

Lake 29 Improvement

FACT SHEET

The Project

This project will widen a 3-mile section of Route 29 from two lanes to a four-lane divided highway with access control. The project is located between the communities of Lower Lake and Kelseyville in Lake County.

Benefits

The current 2-lane highway has at-grade intersections, narrow shoulders, and does not have the capacity to safely and effectively handle the anticipated growth in traffic. A four-lane expressway with access control will be able to handle anticipated growth, will increase safety, and it will encourage through truck traffic to use the southern corridor around Clear Lake.

Status

The final environmental document was completed November of 2016.

Costs

The current estimate to construct the 3-mile section of expressway is \$68 million.

Schedule

Begin Construction: Summer 2019
Project Completion: Fall 2022
