the sale of the bridge, including: a notification letter, fact sheet, list of intended recipients, as well as provisions for the salvage of smaller components in the case that there is no interest in re-use of the bridge. Advertisements shall be placed in appropriate newspapers of record. The offer shall run for 6 months. If no acceptable bids are received after 6 months, this stipulation shall be deemed to have been met. The above shall be done in accordance with the U.S. Department of Transportation Historic Bridge Program 23 USC 144(o)(4)(A) and (B).
- B. Caltrans shall install informative permanent metal plaques at both ends of the new bridge at public locations that provide a brief history of the original Bridge, its engineering features and characteristics, the reasons for its demolition, and a statement of the characteristics of the replacement structure. SHPO shall have 30 days to review proposed plaque information before they are produced and installed.
- C. Caltrans shall, pursuant to Section 110(b) of the NHPA, before the Bridge is demolished, contact the National Park Service (NPS) Historic American Building Survey/Historic American Engineering Record (HABS/HAER) program to determine what level and kind of recordation is required for the property.

- D. Caltrans shall disseminate copies of the HABS/HAER report to local libraries. One acid-free xerographic copy of the report or reports shall be prepared on standard 8 ½ X 11 paper and provided to each repository to include the Los Angeles Public Library, the Long Beach Public Library, the Los Angeles Conservancy, the Caltrans Transportation Library in Sacramento, and the California Office of Historic Preservation.
- E. Caltrans shall prepare a website, or adapt its current website, or help the Port of Long Beach or Port of Los Angeles adapt its website to make the information from the HABS/HAER report available to the public for 10 years. The information will also be made available to the Caltrans Transportation Library in Sacramento for inclusion on their website.
- F. Caltrans shall produce a documentary (motion picture or video) that addresses the history of the Bridge, its importance and use within the history of the Port of Long Beach and Port of Los Angeles, and demonstrates its operation and function. The motion picture or video will be of broadcast quality, of sufficient length for a standard 30-minute time period and will be made available to local broadcast stations for public access channels in local cable systems and to schools/libraries; and one copy shall be submitted to the Caltrans Transportation Library in Sacramento.
- G. Caltrans shall prepare traveling exhibits that address the history of the Bridge, its importance and use within the history of the Port of Long Beach and the Port of Los Angeles, and demonstrate its operation and function, appropriate for display in small museums, or for use in schools.
- H. Caltrans shall offer artifacts removed from the Bridge during preliminary stages of the demolition process to local museums, and provide for their delivery to accepting institutions. Examples of such artifacts may include, but not be limited to, control panels, instruments, structural members, railings, signage, plaques or other identifying ornamentation, street lights, navigation lights, etc., unless such artifacts are subject to sale of the bridge under stipulation II. A.

III. ADMINISTRATIVE PROVISIONS

- A. Definitions. The definitions provided at 36 CFR § 800.16 are applicable throughout this MOA.
- B. Professional Qualifications and Standards. Caltrans will ensure that only individuals meeting the Secretary of the Interior's Professional Qualification Standards (48 FR 44738-39) in the relevant field of study carry out or review appropriateness and quality of the actions and products required by Stipulations II.A-H in this MOA.
- C. Discoveries and Unanticipated Effects. If Caltrans determines after the construction of the Undertaking has commenced, that the undertaking will affect a previously unidentified property that may be eligible for listing in the National Register, or affect a known historic property in an unanticipated

manner, Caltrans will address the discovery or unanticipated effect in accordance with 36 CFR § 800.13(b)(3). Caltrans at its discretion may hereunder assume any discovered property to be eligible for inclusion in the National Register in accordance with 36 CFR § 800.13 (c).

D. Resolving Objections

1. Should any party to this MOA object at any time in writing to the manner in which the terms of this MOA are implemented, to any action carried out or proposed with respect to implementation of the MOA, or to any document prepared in accordance with and subject to the terms of the MOA, Caltrans shall immediately notify the other parties of the objection, request their comments on the objection within 15 days following receipt of Caltrans' notification, and proceed to consult with the objecting party for no more than 30 days to resolve the objection. Caltrans will honor the request of the other parties to participate in the consultation and will take any comments provided by those parties into account.
2. If the objection is resolved during the 30-day consultation period, Caltrans may proceed with the disputed action in accordance with the terms of such resolution.
3. If at the end of the 30 day consultation period, Caltrans determines that the objection cannot be resolved through such consultation, then Caltrans shall forward all documentation relevant to the objection to the ACHP, including Caltrans' proposed response to the objection, with the expectation that the ACHP will, within thirty (30) days after receipt of such documentation:
 - a. Advise Caltrans that the ACHP concurs in Caltrans' proposed response to the objection, whereupon Caltrans will respond to the objection accordingly. The objection shall thereby be resolved; or
 - b. Provide Caltrans with recommendations, which Caltrans will take into account in reaching a final decision regarding its response to the objection. The objection shall thereby be resolved; or
 - c. Notify Caltrans that the objection will be referred for comment pursuant to 36 CFR § 800.7(c) and proceed to refer the objection and comment. Caltrans shall take the resulting comments into account in accordance with 36 CFR § 800.7(c)(4) and Section 110(1) of the NHPA. The objection shall thereby be resolved.
4. Should the ACHP not exercise one of the above options within 30 days after receipt of all pertinent documentation, Caltrans may assume the ACHP's concurrence in its proposed response to the

objection and proceed to implement that response. The objection shall thereby be resolved.

5. Caltrans shall take into account any of the ACHP's recommendations or comments provided in accordance with this stipulation with reference only to the subject of the objection. Caltrans' responsibility to carry out all other actions under this MOA that are not the subject of the objection shall remain unchanged.
 6. At any time during implementation of the measures stipulated in this MOA, should a member of the public raise an objection in writing pertaining to such implementation to any signatory party to this MOA, that signatory party shall immediately notify Caltrans. Caltrans shall immediately notify the other signatory parties in writing of the objection. Any signatory party may choose to comment in writing on the objection to Caltrans. Caltrans shall establish a reasonable time frame for this comment period. Caltrans shall consider the objection, and in reaching its decision, Caltrans will take all comments from the other signatory parties into account. Within 15 days following closure of the comment period, Caltrans will render a decision regarding the objection and respond to the objecting party. Caltrans will promptly notify the other signatory parties of its decision in writing, including a copy of the response to the objecting party. Caltrans' decision regarding resolution of the objection will be final. Following issuance of its final decision, Caltrans may authorize the action subject to dispute hereunder to proceed in accordance with the terms of that decision.
 7. Caltrans shall provide all parties to this MOA, and the ACHP, if the ACHP has commented, and any parties that have objected pursuant to section D.6 of the stipulation, with a copy of its final written decision regarding any objection addressed pursuant to this stipulation.
 8. Caltrans may authorize any action subject to objection under this stipulation to proceed after the objection has been resolved in accordance with the terms of this stipulation.
- E. Amendments. Any signatory party to this MOA may propose that this MOA be amended, whereupon all signatory parties shall consult to consider such amendment. The amendment will be effective on the date a copy signed by all of the original signatories is filed with the ACHP. If the signatories cannot agree to appropriate terms to amend the PA, any signatory may terminate the agreement in accordance with Stipulation III.F, below.
- F. Termination
1. If this MOA is not amended as provided for in section E of this stipulation, or if either signatory proposes termination of this MOA for other reasons, the signatory party proposing termination shall, in

writing, notify the other MOA parties, explain the reasons for proposing termination, and consult with the other parties for at least 30 days to seek alternatives to termination. Such consultation shall not be required if Caltrans proposes termination because the Undertaking no longer meets the definition set forth in 36 CFR § 800.16(y).

2. Should such consultation result in an agreement on an alternative to termination, the signatory parties shall proceed in accordance with that agreement.
3. Should such consultation fail, the signatory party proposing termination may terminate this MOA by promptly notifying the other parties in writing. Termination hereunder shall render this MOA without further force or effect.
4. If this MOA is terminated hereunder, and if Caltrans determines that the Undertaking will nonetheless proceed, then Caltrans shall comply with the requirements of 36 CFR 800.3-800.6.

G. Duration of MOA

1. Unless terminated pursuant to section F. of this stipulation, or unless it is superseded by an amended MOA, this MOA will be in effect following execution by the signatory parties until Caltrans, in consultation with the other signatory parties, determines that all of its stipulations have been satisfactorily fulfilled.
2. The terms of this MOA shall be satisfactorily fulfilled within ten (10) years following the date of execution by the signatory parties. If Caltrans determines that this requirement cannot be met, the MOA parties will consult to reconsider its terms. Reconsideration may include continuation of the MOA as originally executed, amendment of the MOA or termination. In the event of termination, Caltrans will comply with section F.4 of this stipulation, if it determines that the Undertaking will proceed notwithstanding termination of this MOA.
3. If the Undertaking has not been implemented within ten (10) years following execution of this MOA, this MOA shall automatically terminate and have no further force or effect. In such event, Caltrans shall notify the other signatory parties in writing and, if it chooses to continue with the Undertaking, shall reinitiate review of the Undertaking in accordance with 36 CFR Part 800.

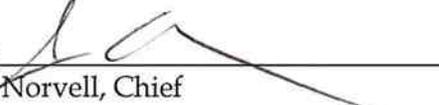

H. Effective Date

This MOA will take effect on the date that it is executed by Caltrans and the SHPO.

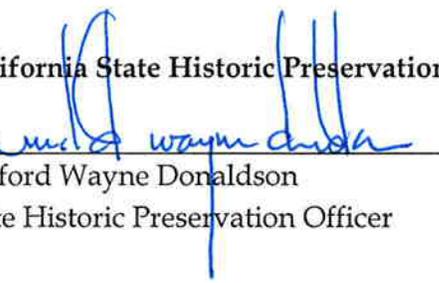

EXECUTION of this MOA by Caltrans and the SHPO, its filing with the ACHP in accordance with 36 CFR §800.6(b)(1)(iv), and subsequent implementation of its terms, shall evidence, pursuant to 36CFR§800.6(c), that Caltrans has afforded the ACHP an opportunity to comment on the Undertaking and its effects on historic properties, and that Caltrans has taken into account the effects of the Undertaking on historic properties.

FINAL MEMORANDUM

September 8, 2008

TO: Mike Brady (Caltrans)

FROM: Doug Eisinger, Deb Niemeier (UC Davis-Caltrans Air Quality Project)
Deborah Bennett (UC Davis Department of Public Health Sciences)

SUBJECT: Brief Screening-Level Review of the Draft Health Risk Assessment (HRA) for the Schulyer-Heim Bridge Replacement and SR-47 Expressway Project (Heim Bridge)

This memo updates our June 24, 2008 memorandum that responded to your request that we provide a high level review of the June 2008 Draft HRA¹ for the Heim Bridge project. There are no substantive changes between the June 24, 2008 document and this document; this memo streamlines some of the text from the June memo and clarifies that this communication is a final work product.

We have scanned the draft report and identified any obvious questions or issues regarding: travel activity, emissions, concentrations, exposure, and risk. We also had some comments regarding mitigation, using “reasonable” vs. “worst-case” modeling assumptions, and differentiating this project from other projects. The expediency with which this review was requested prohibits detailed analysis, but we have identified some issues that we believe relate to future HRAs. We strongly encourage Caltrans/U.S. Federal Highway Administration to consider a formalized effort aimed at developing a systematic framework for conducting HRAs for transportation project-level analysis. As a matter of note, all page number references cited below are to the 44-page June 2008 Draft HRA.

¹ Draft Health Risk Assessment for the Schulyer-Heim Bridge Replacement and SR-47 Expressway Project. Prepared for Alameda Corridor Transportation Authority, Carson, CA. Prepared by Weston Solutions, Inc. June 2008.

Travel Activity

- The project description text should note the beginning and ending of the construction phase and the built year. We were unable to determine when the project became operational, but assumed it was in year 2015.
- The analysis segregated traffic activity into the four time periods currently used by SCAG to model the regional transportation plan (RTP): AM peak, midday activity, PM peak, and night activity (p. 11). This approach is reasonable. It is generally considered more optimal in terms of traffic level predictions to have a greater number of modeling time periods. The UCD-Caltrans mobile source air toxics (MSAT) methodology prepared in 2006 with multi-agency input recommended, at the minimum, travel estimation for at least the peak vs. off-peak periods.
- The level of travel activity is typically the most important variable in completing air quality related project assessments. In the main body of the report, details should be expanded to include activity assumptions for the no-build and build alternatives, including fleet mix (truck percentage), volumes, and speeds. This information would be especially valuable for the main routes directly affected by the project: for Alternative 1, illustrating how truck traffic would be diverted from SR-103 to SR-47 (as described on p. 25), and how, for Alternative 2, truck traffic would be diverted from the Alameda St. corridor to SR-103 (as described on p. 25). The report employs traffic projections “from the traffic study” (p. 11); however, the genesis of this traffic study is not clear. Did this traffic study document expected traffic shifts to/from adjacent facilities and any other affected facilities such as the 110 and 710 freeways? The report also notes that traffic volumes and average daily traffic were developed using information from the Ports and from SCAG (pp. 11-12). It appears that the project analysts used travel assumptions consistent with regional analysis, which would be appropriate; however, as noted above, further documentation is needed to understand where and how the various assumptions are employed in the analysis. The traffic study should be included in the material as an appendix.
- Page 20 of the report describes how “conservative traffic assumptions” were used to create the scenarios to be analyzed. Using a conservative approach would appear to be correct in concept; however, it is critical to document assumptions, and to clearly identify how each was conservative.
- Standard milestone years for project-level air quality analysis typically include a base year, the year of project completion, and the design year (usually defined as the project completion year plus 20 years). It is not a serious problem that this analysis used different years, however the analysis years neither match the standard air quality approach, nor do they align the 70-year exposure assessment period with the years the project is operational (some of the 70 years are before the project is built, some are after the project is built). It would seem more logical to have the 70-year window begin with the year of project completion, so that the entire risk analysis would reflect no-build vs. build conditions.

Emissions

- The emissions assessment includes assumed implementation of various control programs which are part of the Ports Clean Air Action Plan (CAAP) (p. 9). For example, one of the assumptions is that 100% of trucks entering the Port by January 1, 2012 will meet 2007 federal clean truck standards (p. 9). As a general practice, the U.S. EPA typically discounts the effectiveness of control programs for planning purposes, to account for unexpected implementation delays and problems, as well as enforcement issues and other factors that can lessen effectiveness. So, for example, EPA has sometimes assumed that control programs achieve only 80% of the emission reductions that would occur if the program was fully implemented as planned. Unless the CAAP's emission reductions are federally enforceable, it would be more in keeping with standard practice to discount the anticipated effectiveness of these controls, rather than assume 100% successful program implementation. The HRA should clearly identify which control strategies are included in the analysis, which strategies are enforceable compared to those that are merely planned, and what year they are expected to be implemented.
- Alternative 1 provides for grade separations, which would generally be expected improve traffic flow and reduce emissions (p. 7).
- Use of EMFAC2007 was appropriate. It appears that the study took vehicle deterioration into account when estimating LNG vehicle emissions (p. 10), and that conservative assumptions were made about the lack of LNG truck introduction after 2011 (p. 11). Further details would be helpful to document the methodology for LNG trucks consistent with EMFAC2007 (p. 10).
- It appears that the analysis used the 2006 UCD-Caltrans MSAT methodology, which is reasonable since that methodology was the only readily-available tool during 2007 when the analysis was likely completed. Future analyses (for other projects), should use the UCD-Caltrans CT-EMFAC model, the most recent version of which is dated May 2008, since it incorporates a more robust methodology to account for MSAT emissions.
- As mentioned later under both the Risk and Mitigation sections, there is confusion about what is meant by the "mitigation scenarios" explored for 2015. Further documentation on these is necessary to understand whether the emission factors chosen to represent the mitigation scenarios were different than the other scenarios (see pp. 13, 20).
- The main report text should clarify which gasoline and diesel-related compounds are covered by the health risk assessment. The MSATs listed in the main report are recognized as priority MSATs by the U.S. Environmental Protection Agency and are appropriate compounds for analysis. Material in an appendix seemed to indicate that, beyond diesel PM, several additional diesel-related compounds were evaluated; if this is the case, this should be made clear in the main body of the report.

Concentrations

- The spacing of the receptors seemed to be appropriate to capture near-road impacts since they were spaced at 50 m intervals close to the affected facilities (p. 16).
- Overall, the dispersion modeling approach appears reasonable based on the tools used and the information provided in the main body of the report.

Exposure

- The text states that maximum 1-hour concentrations were used for acute effects. For some compounds, the acute time frame uses a slightly longer time period. In general, HRAs should match the time period of exposure and health concern (e.g., for some pollutants, the reference dose should be compared to a maximum six or seven hour concentration). We did not check the time frames for the pollutants under consideration. The Hazard Index (HI) will only go down if longer time periods are used. The text should state the time-frames of interest for all the pollutants evaluated.
- The breathing rate needs to be confirmed. Using the parameters listed for the Gamma distribution in OEHHA's 2003 "Air Toxics Program Risk Assessment Guidelines"², along with Crystal Ball software, we derived an 80th percentile value of 393.9 L/kg-day. The guidelines list a high-end value of 393 L/kg-day, which matches the 80th percentile value we calculated. However, the analysis done in the report we are evaluating states that the 80th percentile value is 302 L/kg-day. This value should be revised upwards. The discrepancy may be that the 302 L/kg-d comes from an estimate of the adult breathing rate. The value presented for use by OEHHA (2003) assumes a 70-year exposure beginning in childhood, such that the higher breathing rates for children's early years are incorporated into the estimate for the entire lifetime. The OEHHA guidance value should be used.
- The OEHHA guidance also states, "The risk assessment guidelines require the use of the 95th percentile (i.e., high-end) breathing rate for all assessments of cancer risk by the inhalation route in Tier-1 risk assessments in order to avoid underestimating risk to the public, including children." The potential discrepancy between the listed "high-end" value in the report, which appears to be the 80th percentile, and the OEHHA guidance, should be resolved by following OEHHA guidance.
- The breathing rates for the workers should also be confirmed once the residential breathing rate has been established.
- The concentrations do not consider potentially lower indoor air concentrations for some of the particle bound species. By not including this factor, the concentrations are more conservative than they need to be. However, given the temperate climate in the Long Beach area, doors and windows may be open a considerable fraction of time, in which case the conservative approach is appropriate.

Risk

- (see also first bullet comment below under Mitigation) The text on pages 20 and 23 is confusing – it seems to imply that, in addition to the build vs. no-build scenarios, there were other sensitivity analyses done for year 2015. However, the text on p. 24 notes that these sensitivity analyses were simply build vs. no-build comparisons. The final document should clarify the analyses discussed.
- The modeling time period was 2003 to 2072, which is said to be “for purposes of CEQA comparison.” The baseline assumes no project construction, and the project scenarios assume project emissions from the year 2015 onward (page 13). The linear extrapolation is from 2003 to 2015, and from 2015 to 2030. It is not made clear if the HRA assumed a “baseline” version of 2015 for the first averaging period, and a “project” version of 2015 for the second averaging period. As we state elsewhere, it was also not clear which control programs (mitigation) were assumed to be operative in the no-build and build scenarios. Also, as stated above, a broader concern is that, ideally, we would want to make risk comparisons beginning at the time period the project was completed, and extending for 70 years from that time point.
- There are two issues with the presentation of the HI results. First: South Coast Air Quality Management District (SCAQMD) guidance³ does indicate that the standards for a project are increases in the HI of less than 1.0. Also necessary to determine, however, is if the project pushes the exposed population from below 1.0 to above 1.0. Second: from the report, we cannot determine the value of the ultimate HI. A look through the appendices does not clear up the issue either as it is not clear if the values presented are the HI considering all sources of exposure, or just the difference between the baseline and the project scenarios.
- The report notes that the results show “substantial regional benefits that reduce risk in the majority of the study area” (p. 34). The figures shown, however, only highlight the geographic areas where risk decreases and increases, thus it is hard to see (quantitatively) what the population-weighted risk impacts are. This information needs to be documented better.
- The actual risk values should be stated in a clear and visible manner in the main body of the report, preferably in the executive summary. Without reading Table 3.1, it is possible to have the impression that the exposed population meets all regulatory guidelines in the no-build situation. In fact, their no-build risk is already above 1×10^{-4} , the level at which action should be taken in most regulatory guidelines. While it is true that this proposed project comes very close to meeting the guidelines for the allowed increase of less than 10 in a million, this increase should be placed in context of the existing, no-build risk conditions.

³ See: <http://www.aqmd.gov/CEQA/handbook/signthres.pdf>.

- The discussion (beginning p. 34) identifies factors that could contribute to over-estimating the risk impacts. Some points merit further discussion. The first bullet statement notes that actual goods movement activity may be less than what is forecasted, thus reducing activity and risk. Presumably, the premise for the entire project is the need to satisfy future goods movement demand – if that demand has been over-predicted, then the basis for the entire project is in question. We recommend removing the bullet. The second bullet statement on page 34 includes helpful comments about the fact that future controls may be implemented that are not yet credited; however, as discussed under the “Emissions” section, it would be more appropriate to discount the assumed effectiveness of the Ports CAAP.
- The risk discussion would benefit by including information describing the conservative nature of the risk assessment process, including, for example, the approach used to establish unit risk factors and the analytical process of assuming 70-year exposures regardless of the low probability of individuals remaining in one location for 70 years. That would help provide the general public with some context to understand how to interpret the risk results.
- The individual pollutants and the exposure pathways used to complete the analysis should be stated in the main body of the report. Currently, some of this is documented in an appendix, and some is mentioned in the text, but it is difficult to identify. Our assumption is that the modeled risk is largely a function of diesel PM exposure via inhalation. It would be helpful, especially to inform how to structure future HRAs, to break down the attribution of risk by pollutant, and by exposure route. If, as expected, virtually all of the health risk is due to diesel PM, and by inhalation, documenting these results would help encourage streamlining future HRAs to eliminate analytical work with little informational value.

Mitigation

- *(See also the first bullet point above under Risk)* There is a discussion under Section 2.3 (Risk Assessment Approach, p. 20) which refers to a year 2015 “mitigation scenario.” It is not clear what this means. It appears that year 2015 risks were estimated for the purpose of identifying homes impacted, and to help identify homes that would be candidates for mitigation (as described later on p. 35). Is this correct? How does this information compare to the risk information presented in Table 3-1? Also, the page 20 text creates some confusion about the assumptions for all of the no-build vs. build analyses. Page 20 states that year 2015 analyses were based on known emission reduction strategies as the basis for mitigation. It was not clear whether all the build scenarios were modeled with the known emission reduction strategies, or just the ones for the 2015 analysis. The text on p. 20 implies that the mitigation was used only for 2015, but on page 9, it said the Ports CAAP was assumed for both 2015 and 2030. Was there some mitigation other than the Ports CAAP also assumed for 2015? Also, the text on page 35 refers to the sensitivity analysis results in Figure 4-1; that figure is not included.
- The mitigation discussion (p. 35) describes approximately 12 homes as meriting mitigation, and expanding that pool of homes to 100 to 200 to provide a safety buffer and ensure anonymity of the impacted receptors. The justification seems understandable, but the

impact – raising the number of sites to be mitigated by a factor of about 10 to 15 – seems overly high. Given the conservative nature of risk assessments (see comment under Risk above), margins of safety are already built into the analysis. The need for mitigation, and the geographic coverage for such mitigation, should be further examined.

- The choice of mitigation (p. 36) requires further discussion and documentation. HVAC system effectiveness can be easily defeated simply by opening windows or doors. The socio-economic status of these residents also needs to be considered as they are likely to minimize HVAC use if operational cost is prohibitive. For HVAC improvements to be an effective mitigation, some consideration needs to be given to ensuring that adequate resources are available to pay for ongoing HVAC system maintenance as well as the monthly bills that would be incurred due to HVAC operation. If, however, HVAC system improvements need only be effective for a small fraction of the year to reduce risk below the target level, that information should be described. Alternatively, other mitigation could be examined if the HVAC systems prove impractical. For example, there is some literature that shows that tree screens (particular species of trees) have successfully reduced ambient PM levels. If tree-planting is a practical solution for the affected sites, that option could be explored as well.

Minor / Miscellaneous Issues

- Page 5 of the report describes Alternative 1 as replacing the existing bridge with a “slightly wider” new bridge – we assumed that the new structure did not increase capacity by adding travel lanes, since the text focused on the addition of standard shoulders. If that is not the case, the text should be clarified.

Broader HRA Discussion Points

1. Differentiating Project Types: Which Projects Merit Assessment?

Separate from the Heim Bridge project assessment, you have asked us for thoughts concerning which types of projects might be more appropriate for HRAs. Since there is no regulatory requirement to prepare an HRA for transportation projects, there are no uniform procedures for completing such assessments, for interpreting the results obtained, or for communicating the findings to the public in a meaningful way. In the Heim Bridge analysis, this has resulted in, for example, confusing analysis years, lack of understandable travel activity and modeling assumptions, and other issues as discussed above. We highly recommend that Caltrans consider implementing a study in which a small number of project-level HRAs are completed by a qualified team, using different analytical approaches for each of the analyses. The various approaches and results can then be compared and assessed as to their explanatory value, as well as the time and cost involved with their preparation. We believe that this process will also help to establish the outlines of a broader HRA analysis framework for transportation projects that can be used to gather multi-agency input, and to gain consensus from other regional, state and federal partner agencies on the need for these studies and the usefulness of different HRA options.

Diesel PM is the risk driver in the Heim Bridge case (p. 36) as well as in other California communities (e.g., see findings from the MATES-II and III studies). Accordingly, one option for selecting candidate projects for HRA pilot studies is to examine project situations involving an unusually high percentage of diesel traffic. Also, given the literature on near-road pollutant concentrations, study candidates could include cases where there are residential areas and schools in close proximity (e.g., within 100 m) to a project. For example, projects facilitating increased goods movement through ports, where environmental justice and community concerns are high, would be good candidates to explore how to implement HRAs and to pilot test what risk information is of most value to assist public involvement in the project selection process.

2. Worst-Case vs. Real-World Analyses

Independent of the Heim Bridge project, you also asked for thoughts concerning how to estimate risk when completing HRAs; in particular, you asked whether such assessments should focus on using worst-case or real-world assumptions. OEHHA guidance⁴ for hot-spot analyses recommends using a tiered approach to risk assessment, and such an approach might be applicable for transportation projects as well. In concept, tiered analyses begin by using conservative assumptions to facilitate screening assessments; if a project passes a simplified conservative screening test, the analysis is complete. Projects that fail an initial screening test can move to the next tier of analysis, which can involve replacing default screening assumptions with site-specific conservative information. Projects failing second tier review then move to more detailed assessment involving distributions for input data. A tiered approach would be consistent with other project-level analysis protocols, such as the carbon monoxide protocol developed for Caltrans by UC Davis.

In addition, HRAs could also consider presenting population-weighted risk impacts as well as site-specific impacts. OEHHA guidance, for example, recommends that hot-spot analyses assess population risk. A population risk analysis often includes two approaches. One approach involves estimating total cancer burden across the population – in other words, the increased number of excess cancers that are forecasted to occur across the population as a whole. A second approach involves estimating cancer risk by specifying the size of population at a given level of risk. From a more practical standpoint, this can be done as the number of people exposed to concentrations that result in excess cancer risks of less than 1 per million, 1-10 per million, 11-20 per million, and so on. The first approach details total risk. The second approach allows for greater resolution – enabling analysts to understand whether the absolute number of excess cancers is derived from a small pool of highly exposed individuals, or a large pool of people exposed to relatively lower concentrations and risk. In addition, OEHHA recommends presenting two sets of risk values: one set using conservative, high-end exposure assumptions (e.g., 80th or 95th percentile values for exposure), and a second set using average exposure factors.

In summary, a general approach for completing HRAs might include steps such as the following:

- As a first-tier screening approach, calculate increased risk using high-end, conservative values (higher concentrations and longer exposure periods). Present the actual risk

⁴ (See OEHHA guidance available at footnote 2 Internet address.)

numbers in addition to the change in risk. Determine whether there are homes/receptors exceeding incremental additional risk criteria. If there are, then:

- As a second-tier approach, reassess increased risk for the affected receptors using site specific conservative values, rather than general conservative values.
- For context, reassess the increased risk for the affected receptors using typical values, rather than conservative values.
- Once this suite of information is available, project sponsors can then evaluate whether mitigation is warranted, or whether further analytical work is needed. If they do not feel they can move forward on the project with the results obtained, they might conduct additional analysis; for example:
 - Present the overall population-based impact of the project by summing the change in risks over the population, especially if risk is reduced for a significant portion of the population.
 - Conduct an uncertainty analysis to provide the likely range of expected impacts, rather than just point estimates. The HARP⁵ tool, for example, has an option for Monte Carlo simulation that could assist with such analyses.

In closing, in our judgment, we believe it is premature to define a specific HRA analytical approach for transportation projects. Since relatively little work has been done to establish uniform transportation project-level HRA procedures, we do not believe the Heim Bridge approach should be used as a template for future analyses. Instead, we believe a better technical approach would be to complete several HRAs, compare them, and then assess their relative merits. Comparisons of pilot results will provide insight on whether HRA analyses should be completed, what project types they should apply to, and how to structure them assuming they are valuable.

Attention: Andrew Yoon, Senior Transportation Engineer

Dear Mr. Yoon:

SUBJECT: Project-Level Conformity Redetermination for the SR-47 Expressway: Schuyler Heim Bridge Replacement Project

On April 29, 2009, the California Department of Transportation (Caltrans) submitted to the Federal Highway Administration (FHWA) a request for the project-level conformity redetermination for the State Route 47 Expressway: Schuyler Heim Bridge Replacement Project pursuant to 23 U.S.C. 327(a)(2)(B)(ii)(1). The project is in an area that is designated nonattainment or maintenance for ozone, coarse particulate matter (PM₁₀), fine particulate matter (PM_{2.5}), carbon monoxide (CO), and nitrogen dioxide (NO₂).

FHWA originally issued a project-level conformity determination for this project on January 21, 2009. Since then, the PM₁₀ hot-spot analysis has been updated in accordance with the FHWA and Environmental Protection Agency (EPA) guidance, *The Transportation Conformity Guidance for Qualitative Hot-Spot Analyses in PM_{2.5} and PM₁₀ Nonattainment and Maintenance Areas* (March 29, 2006).

The project-level conformity analysis submitted by Caltrans indicates that the project-level transportation conformity requirements of 40 C.F.R. Part 93 have been met. The project is included in the Southern California Association of Government's (SCAG) currently conforming *2008 Regional Transportation Plan (RTP)*, and the *2008 Regional Transportation Improvement Program (RTIP)*. The current conformity determinations for the RTP and RTIP were approved by FHWA and the Federal Transit Administration (FTA) on January 14, 2009. The design concept and scope of the preferred alternative have not changed significantly from those assumed in the regional emissions analysis.

**MOVING THE
AMERICAN
ECONOMY**

Based on the information provided, FHWA finds that the Conformity Determination for the State Route 47 Expressway: Schuyler Heim Bridge Replacement Project conforms to the State Implementation Plan (SIP) in accordance with 40 C.F.R. Part 93.

If you have any questions pertaining to this conformity finding, please contact Aimee Kratovil, FHWA Air Quality Specialist, at (916) 498-5866.

Sincerely,

/s/ Aimee Kratovil
