Artist Renderings of Patrick Creek Narrows, Location 2

Many options are possible at this location. For full descriptions of all alternatives, please see the draft environmental document. These renderings depict different bridge replacement options downstream of the existing bridge. The same bridge types could be built upstream of the existing bridge with the addition of a retaining wall. Another option includes preservation of the existing bridge with the addition of a retaining wall.

Existing Bridge

Arch Bridge with Wall

Arch Bridge with Viaduct

Box Girder Bridge with Wall

Box Girder Bridge with Viaduct
