PROJECT FACT SHEET
Livingston Southbound Median Widening
Southbound State Route 99 (SR-99)
Hammatt Avenue Overcrossing to Merced/Stanislaus County Line

LOCATION MAP:

PROJECT DESCRIPTION:
The Livingston Southbound Median Widening Project consists of the construction of one freeway lane within the median in the southbound direction on SR-99, beginning just south of Hammett Avenue Overcrossing, and ending just past the Merced/Stanislaus County line in Merced County. The original project included widening in both the southbound and northbound directions, however, it was split into two projects to phase the overall project.

PURPOSE AND NEED:
The need for the project is to address freeway capacity restrictions within the study limits, which is anticipated to reach or exceed existing capacity on or before the year 2030. Additionally, since the freeway on either end of the project is already widened to three lanes in each direction, this section of freeway is not consistent with the route concept/development and it is a bottleneck for freeway users. Thus, the purpose of the project is to add capacity to SR-99 by adding an additional lane within the median.

FUNDING SOURCE:
The total project cost is estimated at $35 million and is funded with the Interregional Transportation Improvement Program under the 2014 State Transportation Improvement Program (STIP).
CURRENT SCHEDULE:  
Approved Construction Contract  
Start of Project  
Project Completion  

Date:
Summer 2019  
Summer 2020  
Summer 2020

PROJECT STATUS:  
The project is in design and review phase.
